8. Site Plan Detail – 1201 North Broadway – Proposed Broadway Junction Location

Executive Summary

Aerial Rapid Transit Technologies LLC (ARTT) contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the proposed Los Angeles Aerial Rapid Transit Project (proposed Project) that would connect Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system in Los Angeles, Los Angeles County, California. This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13). Exceptions to, or deletions from, this practice are described in this report.

The proposed Project would commence adjacent to LAUS and El Pueblo de Los Angeles (El Pueblo) and terminate at Dodger Stadium. The proposed Project would be approximately 1.2 miles, and includes three passenger stations, a non-passenger junction, and cable-supporting towers at various locations along the alignment. The proposed Project alignment would generally be in the public right-of-way (ROW), following Alameda Street and then continuing along Spring Street in a northeasterly direction through the community of Chinatown to the southernmost corner of the Los Angeles State Historic Park. The alignment would then continue northeast over the western edge of the Los Angeles State Historic Park and the Los Angeles County Metropolitan Transportation Authority (Metro) L Line (Gold) to the intersection of North Broadway and Bishops Road. At this intersection, the proposed Project alignment would turn and continue northwest following Bishops Road toward its terminus at Dodger Stadium, in the Elysian Park community. The proposed Project "alignment" is defined as the length and width of suspended above-grade cables and cabins following the position of the Project components along the aerial rapid transit (ART) route from Alameda Station to Dodger Stadium Station.

Project Site Visits

Observations of the proposed Project alignment, adjacent properties, and public ROWs were made from existing ROWs and other publicly accessible areas during a site visit on March 18, 2020. A follow-up site visit of the 1201 North Broadway property that comprises the location of the proposed Broadway Junction was conducted on September 30, 2020, with an updated site visit conducted on May 6, 2022. The 1201 North Broadway property consists of four adjacent and contiguous parcels of land totaling approximately one acre that are designated by the Los Angeles County Office of the Assessor as Assessor Parcel Numbers (APNs) 5414-021-001, 5414-021-007, 5414-021-008, and 5414-021-021. The 1201 North Broadway property is currently developed with an approximately 26,000-square-foot commercial/office building, an asphalt-paved surface parking lot, and an exterior courtyard area. The original 1201 North Broadway building was constructed in 1924 on a portion of APN 5414-021-007 for use as an automotive sales and service dealership, with building additions constructed to the north on APN 5414-021-001, and to the east on APN 5414-021-007 in 1937 and 1946, respectively; the three buildings were joined together. The 1201 N Broadway building was renovated for its current commercial office use in approximately 2003. APN 5414-021-001 also includes an exterior courtyard area and an unpaved portion that is used as an outdoor space for tenants of the commercial office building. A pad-mounted transformer owned by Los Angeles Department of Water and Power (LADWP) and two storm drains were observed in the northern exterior courtyard area. APNs 5414-021-008 and 5414-021-021 consist of an asphalt-paved surface parking lot associated with the commercial office building (i.e., 1201 North Broadway building). Small quantities of paints and paint-related supplies were observed stored in the architectural woodshop of the 1201 North Broadway building, and janitorial supplies and some paints were observed stored in a janitorial closet. No staining or other environmental concerns were noted in these areas.

No visual evidence of aboveground storage tanks (ASTs), underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable or irrigation water wells, monitoring wells, dry wells, oil/gas wells, clarifiers, septic tanks, or leach fields was identified in the area of the proposed Project alignment, except for groundwater monitoring wells in the immediate vicinity of the Los Angeles State Historic Park (proposed Chinatown/State Park Station location), as identified based on a review of the online GeoTracker database and May 6, 2022 site visit. No dry cleaners were identified in the immediate vicinity (i.e., 500 feet) of the proposed Project alignment. Two gas stations were observed in the immediate vicinity,

including a Chevron gas station (901 North Alameda Street) and a compressed natural gas (CNG) fueling station (1055 North Alameda Street). No other off-site sources of environmental concern were identified in the immediate vicinity of the proposed Project.

Site History

The earliest source of historical information reasonably ascertainable in which usage could be determined was from Sanborn Fire Insurance Maps dated 1888. Based on review of the Sanborn maps, the area of the proposed Project was depicted as predominately developed with mixed-use residential, commercial, and light industrial uses, including railroad tracks on the Los Angeles State Historic Park property and along Alameda Street. Between approximately 1900 and 1928, the area of the proposed Project had a notable increase in development density. In approximately 1938, the historical Los Angeles Union Passenger Terminal was shown as under development in the area of the proposed Alameda Station, the southern terminus of the proposed Project. In approximately 1952, grading activities were shown in the area of the present-day Dodger Stadium, the northern terminus of the proposed Project. According to online research, Dodger Stadium opened in 1962, which was confirmed by the 1964 Sanborn map, which depicts the stadium as developed. From approximately 1989 through 1994, portions of the historical railroad tracks of the Southern Pacific Railroad Company's (SPRR) Freight Yards, in both the area of the present-day vacant lot (924 North Spring Street) and the present-day Los Angeles State Historic Park property, were undergoing decommissioning. In approximately 2002, the historical railroad tracks were decommissioned and removed, and the present-day Metro L Line (Gold) was shown as developed. From approximately 2009 through 2012, the present-day Los Angeles State Historic Park appeared as under development.

Based on AECOM's historical review of property uses in the proposed Project, one use of environmental concern was identified at 1201 North Broadway (proposed Broadway Junction location), and the historical use of that property is discussed further. As early as the 1890s, the 1201 North Broadway property was developed as residential use. Circa 1924, a portion of the 1201 North Broadway property was redeveloped with an automotive dealership that operated until 2003, when the property was renovated for commercial office use. Former operations of the automotive dealership on the 1201 North Broadway property included a sales office/showroom; an auto body shop with a paint spray booth and paint storage; a service area with a three-stage clarifier, in-ground hydraulic lifts, a parts washer, new oil ASTs, and a compressor room; an exterior 1,000-gallon gasoline AST and associated gasoline pump island; and the use of a 1,000-gallon gasoline UST beneath the sidewalk along North Broadway, and a 200-gallon waste oil UST inside the service shop. The former USTs were removed in the 1990s; at the time of removal, soil sampling was reportedly conducted, but no formal closure was issued by the Los Angeles Fire Department (LAFD) at that time. Additional soil sampling was conducted in the area of the former USTs between 1999 and 2001, during which low levels of total petroleum hydrocarbons (TPH) were detected (maximum concentration of 970 milligrams per kilogram [mg/kg]) only in the area of the former gasoline UST. The LAFD subsequently issued a No Further Action (NFA) letter, dated November 21, 2001, for the former USTs.

In 2003, Ninyo & Moore completed a Phase I ESA of the 1201 North Broadway property, which identified multiple recognized environmental conditions (RECs) associated with the former automotive dealership. Ninyo & Moore subsequently conducted a subsurface soil investigation in 2003 to investigate potential subsurface impacts from the former automotive dealership. Twenty-five soil borings were advanced at the 1201 North Broadway property, and soil samples collected were analyzed for one or more of the following: TPH, volatile organic compounds (VOCs) including benzene, toluene, ethylbenzene and xylenes (BTEX), methyl tert-butyl ether (MTBE), and/or metals. TPH (C23-C36 range) was detected in the soil borings collected from the area of the former in-ground hydraulic lifts at concentrations ranging from 10 mg/kg to 27,000 mg/kg at depths of approximately 10 to 20 feet below ground surface (bgs). Bedrock was reported to be present at approximately 15 to 20 feet bgs; therefore, Ninyo & Moore reported that the extent of heavy petroleum hydrocarbons in soil appeared to be limited to the immediate vicinity of the two hydraulic lifts; therefore, it was left in place. The TPH impacts to soil left in-place at the 1201 North Broadway property in the area of the former lifts are considered to present a REC to the proposed Project and the proposed Broadway Junction location.

In 2003, laboratory results also indicated concentrations of TPH as gasoline (TPH-g) at 37 to 150 mg/kg at 18 to 20 feet bgs, toluene at 22 micrograms per kilogram [µg/kg] at 20 feet bgs, ethylbenzene at 160 to 710 µg/kg at 18 to 20 feet bgs, and xylene at 347 to 2,400 µg/kg at 18 to 20 feet bgs in soil samples collected in the vicinity of the former gasoline UST under the sidewalk along North Broadway. Based on these results and the results from previous investigations (discussed above), Ninyo & Moore concluded that the concentrations appeared to be limited to the immediate area of the former gasoline UST and appeared to be low, and in their opinion would not be of concern to a regulatory agency. Since closure had been granted by the LAFD in 2001 for the former gasoline UST, Ninyo & Moore stated that no further action regarding the former gasoline UST was warranted. AECOM concurs with Ninyo & Moore's conclusion; however, it should be noted that as part of the proposed Project for the Broadway Junction, although the maximum depth of excavation is only 7 feet bgs, the maximum depth of utilities is up to 10 feet bgs, and the maximum depth of drilled piles at the Broadway Junction is 120 feet below pile depth. Therefore, residual petroleum hydrocarbons may be encountered in the area of the former gasoline UST and the former hydraulic lifts with the demolition of the building at the 1201 North Broadway property as part of the proposed Project for construction of the Broadway Junction.

In 2017, an Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for a potential mixed-use redevelopment project of APNs 5414-021-007, 5414-021-008, and 5414-021-021 of the 1201 North Broadway property (proposed Broadway Junction location), which was approved by the City of Los Angeles. The IS/MND prepared for the project noted two mitigation measures in regard to hazards and hazardous materials at the property, including preparation and implementation of a site-specific Health and Safety Plan in accordance with federal and State OSHA regulations and preparation and implementation of a Soil and Groundwater Management Plan that specifies the method for handling and disposal of contaminated soil and groundwater prior to demolition, excavation, and/or construction activities.

Arcadis U.S., Inc. (Arcadis) prepared a Draft Phase I ESA report of the 1201 North Broadway property (proposed Broadway Junction location) in February 2019. Arcadis' observations were similar to AECOM's at the time of the 2020 and 2022 site visits. Although Arcadis identified de minimis and non-ASTM conditions (i.e., potential remnant septic systems, potential deposition of airborne contaminants over time, location in a methane zone or methane buffer zone, potential presence of asbestos and lead-based paint), Arcadis identified no controlled RECs (CRECs) or historical RECs (HRECs) in connection with the 1201 North Broadway property. Arcadis identified the detectable concentrations of TPH in soil for the 1201 North Broadway property as a REC, but concluded that the concentrations were low and unlikely to warrant regulatory oversight. Arcadis recommended that, should the impacted soil be excavated and removed from the property, special handling be required, and recommended that a Soil Management Plan (SMP) be developed.

Database Review

The environmental database report search identified five properties in the proposed Project: LAUS and El Pueblo, which are the proposed locations for vertical circulation elements for the Alameda Station; 901 North Main Street, which is the proposed location of the Alpine Tower; the Los Angeles State Historic Park property, which is the proposed location of the Chinatown/State Park Station; and the 1201 North Broadway property, which is the proposed location of the Broadway Junction.

LAUS (proposed location for construction support space and vertical circulation elements for the Alameda Station) was identified in multiple compliance-related databases, as well as the Cleanup Program Sites-Spills, Leaks, Investigations, and Cleanups (CPS-SLIC) database. The CPS-SLIC case status is reported as closed as of August 16, 1996. A memorandum dated August 16, 1996, reviewed on the online GeoTracker database, states that soil impacted with TPH (maximum of 4,000 parts per million [ppm]) was used for soil reuse on the property under the Regional Water Quality Control Board's (RWQCB's) approval in 1990, and the case was closed. No additional information was available on the online GeoTracker database. Based on the regulatory status (i.e., case closure), this site is not considered to present a REC to the proposed Project.

El Pueblo (proposed location for construction support space and vertical circulation elements for the proposed Alameda Station), on the western side of Alameda Street, was identified in the US Brownfields database, which indicates that a Phase I ESA was completed in 2018 to 2019. No additional information is reported. Based on the lack of listing in other databases indicating further regulatory action required (i.e., EnviroStor, GeoTracker) and/or a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.

The 901 North Main Street property (proposed location of the Alpine Tower) was identified in several compliance-related databases, as well as the United States (U.S.) Brownfields database, which is maintained by the U.S. Environmental Protection Agency (USEPA). This property is currently occupied by a paved parking lot under the elevated Metro L Line (Gold) structure. The U.S. Brownfields database reports that a Phase I ESA was conducted at this property in 2018 to 2019. No additional information is reported. Based on the lack of violations and/or listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.

The EnviroStor database, which is an online data management system maintained by the California Department of Toxic Substances Control (DTSC), reports that Los Angeles State Historic Park (proposed location for the Chinatown/State Park Station) entered into a Voluntary Cleanup Program (VCP) with the DTSC in 2001, and remedial action (soil removal) was completed in 2003. However, according to a *Supplemental Remedial Action Workplan Memorandum* prepared by Group Delta Consultants, Inc. in 2015, during construction of Los Angeles State Historic Park in 2014, arsenic and lead contamination was encountered in near surface soils above the established site-specific clean-up goals. Based on available information on the online EnviroStor database, a complete soil removal action report has yet to be completed for the entire Los Angeles State Historic Park property; however, it appears from the Workplan Memorandum noted above that the soil removal action has been completed in selected portions of the park site. According to a *Proposed Soil Removal Locations* map dated 2014, included as an attachment to the Workplan Memorandum, it does not appear that soil removal action was required in the area of the proposed Chinatown/State Park Station based on the established site-specific clean up goals. Based on this information, the soil impacts associated with the former use of the Los Angeles State Historic Park are not considered to represent a REC to the proposed Project. However, it should be noted that residual contamination may be encountered during the proposed Project, which can be managed under a SMP.

Additionally, the Los Angeles State Historic Park property (proposed location for the Chinatown/State Park Station) is listed with an open-verification monitoring status in the CPS-SLIC database as of 2010. Based on review of documentation available on the online GeoTracker database, which is a data management system maintained by the State Water Resources Control Board (SWRCB), an annual groundwater monitoring program was first implemented in August 2000 at the request of the Los Angeles RWQCB. The *2021 Annual Groundwater Monitoring Report and Request for No Further Action prepared* by Arcadis U.S., Inc. (Arcadis) was the most recent monitoring report available on GeoTracker (dated January 2022), and at that time, depth to groundwater at the park site ranged from 27.95 feet bgs to 60.07 feet bgs. The annual report stated that concentrations of fuel-related petroleum hydrocarbons and BTEX had generally decreased compared to the previous annual groundwater monitoring events; however, concentrations of benzene were detected above the California maximum contaminant level (MCL) in well BMW-4, which is greater than ¼ mile upgradient of the proposed location for the Chinatown/State Park Station. In addition, benzene was detected slightly above the MCL in well BMW-6 at a concentration of 2.14 micrograms per liter (µg/L) (duplicate sample at 2.31 µg/L), which is approximately 450 feet downgradient from well BMW-4; benzene had not been detected in this well above the MCL during previous annual monitoring events since 2016. The 2021 annual report did not specifically discuss that the benzene concentration detected in well BMW-6 was above the MCL, but stated that BTEX concentrations in groundwater had shown a generally decreasing trend and the area of remaining dissolved phase gasoline-range impacts to groundwater were stable given the long-term monitoring concentration trends. Based on the analytical results, it is AECOM's opinion that the newly detected benzene concentration in well BMW-6 indicates that the plume may be migrating downgradient towards the proposed Project. Based on maps included in the 2021 Annual Report, the groundwater monitoring wells in close proximity to the proposed Chinatown/State Park Station are MW-2 and MW-19, which were not sampled during the annual monitoring event. Based on this information and the lack of current groundwater data in the area of the

proposed Chinatown/State Park Station, the groundwater impacts associated with the former use of the Los Angeles State Historic Park are considered to represent a REC to the proposed Project. It should be noted that as part of the proposed Project, the maximum excavation depth in the area of the proposed Chinatown/State Park Station is to approximately 10 feet bgs, and the maximum depth of drilled piles is 80 feet below pile depth. Based on the anticipated depth to groundwater, it is considered unlikely that groundwater would be encountered during construction of the foundations for the Chinatown/State Park Station; however, because the proposed piles at this station would be drilled to 80 feet below pile depth, removal of nuisance water (water that seeps into boreholes) during construction may be required. Should impacted groundwater be encountered during construction of the proposed Project, groundwater can be managed under a Groundwater Management Plan. Furthermore, it is not anticipated that the groundwater monitoring wells in the Los Angeles State Historic Park property would be restricted during construction activities of the Chinatown/State Park Station, and would remain accessible during and after construction activities.

The 1201 North Broadway property (proposed location of the Broadway Junction) is listed with a completed-closed leaking UST (LUST) case as of 2001 in the environmental database report and the online GeoTracker database maintained by the SWRCB. This listing is associated with the former USTs discussed above that were issued closure by the LAFD.

A number of additional surrounding sites were identified in the environmental database report search. However, the majority of these sites were listed in non-contamination-related databases. Based on AECOM's review and analysis of the database listings, none of these additional surrounding sites are expected to present a REC to the proposed Project, based on their distance (i.e., greater than 500 feet), regulatory status (i.e., regulatory closure, no violations found), media impacted (i.e., soil only), and/or topographical position relative to the proposed Project (i.e., downgradient or cross-gradient).

Conclusions and Recommendations

Based on the above-described activities, the following RECs were identified in connection with the proposed Project:

- The historical review revealed that railroad tracks were present along the center of Alameda Street in the area of the proposed Project from at least 1888 through 1970, based on the Sanborn maps. In addition, several spur tracks were apparent in area of the planned LAUS Forecourt in the 1923 and 1928 aerial photographs, which is one of proposed locations for the vertical circulation elements and queuing areas to the Alameda Station. Portions of the tracks may remain beneath pavement or may have been removed from these areas. The potential presence of hydrocarbons, metals, and persistent pesticides in soil along or adjacent to the railroad track alignment represents a REC to the proposed Project.
- In 2003, Ninyo & Moore collected soil samples at the 1201 North Broadway property (proposed Broadway Junction location) to investigate potential subsurface impacts from a former automotive dealership. TPH was detected in the area of the former hydraulic lifts at concentrations ranging from 10 to 27,000 mg/kg at depths of 15 to 20 feet bgs, and TPH-g and BTEX were detected in the area of the former gasoline UST at concentrations ranging from at 37 to 150 mg/kg at 18 to 20 feet bgs and 22 to 2,400 µg/kg at 18 to 20 feet bgs, respectively. Due to the localized and/or limited nature of the concentrations, in 2003, at the time of their investigation, Ninyo & Moore recommended no further investigation or remediation. AECOM concurs with Ninyo & Moore's conclusion; however, it should be noted that as part of the proposed Project for the proposed Broadway Junction, although the maximum depth of excavation is only 7 feet bgs, the maximum depth of utilities is up to 10 feet bgs, and the maximum depth of drilled piles at the Broadway Junction is 120 feet below pile depth. Therefore, residual petroleum hydrocarbons may be encountered in the area of the former hydraulic lifts and the gasoline UST with the demolition of the building at the 1201 North Broadway property as part of the construction of the proposed Broadway Junction. Therefore, the TPH impacts to soil left in-place at the 1201 North Broadway property are considered to present a REC to the proposed Project.

- Annual groundwater monitoring has been ongoing at the Los Angeles State Historic Park (proposed Chinatown/State Park Station location) since 2001, at the request of the RWQCB. The 2021 Annual Report was the most recent monitoring report available on GeoTracker (dated January 2022); and at that time, depth to groundwater at the park site ranged from 27.95 feet bgs to 60.07 feet bgs. The annual report stated that concentrations of fuel-related petroleum hydrocarbons and BTEX had generally decreased compared to the previous annual groundwater monitoring events; however, concentrations of benzene were detected above the California MCL in well BMW-4, which is located greater than ¼ mile upgradient of the proposed location for the Chinatown/State Park Station. In addition, benzene was detected above the MCL in well BMW-6, which is located approximately 450 feet downgradient from well BMW-4; benzene had not been detected in this well during the previous annual monitoring events since 2016. The 2021 annual report did not specifically discuss that the detected concentration of benzene in well BMW-6 was above the MCL, but stated that BTEX concentrations in groundwater had shown a generally decreasing trend and the area of remaining dissolved phase gasoline-range impacts to groundwater were stable given the long-term monitoring concentration trends. Based on the analytical results, it is AECOM's opinion that the newly detected benzene concentration in well BMW-6 may indicate that the plume may be migrating downgradient towards the proposed Project. Based on maps included in the 2021 Annual Report, no groundwater monitoring wells appear to be located within the proposed construction area for the proposed Chinatown/State Park Station and the groundwater monitoring wells in close proximity to the proposed Chinatown/State Park Station are MW-2 and MW-19, which were not sampled during the 2021 annual monitoring event. Based on this information and the lack of current groundwater data in the area of the proposed Chinatown/State Park Station, the groundwater impacts associated with the former use of the Los Angeles State Historic Park are considered to represent a REC to the proposed Project.

The following HREC was identified:

- The former automotive dealership on the 1201 North Broadway property (proposed Broadway Junction location) was identified as Domenich Basso in the environmental database report search and the online GeoTracker database, and is associated with a completed-closed LUST case. The former dealership received regulatory case closure in 2001 from the LAFD for gasoline impacts to soils from an UST. An NFA letter dated November 28, 2001, was provided in records received from the LAFD. The NFA status of the LUST case is considered to present a HREC in connection with the proposed Project.

No CRECs were identified in connection with the proposed Project. The following de minimis condition (DMC) was identified during this assessment:

- An active crude oil pipeline operated by Plains Pipeline L.P. was identified beneath Alameda Street along the proposed Project alignment.

Based on the Tier 1 vapor encroachment screening (VES) completed, following ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15), potential vapor encroachment conditions (VECs) were identified in connection with residual concentrations of TPH that may still exist on the 1201 North Broadway property (proposed Broadway Junction location) in the areas of the former in-ground hydraulic lifts and gasoline UST. Based on this information, a VEC due to on-site sources exists; however, based on the depth (15 feet or greater) to soil impacts, this VEC is not considered a REC to the proposed Project. Furthermore, review of the site-specific environmental database indicates that impacted sites are located in the immediate vicinity of the proposed Project. Based on their presence, a VEC to the proposed Project due to an off-site source may exist; however, the potential presence of a VEC is not considered a REC due to the lack of enclosed ground-level structures in these areas of the proposed Project.

Based on the results of this assessment, AECOM recommends the following:

- In order to be protective of human health and the environment and if excavated soils are planned for off-site disposal, a Soil and Groundwater Management Plan should be prepared for the

proposed Project due to the historical use of the area, the historical presence of railroad tracks along Alameda Street, and the proposed depths of excavation/drilled piles, prior to any re-grading, decommissioning, or construction activities. The Soil and Groundwater Management Plan should include methods and procedures for sampling and analyzing soils and/or groundwater to classify them as either hazardous or non-hazardous, and if identified as hazardous, should include additional methods and procedures (including notifications) for the proper storage, handling, transport, and removal of impacted soils and/or groundwater for off-site disposal and/or recycling. Methods and procedures in the Soil and Groundwater Management Plan should be protective of workers and the environment.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (Phase I ESA) was performed in support of the Draft Environmental Impact Report (EIR) for the Los Angeles Aerial Rapid Transit Project (proposed Project). The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the proposed Project.

Per ASTM International, Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions (DMCs). A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property, and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. DMCs are those situations that do not present a material risk of harm to public health or the environment, and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

In addition, a Tier 1 vapor encroachment screening (VES) was completed as part of this assessment. This screening was conducted in general accordance with the ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This assessment for the Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed existing operations associated with the proposed Project, including adjacent properties, as described in Section 3, Project Site Visit.

1.2 Scope of Work

The Phase I ESA included a site visit, regulatory research, historical review, and a review of the environmental database report search conducted for the proposed Project. In conducting the Phase I ESA, AECOM assessed the area of the proposed Project for visible signs of possible contamination and researched public records for the proposed Project (as applicable).

This report was performed in general accordance with ASTM E1527-13. Conclusions reached in this report are based upon the assessment performed, and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

According to ASTM E1527-13, certain components of the Phase I ESA will expire 180 days from the date of the component including, interviews with owners, operator, and occupants; searches for records of environmental cleanup liens; review of federal, tribal, State, and local government records; visual inspections of a property and adjoining properties; and declaration by the environmental professional responsible for the assessment, which subsequently may require updating. The entire report will expire one year from the date on the cover of this Phase I ESA report.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the proposed Project and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the proposed Project. The statements, findings, and opinions contained in this report are only intended to give approximations of the environmental conditions at the proposed Project.

As specified in ASTM E1527-13, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated – No Phase I ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs (Section 4.5.1 of ASTM E1527-13).
- Not Exhaustive – "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a Phase I ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-13).
- Comparison with Subsequent Inquiry – Phase I ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent Phase I ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors (Section 4.5.4 of ASTM E1527-13).

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-13 is employed. According to ASTM E2600-15, the following limitations apply:

- Uncertainty Not Eliminated in Screening – No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property (Section 4.5.1 of ASTM E2600-15).
- Not Exhaustive – The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information (Section 4.5.2 of ASTM E2600-15).

- Comparison with Subsequent Investigations – It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors (Section 4.5.4 of ASTM E2600-15).

This report was prepared pursuant to an agreement between Aerial Rapid Transit Technologies LLC (ARTT) (Client) and AECOM in support of the Draft EIR for the Los Angeles Aerial Rapid Transit Project, and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent, and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- It was not feasible to evaluate every individual room or space in the 1201 North Broadway building(s) during the site visits. AECOM's evaluation of this property focused on areas where hazardous substances may be or may have been handled. Based on the current use of the 1201 North Broadway property (office), this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the site visits of the 1201 North Broadway property, AECOM did not access the roof of the building(s) due to safety reasons. AECOM's evaluation of the 1201 North Broadway property focused on areas where hazardous substances may be handled. The site contact did not report any hazardous materials associated with the roofs. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the May 6, 2022 site visit, AECOM did not access the areas for the proposed Stadium Tower and Dodger Stadium Station due to area security/limitations (i.e., the area was closed to the public due to ongoing events and COVID testing). However, based on the current use of the areas (e.g., undeveloped hillside and stadium parking lot), this particular site-related limiting condition is not expected to have a significant limitation to this assessment.

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- A limitation was encountered in determining the historical use of the proposed Project. The earliest source of historical information reasonably ascertainable in which usage could be determined was from Sanborn Fire Insurance Maps dated 1888. At the time of the maps, the area of the proposed Project was depicted as predominately developed with mixed-use residential, commercial, and light industrial uses. Therefore, the ASTM E1527-13 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based on the identified uses, it is unlikely that there had been significant (e.g., heavy industrial) prior development; therefore, this data gap is not expected to impact the results of this assessment.

- It should be noted that not all standard historical sources, as defined per ASTM E1527-13, were reviewed as part of this assessment. It was not feasible to review historical local street directories and building department records as part of this assessment due to the length of the proposed Project. Based on information provided from the remaining standard historical sources that were reviewed as part of this assessment (i.e., property tax files, recorded land title records, zoning/land use records, topographic maps, Sanborn Fire Insurance Maps, aerial photographs) and from historical information provided in previously prepared environmental reports as well as a review of available agency records, additional historical information obtained from local street directories and building department records would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to impact the results of this assessment.
- Per ASTM E1527-13, current past owners, operators, and occupants of subject properties and adjacent properties in the area of the proposed Project who are likely to have material information regarding the potential for contamination at the properties shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Past owners and/or operators at the properties were not available for interview. However, based on historical data collected from other sources, this data gap is not expected to impact the results of this assessment.

2. Project Description

2.1 Overview of the Project

The proposed Los Angeles Aerial Rapid Transit Project (proposed Project) would connect Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system. The proposed Project would include an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would provide an aerial rapid transit (ART) option for visitors to Dodger Stadium, while also providing access between the Dodger Stadium property, the surrounding communities, including Chinatown, Mission Junction, the Los Angeles State Historic Park, Elysian Park, and Solano Canyon, to the regional transit system accessible at LAUS. The aerial gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately 7 minutes. The proposed Project would provide amenities at the Los Angeles State Historic Park, and would provide pedestrian improvements, including hardscape and landscape improvements. The ART system has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium, and provide safe, zero-emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to serve existing residents, workers, Park users, and visitors to Los Angeles.

Established aerial gondola transit systems worldwide, such as in La Paz, Bolivia, and Mexico City, Mexico, are being used as rapid transit for the urban population that they serve. The proposed Project would employ a Tricable Detachable Gondola system (also known as "3S").[1] 3S Gondola system cabins carry approximately 30 to 40 passengers. Similar systems are used in Koblenz, Germany, Phu Quoc, Vietnam, and Toulouse, France.

2.2 Project Location

The proposed Project is located in the City of Los Angeles, situated northeast of downtown Los Angeles. Figure 1 shows the regional location of the proposed Project. The proposed Project would commence adjacent to LAUS and El Pueblo de Los Angeles (El Pueblo) and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would include three stations, a non-passenger junction, and three cable-supporting towers at various locations along the alignment. As shown in Figure 2, the proposed Project location would generally be in the public right-of-way (ROW), or on publicly owned property, following Alameda Street, and then continuing along Spring Street in a northeasterly direction through the community of Chinatown to the southernmost corner of the Los Angeles State Historic Park. The alignment would then continue northeast over the western edge of the Los Angeles State Historic Park and the Los Angeles County Metropolitan Transportation Authority (Metro) L Line (Gold) to the intersection of North Broadway and Bishops Road. At this intersection, the proposed Project alignment would turn, and continue northwest following Bishops Road toward its terminus at Dodger Stadium, in the Elysian Park community. Figure 2-2 provides an overview of the proposed Project location.

2.3 Proposed Project Alignment and Components

The proposed Project "alignment" includes the suspended above-grade cables and cabins following the position of the Project components along the ART route from Alameda Station to Dodger Stadium Station.

[1] *The naming convention for this system is derived from the German word "seil," which translates in English to "rope". Therefore, Tricable Detachable Gondola systems are known as a "3S" systems due to the use of three ropes, or cables.*

2.3.1 Proposed Project Alignment

The proposed Project alignment would extend approximately 1.2 miles beginning near El Pueblo and LAUS on Alameda Street. The proposed Alameda Station would be constructed over Alameda Street between Los Angeles Street and Cesar E. Chavez Avenue, adjacent to the Placita de Dolores and planned LAUS Forecourt.

From the Alameda Station, the proposed Project alignment would remain primarily above the public ROW with portions above private property; and travel north along Alameda Street to the proposed Alameda Tower, which would be constructed on the Alameda Triangle, a portion of City ROW between Alameda Street, North Main Street, and Alhambra Street.

From the Alameda Tower, the proposed Project alignment would continue north along Alameda Street and cross Alpine Street. The proposed Alpine Tower would be constructed at the corner of Alameda Street and Alpine Street on City-owned property.

From the Alpine Tower, the proposed Project alignment would follow the public ROW and continue over the elevated Metro L Line (Gold). North of College Street, Alameda Street becomes Spring Street, and the proposed alignment would generally follow Spring Street in a northeasterly trajectory until it reaches the southernmost point of Los Angeles State Historic Park, where the proposed Chinatown/State Park Station would be constructed partially on City ROW, and partially within the boundaries of the Los Angeles State Historic Park.

The alignment then crosses over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) tracks.

The proposed Project alignment would continue traveling north towards the intersection of North Broadway and Bishops Road. The Broadway Junction would be located at the northern corner of the intersection of North Broadway and Bishops Road (1201 North Broadway). From the Broadway Junction, the proposed Project alignment would travel northwest primarily along Bishops Road, with portions above private property, crossing over SR-110 towards Dodger Stadium. The proposed Stadium Tower would be located on hillside private property north of Stadium Way between the Downtown Gate entrance road to Dodger Stadium and SR-110. The northern terminus of the system would be located in a parking lot at the Dodger Stadium property, where the proposed Dodger Stadium Station would be constructed.

Alameda Station: The Alameda Station would be located on Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles Street and Cesar E. Chavez Avenue. The station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point, with the passenger loading platform approximately 31 feet above Alameda Street. Vertical circulation elements (i.e. elevators, escalators, stairs) for pedestrian access, which would also serve as queuing areas to the station, would be introduced at-grade north of Placita de Dolores in a proposed new pedestrian plaza at El Pueblo on the west in an area currently used as a parking and loading area for El Pueblo. On the east, vertical circulation elements would be introduced at-grade from the planned LAUS Forecourt. Installation of the vertical circulation elements may include removal and replacement of trees, removal of parking and loading for El Pueblo, and installation of landscaping and hardscape.

Alameda Tower: The Alameda Tower would be located on the Alameda Triangle, a City ROW between Alameda Street, North Main Street, and Alhambra Avenue, consisting of a small green space flanked on all sides by roadways. The Alameda Tower would be 195 feet tall, with the cable suspended 175 feet above ground. Implementation of the Alameda Tower would include reuse and integration of the existing pavers located at the Alameda Triangle, as well as landscape and hardscape updates to the Alameda Triangle.

Alpine Tower: The Alpine Tower would be located on a City-owned parcel, currently being used as non-public parking storage for City vehicles, at the northeastern corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold). The Alpine Tower would be 195 feet tall at its tallest point, with the

cable suspended 175 feet above ground. The Alpine Tower would also include the installation of landscaping and hardscaping near the base of the tower.

Chinatown/State Park Station: The Chinatown/State Park Station would be located adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park. The southern portion of the station would be located on City ROW, while the northern portion of the station would be integrated into the southern boundary of the Los Angeles State Historic Park. The station would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point, with the passenger boarding platform approximately 50 feet above-grade. Access to the boarding platform would be from the mezzanine via elevators and stairs. Comprised of three levels, elevators and stairs from the ground level would lead up to a mezzanine 27 feet above-grade, and ramps for the queuing area would lead up to the boarding platform, which is 50 feet above ground.

The Chinatown/State Park Station would also include Park amenities, including approximately 740 square feet of concessions, 770 square feet of restrooms, and a 220-square-foot covered breezeway connecting the concessions and restrooms. Additionally, the Chinatown/State Park Station would include a mobility hub where passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program. Pedestrian access enhancements could include pedestrian improvements between Metro's L Line (Gold) Station and the Chinatown/State Park Station, consistent with the Connect US Action Plan, including hardscape and landscape improvements, shade structures, and potential seating, as well as support for the future Los Angeles State Historic Park bike and pedestrian bridge. The Chinatown/State Park Station would require the removal of trees and vegetation; however, it would include the installation of landscaping and hardscaping, including integration of the granite pavers. The Chinatown/State Park Station would provide passenger access to Chinatown, the Los Angeles State Historic Park, and to nearby neighborhoods and land uses, including the Mission Junction neighborhood, which includes the William Mead Homes public housing complex.

Broadway Junction: The Broadway Junction is a non-passenger junction that would be located at the intersection of North Broadway and Bishops Road. The junction would primarily be located on privately owned property, with a portion of the junction and overhead cable infrastructure cantilevered and elevated above the public ROW. The existing commercial building located at 1201 North Broadway would be demolished. The Broadway Junction would be approximately 227 feet long, 60 feet wide, and 98 feet high at its tallest point, with the platform approximately 50 feet above the ground. Vertical circulation elements (i.e., elevators and stairs) would be installed on the northwestern side of the junction for staff and maintenance access to the platform.

Stadium Tower: The Stadium Tower would be located on hillside private property north of Stadium Way between the Downtown Gate and SR-110, and would stand 179 feet tall, with the cable suspended 159 feet above ground. The Stadium Tower would also include the installation of landscaping near the base of the tower.

Dodger Stadium Station: The Dodger Stadium Station would be located in the southeastern portion of the Dodger Stadium property near the Downtown Gate. This station would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point. Cabins at this station would arrive and depart from an at-grade boarding platform, with the passenger queuing area also at-grade. The Dodger Stadium Station would include a subterranean area below the platform for storage and maintenance of cabins, as well as staff break rooms, lockers, and parts storage areas. The cabins would be transferred between the station platform and the subterranean area by way of a cabin elevator. Automated parking and controls would manage the process of storing cabins or returning them to service. Cabins would be returned to and stored at the Dodger Stadium Station when the system is not in use.

Restrooms for passenger use would be located at the station. The Dodger Stadium Station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating.

The Dodger Stadium Station is located adjacent to Dodger Stadium, which is operated as an MLB Stadium. The Project Sponsor will request consideration by the Los Angeles Dodgers of the potential for the Dodger Stadium Station to include a mobility hub where outside of game day periods, passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program and individual bike lockers, to access Elysian Park and other nearby neighborhoods, including Solano Canyon. Issues to be addressed in connection with such consideration as to the mobility hub include maintaining security for Dodger Stadium and the surrounding surface parking areas.

Implementation of the Dodger Stadium Station would require the removal of parking spaces, as well as removal and replacement of landscaping.

2.4 System Operations

2.4.1 Typical Operating Logistics

During operations, the cabins would travel on a continuous loop between the Alameda Station and the Dodger Stadium Station. Cabins would pass through passenger stations at roughly one foot per second (less than one mile per hour) to allow for unloading and loading. If needed, a cabin could be stopped to accommodate passenger boarding. After the cabins pass through the unload/load zones, the doors would close and the cabins would accelerate to match the line speed of the haul rope before reattaching to the haul rope.

At Alameda Station, arriving cabins (southbound) would decelerate, doors would open, and passengers would unload. The cabins would execute a U-turn in the station before passing through the load zone (for northbound passengers), load passengers (if any), close doors, then accelerate to be reattached to the haul rope.

At the Chinatown/State Park Station, cabins would detach from the rope and decelerate to the station speed. Since passenger access would be provided at this station, the cabins would decelerate to about one foot per second (less than one mile per hour), and the doors would open. After traveling through the unload and load zones, the cabin doors would close, and the cabins would accelerate to line speed and then reattach to the haul rope.

At the Broadway Junction, where passenger unloading or loading is not proposed, the cabins would detach from the haul rope, decelerate to a speed of approximately six mph, execute a slight turn to follow the alignment, and then re-accelerate and reattach to the haul rope. The Alameda Station to Broadway Junction and Broadway Junction to Dodger Stadium Station systems come together at the Broadway Junction. When the cabins detach from the haul rope in the Junction, their move from one haul rope to the other haul rope would not be perceptible by passengers.

At the Dodger Stadium Station, the cabins would decelerate, doors would open, and passengers would unload. Since the Dodger Stadium Station would be an end station, the cabins would execute a U-turn in the station before passing through the load zone (for southbound passengers), load passengers (if any), close doors, then accelerate and reattach to the haul rope. As described above, gondola cabins would enter, traverse, and depart stations under fully automated control. Operation of the proposed Project would require approximately 20 personnel. Each station would have station attendants to assure safe boarding or to execute stops, if necessary. Attendants would also provide customer interaction and observation; if a passenger needs special assistance, an attendant may either further slow or stop a cabin. A separate operator may sit in a booth adjacent to the boarding area and monitor screens, which would show activities in each cabin and station, as well as the system controls.

2.4.2 Queueing and Ticketing/Fare Checking

Queueing areas would be built into, and adjacent as necessary, to each of the stations to provide a gathering place for passengers waiting to enter the stations, thereby preventing crowding of sidewalks and

walkways by passengers around stations. Queueing for the Alameda Station would occur in the planned LAUS Forecourt area on the eastern side of Alameda Street, and north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo on the western side of Alameda Street. At the Chinatown/State Park Station, queueing would occur on the mezzanine and boarding platform levels. At the Dodger Stadium Station, the queueing area would be located on the northern side of the station in a designated queueing area adjacent to the station.

Ticketing for the proposed Project would use either a chip-based card system or electronic ticketing that could be purchased and saved on a personal mobile device. Using these types of technologies would allow for contactless fare checking at the stations. Riders would pre-purchase their ticket prior to entering the boarding platform, and fares would be checked using a card reader/scanner.

2.4.3 Signage

Similar to other transit projects that incorporate signage, the proposed Project would include signage to support wayfinding for transit patrons, including information about transit connections and other important information to facilitate transit usage. Private funding for the proposed Project is anticipated to be supported by naming rights and sponsorship revenues, and such sponsors would be recognized in Project signage, which would be designed consistent with applicable Metro-, City-, and State-approval requirements. Such signage may include identification and other static signs, electronic digital displays, and/or changeable message light-emitting diode (LED) boards that include both transit information and other content, which may include off-site advertising that generates proceeds to support transit system costs and operations. Signage would be architecturally integrated into the design of the ART system, including its stations, the junction, towers, and cabins. In addition, directional and pedestrian signage would be placed adjacent to and throughout the proposed Project as necessary to facilitate access and safety, including along the pedestrian improvements between Metro's L Line (Gold) Station and the pedestrian connection between the Dodger Stadium Station and Dodger Stadium. Project signage would be illuminated by means of low-level external lighting, internal lighting, or ambient light. Exterior lights would be directed onto signs to minimize off-site glare. Signage would be in conformance with all applicable requirements of the Los Angeles Municipal Code (LAMC), and in accordance with LAMC, lighting intensity would be minimized to avoid negative impacts to adjacent residential properties.

2.4.4 Lighting

Project lighting would include low-level lighting for security and wayfinding purposes adjacent to and in the stations, junction, and towers, in cabins, at the vertical circulation, and areas for ticketing, fare checking, and queueing. In addition, low-level lighting to accent signage, architectural features, landscaping, adjacent pedestrian plazas, Chinatown/State Park Station mobility hub, and potential Dodger Stadium Station mobility hub would be installed at the stations, junction, and towers. Lighting would also be provided underneath the elevated stations and junction. Lighting for the pedestrian access enhancements, including the pedestrian improvements between Metro's L Line (Gold) Station and the pedestrian connection between the Dodger Stadium Station and Dodger Stadium would include new pole lights for security and wayfinding purposes, as well as low-level lighting to accent signage and landscaping.

Lighting would be low-level and primarily integrated into the architectural features. Exterior lighting would be shielded, or directed toward the areas to be lit to limit spillover onto adjacent properties and off-site uses, and would meet all applicable LAMC lighting standards.

2.4.5 Maintenance

The proposed Project would require routine maintenance that would be performed by the system operator. The overall system would be observed on a daily basis as part of the startup routine.

Routine maintenance activities would generally take place during overnight periods or other scheduled down time. Cabins and their associated grips and hangers would be maintained in the shop at the Dodger Stadium Station. A work carrier cabin would be provided to facilitate work at tower equipment. Annual

maintenance activities may require crane access at tower locations, including the potential to require the temporary closing of traffic lanes.

Rope maintenance schedules would be determined through a combination of system design and periodic monitoring. The haul rope would need replacement approximately every 5 to 10 years. This would require pulling a new haul rope, which would take up to two weeks to complete.

On a periodic basis, the system would undergo formal testing as prescribed by California Division of Occupational Safety and Health (Cal/OSHA) and appropriate ropeway standards. This formal testing is required by standards to occur at least every 7 years. It is anticipated that the system would be closed to riders for up to two days during the formal testing events.

Backup power would be provided by battery storage at each station and tower, and the non-passenger junction. The battery storage system would be tested on a regular basis, and would provide backup power to allow unloading of the system in the event of a power grid failure.

2.4.6 Power Requirements

Operational power requirements can be separated into two categories: normal operations and emergency operations. Power requirements for 100 percent of the power for the proposed Project would be provided by the City of Los Angeles Department of Water and Power's (LADWP's) Green Power Program, through a connection to their power grid, and would include the power to operate the gondola system and the non-gondola system components (i.e., lights, ventilation, escalators, elevators). When operating at capacity, normal operations are estimated to require a total of approximately 2.5 megawatts of power.

Power requirements for emergency operations consist of the energy needed for operations in the event of a power grid failure. The proposed Project would include the installation of backup battery storage at each station, tower, and junction to provide backup power to allow unloading of the system in the event of a power grid failure. The total backup power required to allow unloading of the system is 1.4 megawatts.

2.4.7 Sustainability Features

The proposed Project would provide a sustainable, high-capacity zero-emission ART option for visitors to Dodger Stadium, while also providing access between Dodger Stadium, the surrounding communities, and the regional transit system accessible at LAUS. ART technology is quiet, and the proposed Project would reduce VMT and congestion, leading to reduced GHG emissions and improved air quality.

The proposed Project's stations, junction, towers, and gondola cabins would incorporate energy-efficient, sustainable, water and waste efficient, and resilient features, as feasible. The proposed stations and junction are designed to be open-air buildings, allowing for passive ventilation strategies and providing direct access to outdoor air and natural daylight, while also providing adequate shade protection from heat. The cabins would be ventilated to enhance air quality for passengers.

The design intent and structural strategy for the stations and towers also provides an efficiency of materials. The steel plate tower forms have been designed as "Monocoque" structures, where structure, form, and finish are unified. Materials for the stations, junction, and towers would be locally sourced where possible, and would include recycled content where possible. Light-toned finish materials would also serve to minimize heat island concerns.

The proposed Project would be designed to comply with all applicable State and local codes, including the City of Los Angeles Green Building and Low-Impact Development (LID) Ordinances.

2.5 Construction

Construction of the proposed Project is anticipated to begin as early as 2024, and take approximately 25 months, including construction, cable installation, and system testing. The detailed construction procedures informing the environmental impact analyses are included in Appendix B of the Draft EIR. A summary of the construction activities is provided below. Construction of the Project components may partially overlap in schedule, especially because construction would occur at several physically separated sites.

Utility relocations would occur prior to construction of the proposed Project components, and would be coordinated directly with the utility providers. Following utility relocations, construction would commence. Detailed information on utilities relocations is included in Appendix B of the Draft EIR.

During construction, some parking spaces at Dodger Stadium would be temporarily closed for construction of the Dodger Stadium Station, and for overall Project construction, trailers, laydown and staging areas, and construction worker parking.

Construction of more than one Project component would occur at the same time, with consideration of available materials, work crew availability, and coordination of roadway closures. Table 1 below includes the estimated duration to complete construction of each of the proposed Project components, the maximum depths of drilled piles, the maximum depth of excavation, the amount of excavation, and the amount of materials (soils and demolition debris) to be exported for each component of the proposed Project.

Table 1: Proposed Project Construction Details

Component	Construction Duration	Maximum Depth of Drilled Piles	Maximum Depth of Excavation	Amount of Excavation	Amount of Materials Exported
Alameda Station	17 months	125 feet	10 feet	2,728 cubic yards	2,295 cubic yards
Alameda Tower	12 months	120 feet	10 feet	2,850 cubic yards	2,292 cubic yards
Alpine Tower	11 months	120 feet	10 feet	3,606 cubic yards	2,887 cubic yards
Chinatown/ State Park Station	19 months	80 feet	10 feet	6,267 cubic yards	4,567 cubic yards
Broadway Junction	19 months	120 feet	7 feet	6,407 cubic yards	5,379 cubic yards
Stadium Tower	12 months	120 feet	7 feet	1,286 cubic yards	1,202 cubic yards
Dodger Stadium Station	20 months	55 feet	42 feet	44,313 cubic yards	44,001 cubic yards

Following completion of construction, the gondola cables would be installed, followed by system testing and inspections.

Working hours would vary to meet special circumstances and restrictions, but are anticipated to be consistent with the City's allowable construction hours of Monday through Friday between 7:00 a.m. to 9:00 p.m. and Saturdays and National Holidays between 8:00 a.m. to 6:00 p.m. While not anticipated, approval would be required from the City of Los Angeles Board of Police Commissioners for any extended construction hours and possible construction on Sundays.

Anticipated closures would include lane closures in which lanes would be closed 24-hours a day during certain phases of construction, or alternating closures during certain phases of construction, in which closures would occur during construction hours for approximately 10 hours a day, and roads would reopen during non-construction hours for approximately 14 hours a day. For alternating closures, during non-construction hours, steel plates would be placed over construction sites to the extent feasible in order to allow for vehicular and pedestrian circulation. The closures and hours would vary between location and phase of construction. The proposed Project would implement a Construction Traffic Management Plan that would include detours and ensure that emergency access is maintained throughout all construction activities.

3. Project Site Visit

An original site visit of the proposed Project, adjacent properties, and public ROWs was performed on March 18, 2020. The purpose of the site visit was to identify potential environmental concerns in the area of the proposed Project. AECOM was unaccompanied during the March 18, 2020 site visit; therefore, interviews were not conducted. The site visit methodology consisted of walking accessible areas of the proposed Project alignment and portions of the surrounding area. Observations of the proposed Project were made from existing ROWs and other publicly accessible areas. Where applicable, online resources and mapping tools were used to enhance observations of current on-site conditions.

A follow-up site visit of the proposed Broadway Junction location (1201 North Broadway property) was completed on September 30, 2020. During the site visit, AECOM was accompanied through the 1201 North Broadway property by a tenant representative. The site visit methodology consisted of walking over accessible areas of the 1201 North Broadway property, including the building interiors and exteriors, and the perimeter of the property.

An updated site visit of the proposed Project (including the 1201 North Broadway property), adjacent properties, and public ROWs was performed on May 6, 2022. During the site visit, AECOM was accompanied through the 1201 North Broadway property by a tenant representative. AECOM was unaccompanied through the public ROWs and adjacent properties; therefore, interviews were not conducted for these areas. The site visit methodology consisted of walking accessible areas of the proposed Project alignment and portions of the surrounding area. Observations of the proposed Project were made from existing ROWs and other publicly accessible areas.

Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4. The following sections summarize the results of the site visits.

3.1 Observations of Proposed Project Alignment

The proposed Project would commence adjacent to LAUS and El Pueblo and terminate at Dodger Stadium. The proposed Project would include three stations, a non-passenger junction, and cable-supporting towers at various locations along the alignment, as discussed in Section 2.1.1. At these locations, the horizontal footprint of the alignment would provide structural support for the cables and gondola cabins. The observations of the proposed Project alignment during the site visits are discussed below from south to north.

3.1.1 Alameda Station

The Alameda Station would be located on Alameda Street in the ROW adjacent to the planned LAUS Forecourt and Placita de Delores between Los Angeles Street and Cesar E. Chavez Avenue. Construction of the Alameda Station in the ROW would require excavation to a maximum depth of 10 feet bgs, and the maximum depth of the drilled piles is expected to be 125 feet below pile depth. Vertical circulation elements (i.e., elevators, escalators, stairs) for pedestrian access, which would also serve as queuing areas to the station, would be introduced at-grade north of Placita de Dolores in a proposed new

pedestrian plaza at El Pueblo on the western side of Alameda Street, and in the planned LAUS Forecourt area on eastern side. The proposed new pedestrian plaza at El Pueblo is located adjacent to the north of Placita de Dolores on City-owned property (part of the ROW), and currently contains a small, paved parking lot and loading area for El Pueblo. The planned LAUS Forecourt is part of the LAUS property (defined by the Los Angeles County Office of the Assessor as APN 5409-023-941) and is currently occupied by an asphalt-paved surface parking lot associated with LAUS. Construction of the vertical circulation elements would require excavation to a maximum depth of 10 feet bgs.

3.1.2 Alameda Tower

The Alameda Tower would be located on a portion of the Alameda Triangle, which is a triangular-shaped City-owned property (part of the ROW), between Alameda Street, North Main Street, and Alhambra Avenue. Construction of the Alameda Tower would require excavation to a maximum depth of 10 feet bgs, and the maximum depth of the drilled piles is expected to be 120 feet below pile depth. The Alameda Triangle property currently has minimal landscaping and pavers/paved sidewalk areas.

3.1.3 Alpine Tower

The Alpine Tower would be located on a City-owned parcel (APN 5409-008-909) at the northeastern corner of the intersection of Alameda Street and Alpine Street. The Alpine Tower is proposed to be located on the northern portion of APN 5409-008-909 (901 North Main Street) on the northern side of Alpine Street. This portion of the parcel encompasses approximately 0.56 acre, and is currently a paved surface lot surrounded by chain-link fencing, with an overhead easement for the elevated Metro L Line (Gold) tracks. At the time of the site visits, this portion of the parcel was being used for parking. Construction of the Alpine Tower would require excavation to a maximum depth of 10 feet bgs, and the maximum depth of the drilled piles is expected to be 120 feet below pile depth.

3.1.4 Chinatown/State Park Station

The Chinatown/State Park Station would be located adjacent to Spring Street in the southernmost portion of Los Angeles State Historic Park. The southern portion of the station would be on City-owned property (part of the ROW) immediately south of the park's southern entrance. This area is currently hardscaped with perimeter landscaping. The northern portion of the station would be integrated into the southern boundary of the Los Angeles State Historic Park (APN 5414-016-903). This portion of the station would include Park amenities, including approximately 740 square feet of concessions, 770 square feet of restrooms, and a 220-square-foot covered breezeway connecting the concessions and restrooms. Additionally, the Chinatown/State Park Station would include a mobility hub where passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program. The Chinatown/State Park Station would also include pedestrian access enhancements between Metro's L Line (Gold) Station along North Spring Street, approximately 500 feet to the south-southwest. Construction of the Chinatown/State Park Station would require excavation to a maximum depth of 10 feet bgs, and the maximum depth of the drilled piles is expected to be 80 feet below pile depth.

Historically, this portion of the proposed Project alignment was part of the Southern Pacific Railroad (SPRR) Company's Freight Yards (also known as Union Pacific Railroad [UPRR] – Cornfield Yard), which is discussed in Sections 5 and 6.3.1.

3.1.5 Broadway Junction

The Broadway Junction is a non-passenger junction that would be located at the intersection of North Broadway and Bishops Road. The junction would primarily be on privately owned property (1201 North Broadway property), with a portion of the junction and overhead cable infrastructure cantilevered and elevated above the public ROW. The 1201 North Broadway property includes APNs 5414-021-001, 5414-

021-007, 5414-021-008, and 5414-021-021, which total approximately one acre, and are described below.

- APN 5414-021-001 (442-448 Savoy Street and 1216 Bishops Road) encompasses approximately 0.23 acre developed with a one-story, 4,000-square-foot portion of a commercial office building (part of the building is on APN 5414-021-007) constructed in 1937, and an exterior courtyard area that is mainly unpaved with minimal landscaping surrounded by corrugated metal fencing. The building is constructed of brick walls on a slab-on-grade concrete foundation with a wooden truss roof. The exterior courtyard area portion of the parcel is used as an outdoor space for tenants of the commercial office building, and was partially being used for parking at the time of the site visits. A pad-mounted transformer owned by LADWP, and two storm drains were observed in the northern exterior courtyard area. This area also provides access to the building's electrical room, which contains electrical panels and a dry-type transformer.
- APN 5414-021-007 (1201-1213 North Broadway) encompasses approximately 0.51 acre, developed with a one-story commercial office building (part of the building is on APN 5414-021-001, which joined together comprise a total of approximately 26,000 square feet) originally constructed in 1924, with two additions in 1937 (see APN 5414-021-001 above) and 1946. The building is constructed of reinforced-concrete and brick walls on a slab-on-grade concrete foundation with a wooden truss roof. The interior of the building contains a lobby, offices, meeting rooms, kitchen, restrooms, an architectural woodshop, and a janitorial closet. The building interior is finished with carpet, concrete, and hardwood floors; drywall, brick, and concrete walls; and open ceilings with overhead fluorescent lighting and air conditioning ducting.
- APN 5414-021-008 (1217 North Broadway) encompasses approximately 0.13 acre developed with an asphalt-paved surface parking lot constructed in 1963, which is associated with the adjacent commercial office property.
- APN 5414-021-021 (1221 North Broadway) encompasses approximately 0.09 acre developed with an asphalt-paved surface parking lot constructed in 1963, which is associated with the adjacent commercial office property.

Demolition of the structures/features on these parcels would be required to accommodate the Broadway Junction for the proposed Project. Construction of the Broadway Junction would require excavation to a maximum depth of 7 feet bgs, and the maximum depth of the drilled piles is expected to be 120 feet below pile depth.

Historically, the 1201 North Broadway property was occupied by an automotive sales and service dealership, which is discussed in Sections 5 and 6.3.1.

3.1.6 Stadium Tower

The Stadium Tower would be located on a hillside on privately owned property north of Stadium Way between the Downtown Gate entrance road to Dodger Stadium and SR-110. The privately owned hillside property includes APN 5415-018-016, and is part of the Dodger Stadium property. This area consists of dense vegetation on an upward slope between SR-110 and Dodger Stadium. Construction of the Stadium Tower would require excavation to a maximum depth of 7 feet bgs, and the maximum depth of the drilled piles is expected to be 120 feet below pile depth.

3.1.7 Dodger Stadium Station

The Dodger Stadium Station would be located in the southeastern portion of the Dodger Stadium property near the Downtown Gate. This area of the Dodger Stadium property consists of a portion of the existing stadium parking external ring-road, asphalt-paved surface parking lots, and a landscaped berm on APN 5415-018-016. The road would be restriped to accommodate the Dodger Stadium Station. Construction of

the Dodger Stadium Station would require excavation to a maximum depth of 42 feet bgs, and the maximum depth of the drilled piles is expected to be 55 feet below pile depth.

During the site visits, no visual evidence of aboveground storage tanks (ASTs), underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable water or irrigation wells, monitoring wells, dry wells, oil/gas wells, clarifiers, septic tanks, or leach fields was identified associated with the proposed Project alignment, except for groundwater monitoring wells located in the immediate vicinity of the Los Angeles State Historic Park (proposed Chinatown/Park Station location), as identified based on a review of the online GeoTracker database. In addition, no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visits. Figure 3 provides an overview site plan of the proposed Project alignment, and Figures 4 through 7 provide detailed site plans of segments of the proposed Project alignment. Figure 8 provides a detailed site plan of the 1201 North Broadway property. Representative Site Photographs of the proposed Project alignment are provided in Appendix A.

3.2 Surrounding Properties

The proposed Project is located in the urbanized and developed City of Los Angeles, situated northeast of downtown Los Angeles, in the communities of Downtown, Chinatown, Mission Junction, and Elysian Park. A portion of the proposed Project would travel over the western edge of the Los Angeles State Historic Park, which is managed by the California Department of Parks and Recreation, and SR-110 near Dodger Stadium. The properties surrounding the proposed Project are discussed from the south to north, generally along the alignment from component to component.

Alameda Station

At the southern end of the proposed Project alignment at the location of the proposed Alameda Station, the surrounding properties include LAUS (800 North Alameda Street) on the eastern side of Alameda Street and the El Pueblo de Los Angeles Historical Monument (125 Paseo De La Plaza) on the western side of Alameda Street. The proposed Project alignment follows Alameda Street northward, and on the southeastern corner of Alameda Street and Cesar E. Chavez Avenue is Mozaic Apartments (200-246 East Cesar E, Chavez Avenue); on the southwestern corner is Cielito Lindo (E-23 Olvera Street) and El Pueblo Parking, located at the north entrance to historic Olvera Street (discussed in Section 5). Between Cesar E. Chavez Avenue and Vignes Street, surrounding land uses are generally commercial, and at the northwestern corner of Cesar E. Chavez Avenue and Alameda Street is a Chevron gasoline station (901 North Alameda Street). Across Alameda Street from the Chevron gasoline station, on the northeastern corner, is the United States Postal Service (USPS) Terminal Annex (900 North Alameda Street). Just to the north of the USPS Terminal Annex is a site under construction by DPR Construction (200 Bauchet Street). Between Cesar E. Chavez Avenue and Alpine Street are commercial and office properties.

Alameda Tower

At the location of the proposed Alameda Tower located on Alameda Triangle (City-owned property), adjacent properties consist of a CNG fueling station and Los Angeles County Fleet Services facility (1055 North Alameda Street) on the western side of Alameda Street. Across Main Street, east of the Alameda Triangle, are surface parking lots and The California Endowment (1000 North Alameda Street). North of the Alameda Triangle, across Alhambra Avenue, are Starlight Nails & Beauty Supply (1028 Alameda Street) and a surface parking lot, followed by Alpine Street.

Alpine Tower

Just north of Alpine Street is the proposed Alpine Tower location on a City-owned parcel. Adjacent properties consist of a multi-family residential property (808 North Spring Street) on the western side of Alameda Street and Homeboy Industries (130 West Bruno Street) to the north. Beyond the proposed Alpine Tower location, the elevated Metro L Line (Gold) structure curves and crosses over Alameda Street

and runs northward parallel to the western side of Alameda Street. Between Alpine Street and College Street, surrounding properties are commercial and retail, including a multi-tenant commercial property (841-863 North Spring Street) on the western side of Alameda Street and Mission School Transportation (MST) School Bus Driver Training (130 West College Street) on the eastern side. North of College Street, Alameda Street transitions into Spring Street, and surrounding properties are generally commercial/retail, multi-family residential, and vacant land. The Metro L Line (Gold) Chinatown Station, multi-family residential (Blossom Plaza, 900 North Broadway), and commercial properties (Capitol Milling, 1231 North Spring Street) are on the western side of Spring Street just north of College Street, and on the eastern side of Spring Street is vacant land (924 North Spring Street) that has been approved by the City for redevelopment for residential use.

Chinatown/State Park Station

The proposed Chinatown/State Park Station is located adjacent to Spring Street, partially on City-owned property (part of the ROW) at the southern end of the Los Angeles State Historic Park and integrated into the southern boundary of the Los Angeles State Historic Park. In this area, Spring Street curves northeastward along the southern boundary of the park, with commercial businesses beyond (south of) Spring Street. From the Chinatown/State Park Station, the alignment continues northward over the western edge of the Los Angeles State Historic Park and parallel to North Broadway and the Metro L Line (Gold) tracks.

Broadway Junction

The proposed Broadway Junction is located on the northeastern corner of North Broadway and Bishops Road on privately owned property (1201 North Broadway). The surrounding properties include adjacent residences to the northeast, northwest, and north, across Savoy Street; commercial businesses (1231 North Broadway) to the east; Los Angeles State Historic Park to the south across North Broadway and the Metro L Line (Gold) structure; and Cathedral High School (1253 Bishops Road) to the west, across Bishops Road.

Stadium Tower and Dodger Stadium Station

From the proposed Broadway Junction location, the proposed Project alignment continues northwest along Bishops Road, over SR-110 and Stadium Way, to its terminus at the location of the proposed Dodger Stadium Station. The area between SR-110 and Dodger Stadium consists of vacant, vegetated hillside property. Dodger Stadium property encompasses approximately 300 acres on the hillside of Chavez Ravine in the Elysian Park neighborhood. It is surrounded by residential neighborhoods and open space/parkland, as well as the Los Angeles Police Department (LAPD) training facility (1880 Academy Drive) to the north, the Frank Hotchkin Memorial Training Facility/Naval and Marine Corps Reserve Center (1700 Stadium Way) to the southwest, and Barlow Hospital (2000 Stadium Way) to the northwest.

No dry cleaners were identified in the immediate vicinity (i.e., 500 feet) of the proposed Project alignment. Two gas stations were observed in the immediate vicinity including: a Chevron gas station (901 North Alameda Street), and a CNG fueling station (1055 North Alameda Street). Based on the site reconnaissance of the adjacent properties and surrounding neighborhood, no off-site sources of environmental concern were identified.

3.3 Petroleum Products and Hazardous Materials

At the time of the site visit on September 30, 2020, small quantities of paints and paint-related supplies were observed stored in the architectural woodshop of the 1201 North Broadway building, and janitorial cleaning supplies and some paints were observed stored in a janitorial closet of this building. Also observed in the janitorial closet was a SCA-1200HT wash tank used to clean soluble support materials on 3D printed parts. A small propane tank (approximately 20 pounds) associated with the barbeque grill was observed in the northern exterior courtyard area of the 1201 North Broadway property. No staining or

other environmental concerns were noted in these areas of the 1201 North Broadway property at the time of the site visits.

No other on-site use or storage of petroleum products or hazardous materials was observed in the proposed Project at the time of the site visits. Based on the existing uses of the proposed Project as existing ROWs, park/open space, commercial office, vacant land adjacent to the freeway, and/or parking lot, the current use and storage of large quantities of hazardous substances or petroleum products is not expected.

3.4 Hazardous Waste

No evidence of current or historical on-site hazardous waste disposal activities was observed in the proposed Project during the site visits. The environmental database report did not identify active hazardous waste generators in connection with the proposed Project.

3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the development in the proposed Project (pre-1979), the potential exists for PCBs to be present in the proposed Project.

Vertical circulation elements (i.e., elevators, escalators, stairs) for pedestrian access to the Alameda Station, which would also serve as queuing areas to the station, would be introduced at-grade north of Placita de Dolores in a proposed new pedestrian plaza at El Pueblo on the west, and in the planned LAUS Forecourt on the east. Utility-owned pad-mounted transformers were identified via desktop study in these areas: one in a landscaped planter to the south of the parking spaces, which is proposed location of the new pedestrian plaza at El Pueblo, and the other in the northwestern corner of the paved parking lot associated with LAUS, which is the location of the planned LAUS Forecourt. Observations of the transformers were made by AECOM during the May 6, 2022 site visit. Labeling indicating PCB content was not observed on the transformers, and no staining was observed associated with the transformers at the time of the May 2022 site visit.

An additional utility-owned pad-mounted transformer was observed in the northern exterior courtyard area of the 1201 North Broadway property (APN 5414-021-001). Labeling indicating PCB content was not observed on the transformer, and no staining was observed associated with the transformer at the time of the site visits.

Pole-mounted transformers were observed in the proposed Project, which are owned and maintained by LADWP. Utility relocations would occur prior to construction of the proposed Project alignment, and would be coordinated directly with the utility providers.

No other hydraulic equipment (i.e., compactors, elevators, lifts) was observed in the proposed Project during the site visits.

3.6 Aboveground Storage Tanks

No ASTs were observed in the proposed Project during the site visits. In addition, no ASTs were listed in connection with the proposed Project in the site-specific environmental database report reviewed by AECOM. Historical ASTs associated with the former automotive dealership on the 1201 North Broadway property (proposed Broadway Junction location) are discussed in Sections 5 and 6.3.1.

3.7 Underground Storage Tanks

No USTs were observed in the proposed Project during the site visits. In addition, no active USTs were listed in connection with the proposed Project in the environmental database report. USTs associated with the properties adjacent to the proposed Project alignment are discussed in Section 6. Historical USTs associated with the former automotive dealership on the 1201 North Broadway property (proposed Broadway Junction location) are discussed in Sections 5 and 6.3.1.

Active and historical gasoline stations were identified adjacent to the proposed Project, which are discussed in Section 6.

3.8 Solid Waste

No evidence of current or historical on-site solid waste disposal activities was observed in the proposed Project during the site visits, except for at the 1201 North Broadway property (proposed Broadway Junction location). Three solid waste dumpsters were observed in the parking lot area on the southeastern portion of the 1201 North Broadway property, which appear to be routinely serviced by a contracted waste hauler. No evidence of inappropriate disposal activities and no significant staining were identified in this area during the site visits.

3.9 Water

The area of the proposed Project receives its water supply from the LADWP. Primary sources of water for the LADWP water supply include the Los Angeles Aqueduct system, local groundwater resources, recycled water from local water reclamation facilities for irrigation and industrial uses, and imported State Water Project water supplied by the Metropolitan Water District of Southern California. No visual evidence of potable water wells was identified in the proposed Project at the time of the site visits.

A LADWP water vault and three manhole covers were observed to the south of the proposed Stadium Tower location on the vegetated hillside slope to Dodger Stadium. A LADWP water easement runs north-south through this area, as well as a City of Los Angeles public utilities drainage and sewer easement that runs east-west.

3.10 Wastewater

Wastewater discharges are limited to effluent from human consumptive use at the 1201 North Broadway property (proposed Broadway Junction location). According to the City of Los Angeles Bureau of Engineering, Department of Public Works, NavigateLA database and review of previously prepared environmental reports (Section 5.4), this property is connected to the municipal sanitary sewer system. No other wastewater discharges were identified to be associated with the proposed Project alignment.

3.11 Stormwater

Two storm drains were observed in the northern exterior courtyard area of the 1201 North Broadway property (proposed Broadway Junction location). No staining or other concerns were observed in the vicinity of the storm drains.

Stormwater that does not infiltrate unpaved portions of the proposed Project flows to storm drain inlets, including curbside catch basins and inlets along the surrounding streets, which are connected to the municipal stormwater system. No staining was observed in the vicinity of the storm drains. No evidence of current or historical on-site pits, sumps, drywells, or catch basins was observed in the proposed Project during the site visits.

3.12 Heating and Cooling

LADWP provides electricity and Southern California Gas Company supplies natural gas service to the area of the proposed Project. The 1201 North Broadway building (proposed Broadway Junction location) is cooled by roof-mounted air conditioning units and heated by ceiling-mounted heaters on the interior of the building. No other heating or cooling systems were identified associated with the proposed Project alignment.

4. Environmental Setting

4.1 Topography

The proposed Project is located in the City of Los Angeles, northeast of downtown Los Angeles. Topographic coverage of the area of the proposed Project is provided by the United States Geological Survey (USGS), 7.5-Minute Series “Los Angeles, California” Quadrangle map (2012). The majority of the proposed Project alignment occupies a gentle, south-sloping alluvial plain located approximately one-half mile west of the Los Angeles River. The northern end of the proposed Project alignment slopes up more steeply towards the Dodger Stadium property and Elysian Park. Elevations along the gently sloping portion of the proposed Project alignment ranges from approximately 280 feet (North American Vertical Datum 1988 [NAVD88]) at the southern end to approximately 300 feet just south of where the alignment changes direction and heads northwest towards Dodger Stadium. Elevations along the northern portion of the alignment climb gradually from approximately 300 feet at the southeast up to approximately 515 feet at its northern terminus.

4.2 Soil/Geology

The proposed Project is located along the southern boundary of the Transverse Ranges Geomorphic Province adjacent to the northern boundary of the Los Angeles Basin. The Los Angeles Basin occupies an area at the intersection between the east-west-trending Transverse Ranges Geomorphic Province and the north-northwest-trending Peninsular Ranges Geomorphic Province (Norris and Webb, 1990). The area of the proposed Project is predominantly underlain by Quaternary alluvium associated with the Los Angeles River from the southern end to where it crosses North Broadway. The alluvium generally comprises unconsolidated sands with occasional gravel and cobble lenses deposited across the flood plain. This geologic unit was deposited primarily from flood and stream channel deposits. Alluvial fan deposits and a significant volume of artificial fill are present along the approach to and at the northern end of the proposed Project alignment (Dodger Stadium Station location). The alluvial fan deposits comprise unconsolidated gravel, sand, and silt, with boulders common along the hill fronts. This geologic unit was deposited primarily from flood deposits and debris flows. The Dodger Stadium property is underlain by artificial fill that was placed during construction of the Stadium. Bedrock underlying the alluvium and fills in the vicinity of Dodger Stadium comprises marine sedimentary rocks of the early Pliocene and late Miocene Puente Formation (Campbell, 2014). Geology and soils are discussed further in the *Geotechnical Document in Support of the Environmental Impact Report* prepared for the proposed Project.

According to the Natural Resource Conservation Service (NRCS) Web Soil Survey for Los Angeles County, California, Southeastern Part, the primary soil unit mapped in the area of the proposed Project consists of Urban Land, which consists of areas where 75 percent or more of the land is covered with impervious surfaces or structures, such as office buildings, hotels, multiple-unit dwellings, shopping centers, streets, sidewalks, and parking areas. The soils in Urban Land areas have been altered to the extent that they can no longer be separated into individual soil units.

4.3 Groundwater/Hydrology

According to the State of California Natural Resources Agency, California’s Groundwater Update 2013, dated April 2015, the proposed Project is located in the South Coast Hydrologic Region, which covers approximately 11,100 square miles in Southern California and includes portions of Los Angeles County. The South Coast Hydrologic Region is divided into alluvial groundwater basins, which are subdivided into subbasins. The proposed Project is located in the Central Subbasin (basin number 4-11.04) of the Coastal Plain of Los Angeles Groundwater Basin (basin number 4-11.04), in the South Coast Hydrologic Region. The Coastal Plain of Los Angeles Groundwater Basin covers approximately 836 square miles, and comprises four groundwater subbasins. The Coastal Plain of Los Angeles Groundwater Basin is

bounded on the north by the Hollywood Fault, the Santa Monica Mountains, and the Repetto, Merced, Puente, Elysian, and Chino Hills; on the east by the Santa Ana Mountains; on the south by the San Joaquin Hills and the Pacific Ocean; and on the west by the Pacific Ocean.

According to the California Department of Water Resources, Bulletin 118, Coastal Plain of Los Angeles Groundwater Basin, Central Subbasin, dated 2020, the Central Subbasin (Central Basin), which underlies the majority of the proposed Project alignment, occupies approximately 277 square miles in the southeastern portion of the Coastal Plain of Los Angeles Groundwater Basin. The remaining portion of the proposed Project is underlain by less permeable rocks of the Elysian Hills, and is not in a mapped groundwater basin. The Central Basin is bounded on the northeast and east by the Elysian, Repetto, Merced, and Puente Hills; on the southeast by Coyote Creek, which forms a drainage divide between the Central Basin and the Orange County Groundwater Basin; on the southwest by the Newport-Inglewood fault system; and on the north by a surface divide known as the La Brea high.

According to the Water Replenishment District of Southern California, Groundwater Basins Master Plan, dated 2016, groundwater in the Central Basin generally occurs in Holocene and Pleistocene age sediments at relatively shallow depths, and enters the basin through surface flow through Whittier Narrows and subsurface flow from the San Gabriel Valley, as well as direct percolation of precipitation and stream flow from the Los Angeles and San Gabriel Rivers and their tributaries.

Depth to groundwater and flow direction was obtained from the California State Water Resources Control Board (SWRCB) GeoTracker Database and the Los Angeles County Department of Public Works online Groundwater Well database. Groundwater levels in the area of the proposed Project range from depths of approximately 20 to 60 feet bgs. According to the Geotechnical Document prepared in support of the Los Angeles Aerial Rapid Transit Environmental Impact Report, by ENGEO Incorporated, dated March 2022, groundwater is relatively shallow, at depths ranging from about 20 to 30 feet bgs for most of the proposed Project alignment along Alameda and Spring Streets to the Los Angeles State Historic Park, and increases to approximately 60 feet bgs at the proposed Broadway Junction and Stadium Tower, and to approximately 70 feet bgs at the proposed Dodger Stadium Station. In the northern portion of the proposed Project, groundwater has been calculated to flow to the south-southwest (former UPRR – Cornfield Yard, current Los Angeles State Historic Park site), and in the southern portion groundwater flows to the south (The California Endowment, 1000 North Alameda Street). It should be noted that the actual depth and flow direction of groundwater beneath the proposed Project cannot be determined without site-specific groundwater monitoring well data.

5. Site and Area History

Historical information for the proposed Project alignment is based on AECOM's review and analysis of the following historical sources:

- Topographic maps dated 1894, 1896, 1900, 1928, 1953, 1966, 1972, 1981, 1991/1994, and 2012;
- Sanborn Fire Insurance Maps dated 1888 (5), 1894 (5), 1906 (11), 1950 (11), 1957 (12), 1964 (12), and 1970 (12); and
- Aerial photographs dated 1923, 1928, 1938, 1948, 1952, 1964, 1970, 1972, 1977, 1979, 1981, 1989, 1994, 2002, 2005, 2009, 2012, and 2016.

These historical sources were obtained from Environmental Data Resources, Inc. (EDR). Supplemental information regarding the dates of construction of various buildings in the proposed Project was obtained from various City of Los Angeles websites and the Los Angeles County Office of the Assessor online Property Assessment Information System (PAIS).

A previously prepared environmental report for the 1201 North Broadway property was provided for review as part of this assessment, and is discussed in Section 5.2. Additionally, available files pertaining to Hazardous Materials/USTs records for 1201 North Broadway were requested from the City of Los Angeles Fire Department (LAFD). Based on a search of their files, LAFD provided inactive hazard materials/UST records for 1201 North Broadway, which are discussed in Section 6.5.1.

The following sections describe the historical use information for the proposed Project alignment.

5.1 Historical Summary for the Area of the Proposed Project

5.1.1 Topographic Map Review

In the 1894 to 1900 topographic maps, Alameda Street and Spring Street are depicted along their present-day alignments, with railroad tracks running down them with a railroad yard shown in the area of the present-day Los Angeles State Historic Park, and Elysian Park in the area of the present-day Dodger Stadium. Between the 1900 and 1928 topographic maps, the area of proposed Project had a notable increase in development, including an increase in development density along Alameda and Spring Streets, and in Elysian Park, in the area of Dodger Stadium. In the 1928 topographic map, the area of present-day Cathedral High School (1253 Bishops Road) was depicted developed as a cemetery, and railroad tracks were depicted in the area of present-day LAUS. In the 1953 topographic map, the areas along Alameda and Spring Streets are depicted in an area of urban development, and no structures or features are depicted, except the railroad tracks, Union Station, and Cathedral High School, were depicted as developed in the area of the proposed Project. In the 1966 to 1981 topographic maps, Union Station appears to have been expanded, Naud Junction (a passenger depot) is depicted in the area of Alameda Triangle, Dodger Stadium was depicted as developed in the area of Elysian Park, and an unimproved access road into the stadium was depicted in the area of the proposed Dodger Stadium Station. In the 2012 topographic map, the area of the proposed Project is depicted as an area of urban development, and no structures or features are depicted other than the surrounding streets and surrounding community names.

5.1.2 Sanborn Map Review

Alameda Station

In the 1888 and 1894 Sanborn maps, Alameda Street is depicted following its present-day alignment, with railroad tracks running down it. In the Sanborn map dated 1888, the western side of Alameda Street, in the area of the present-day El Pueblo de Los Angeles Historical Monument between Los Angeles Street

and Cesar E. Chavez Avenue (formerly Macy Street), is depicted as developed with “Chinese Quarters” (tenements); Hotel D’Italia Unita, a wine cellar; Pironi and Slatri Winery and Brandy Vault and Distillery; smaller commercial uses and stores; dwellings; and a vacant lot bounded by brothels. By the 1894 Sanborn map, Los Angeles Street was extended through what is today La Placita de Dolores, requiring the demolition of the southeastern corner of the winery, which was labeled as G. Dematteis Bros. Winery and Distillery at that time, and the former hotel was labeled as resort and female boarding. By 1906, the northern portion of the former “Chinese Quarters” had been redeveloped with Los Angeles Railway Co sub-station; and by 1950, the southern portion had been redeveloped with Plaza Mexican Church (note indicates built in 1926). In the 1950, 1957, and 1964 Sanborn maps, the area is depicted as developed with stores (former hotel/boarding), office, private garage, wine storage, and restaurants with apparent parking and a ‘gas and oil’ (gasoline) station (853/899 North Alameda Street). In the 1970 Sanborn map, the gasoline station is no longer present, but is depicted as a parking lot, and the former sub-station is labeled as a warehouse.

The eastern side of Alameda Street, in the area of the planned LAUS Forecourt between Los Angeles Street and Cesar E. Chavez Avenue, is not depicted in the earliest Sanborn map dated 1888. In the Sanborn map dated 1894, this area adjacent to the east of Alameda Street is depicted as “Chinese Quarters” (tenements) and brothels; and in the area of the present-day Mozaic Apartments (200-246 Cesar E. Chavez Avenue), a building complex is depicted developed, as formerly occupied by the Los Angeles Orphan Asylum. In the Sanborn map dated 1906, E.K. Wood Lumber Yard and Planing Mill is depicted with electric power use on the eastern side of Alameda Street, in addition to the “Chinese Quarters.”. In the Sanborn maps dated 1957, 1964, and 1970, the present-day LAUS (800 N Alameda Street) is depicted developed as Los Angeles Union Passenger Terminal, which a note indicates was built in 1937 to 1938, and the portion fronting Alameda Street is depicted as auto parking and driveway.

In the 1888 Sanborn map, the area of the present-day Chevron Station #9-8815 (901 North Alameda Street) is depicted as developed with a dwelling and store uses. In the 1906 Sanborn map, this area is depicted as developed with stove factory and machine shop operations with gasoline engines in use. In the 1950 Sanborn map, this area is depicted as developed with store and other commercial uses. In addition, the present-day Bauchet Street is depicted as first developed in 1950. In the 1957, 1964, and 1970 Sanborn maps, the area is depicted as developed with a ‘gas and oil’ (gasoline) station as at present-day.

In the 1888 Sanborn map, the area of the present-day USPS Terminal Annex (900 North Alameda Street) and the present-day The California Endowment (1000 North Alameda Street) is depicted as developed with a large area occupied by Kerchoff Cuzner planing mill and lumber yard and J.M. Planing Mill and Lumber Yard (J.M.). In the 1894 Sanborn map, the Kerchoff Cuzner planing mill and lumber yard was depicted with a planing and moulding building on the first floor, adjacent to the east of Alameda Street and Main Street, and equipped with a vertical steam boiler and other apparent fire suppression equipment, including a water tank and pumps and/or hoses. In the 1906 Sanborn map, the area of the planing and moulding building is depicted as being torn down, and the two adjacent lumber mill properties are depicted as provided with city water and electric power. A steam boiler is depicted in operation at the J.M. Lumber Mill property. In the 1950 Sanborn map, this area is depicted as Oil Well Supply Company of California (922-934 North Main Street), including with automotive repair, offices, warehouses, oil rig machine parts, welding, storage yard, and private garage. In the 1957 Sanborn map, the area of the present-day USPS Terminal Annex (900 North Alameda Street) is depicted as U.S. Government Property for mail sacks and storage, and mail truck facilities warehouse uses; and the area of the present-day The California Endowment (1000 North Alameda Street) is depicted with uses similar to those in the 1950 Sanborn map. In the 1964 and 1970 Sanborn maps, the present-day USPS Terminal Annex (900 North Alameda Street) is depicted as developed, similar to present-day. In the 1964 and 1970 Sanborn maps, the area of the present-day The California Endowment (1000 North Alameda Street) is depicted as developed, with an open deck parking garage.

Alameda Tower

In the 1888 and 1894 Sanborn maps, the area of the proposed Alameda Tower is depicted as developed with Naud Junction, a passenger depot, with railroad tracks along Alameda Street. In the 1906 Sanborn map, Naud Junction remains depicted as office and a small unlabeled building in the area of the Alameda Triangle, and further to the north is a beer bottling facility and agricultural import warehouse. In the 1950 and 1957 Sanborn maps, the northern portion of the area of the Alameda Triangle is depicted as developed with a gas and oil (gasoline) station (801 North Main Street); and further to the north is a printing and wholesale paper facility. In the 1964 Sanborn map, the gasoline station is no longer depicted, and the area is vacant, with a paper warehouse and an appliance warehouse to the north of present-day Main Street. In the 1970 Sanborn map, the area to the north of the Alameda Triangle (north of Main Street) is depicted as developed with a paper warehouse and an additional warehouse (type not specified).

In the 1888 and 1894 Sanborn maps, the western side of Alameda Street is depicted as developed with E.E. Henry's Mattress Manufacturing, Old Roma Hotel, a bowling alley, several laundry buildings, and numerous dwellings. Much of this block on the western side of Alameda Street remains depicted as undeveloped. Further to the north, on the eastern side of Alameda Street, Fulton Engine Works is depicted as developed with a machine and blacksmith shop, an upright boiler powered by steam, and fueled by coal and Naud's Warehouse for general merchandise, grain storage, wool storage, and wine and rectifying brady cellars. In the 1906 Sanborn map, the western side of Alameda Street, in the area of the Alameda Tower, is depicted as developed with mixed-use commercial and residential dwellings including a winery; a laundry with a water tank, boiler, and irons depicted as heated by gas; a wire mattress maker; and Trans-Continental Freight in the area of the present-day Los Angeles County Fleet Services (1055 North Alameda Street). In the 1950 Sanborn map, the area is developed with dwellings, stores, machine shops, and warehouses. Elevators in the buildings are depicted in use by this time. In the 1957 Sanborn map, the area is developed with stores and warehouses. In the 1964 Sanborn map, the area is depicted with a store, LA County Mechanical Department, a pipe and cutting machine shop and storage yard, and a warehouse. In the 1970 Sanborn map, the area remains depicted with the store and LA County Mechanical Department.

In the 1888, 1894, and 1906 Sanborn maps, the area to the east of Main Street is depicted as developed with a lumber yard. By the 1950 Sanborn map, the area is developed with parking lot, fire station (800 North Main Street), and private garage associated with the Oil Well Supply Company of California property discussed previously. In the 1957 Sanborn map, the private garage is labeled as occupied by U.S. Forest Service; and by the 1964 Sanborn map, had been redeveloped as part of the U.S. Post Office property (discussed previously), and was labeled as a training and safety center. In the 1970 Sanborn map, the area to the east of Main Street, adjacent to the Alameda Triangle, remained depicted as developed with a parking lot, fire station, and training and safety center.

Alpine Tower

In the 1888 and 1984 Sanborn maps, the area of the proposed Alpine Tower, on the eastern side of Alameda Street between the present-day Alpine Street and College Street is depicted as Naud's Warehouse (warehousing for general merchandise, wool, grain, brandy, and wine) and a mixture of undeveloped lots with scattered stores and dwellings/tent camps that are labeled as Beard's Proposed Sub Division. In the 1906 Sanborn map, on the eastern side of Alameda Street, in the area of the present-day parking lot (proposed Alpine Tower location) and Homeboy Industries (130 West Bruno Street), Union Warehouse Co. is depicted as developed for general storage, and SPRR switch yard tracks are depicted as developed (including a refuse furnace). In the 1950 Sanborn map, the warehouse is depicted as used for burlap bag manufacturing; and in the 1957 and 1964 Sanborn maps, the warehouse is depicted as used for fireplace fixture manufacturing (1060 North Alameda Street) and bottle storage. In the 1970 Sanborn map, the buildings have been removed from the eastern side of Alameda Street, and the area is labeled as parking, with the SPRR switch yard tracks to the north.

In the 1888 Sanborn map, the western side of Alameda Street is depicted as developed with commercial uses and a dwelling. In the 1894 Sanborn map, the western side of Alameda Street, north of Alpine Street, is depicted as developed with Pacific Brass Works, with a machine shop containing a gas engine, a plating area, and brass foundry, a cobbler, warehouse, vacant building, upholstering, barber, dwellings, and a salon. In the 1906 Sanborn map, the area of the present-day The Metro at Chinatown Senior Lofts (808 North Spring Street), is depicted developed with a furniture warehouse, including a boiler in the basement that is 'not used.'. The area of the present-day multi-tenant commercial property (818 North Spring Street) is depicted developed as Standard Salt, labeled as provided with electric power. In the 1950, 1957, 1964, and 1970 Sanborn maps, this area on the western side of Alameda Street is depicted as 808 Spring Street Building-County of Los Angeles Offices, a macaroni manufacturing facility, and a 'gas and oil' (gasoline) station (832 North Spring Street). In the 1970 Sanborn map, the area of the present-day The Shop multi-tenant commercial/retail property is depicted as developed with commercial manufacturing and warehouse uses.

Chinatown/State Park Station

In the 1888 Sanborn map, the area of the proposed Chinatown/State Park Station is depicted as developed with railroad tracks that are part of the SPRR yard and shops property (present-day Los Angeles Historic State Park). The 1894 Sanborn maps do not provide coverage of the location of the proposed Chinatown/State Park Station. In the 1906 Sanborn map, the area of the proposed Chinatown/State Park Station is depicted as developed with railroad tracks, an iron viaduct (not used), and a portion of SPRR's office and freight warehouse. On the 1950, 1957, 1964, and 1970 Sanborn maps, the iron viaduct is no longer depicted, and the area remains developed with railroad tracks and a portion of SPRR's office and freight warehouse.

In 1888 Sanborn map, the eastern side of Alameda Street (presently Spring Street), to the southeast of the proposed station location, is depicted as a mixture of undeveloped lots with scattered stores and dwellings/tent camps, and is labeled as Beaudry's Proposed Sub Division. The 1894 Sanborn maps do not provide coverage of the area on the eastern side of Alameda Street (presently Spring Street). In the 1906, 1957, 1964, and 1970 Sanborn maps, the eastern side of Alameda Street, in the area of the present-day vacant lot (924 North Spring Street), is depicted developed with SPRR's main railroad track running in the ROW, a freight house adjacent to the east of the ROW, and additional railroad tracks.

In the 1888 Sanborn map, the northwestern side of Alameda Street (presently Spring Street), in the area between the present-day College Street and the southernmost point of Los Angeles State Historic Park, is depicted as developed with dwellings and the present-day Capitol Milling (1231 North Spring Street) merchant flour mill and warehouse. The online PAIS database indicates that Capitol Milling was originally constructed in 1888. The 1894 Sanborn maps do not provide coverage of the northwestern side of Alameda Street (presently Spring Street). In the 1906 Sanborn map, the Capitol Milling property is depicted as having coal as fuel, steam power, and electric power for lights; to the north of the Capitol Milling property are railroad yard support buildings, including offices and carpenter shop. In the 1950 Sanborn map, the Capitol Milling property is depicted as having gas as fuel, and additional railroad yard support buildings (1251 North Spring Street) are depicted, including carpenter shop, lumber storage, blacksmith, sign painting, auto repairing, and steel storage. A 'gas and oil' (gasoline) station (901 North Spring Street) is depicted developed in the area of the present-day Blossom Plaza (900 North Broadway). In the 1957 Sanborn map, railroad yard support buildings uses in this area remain depicted similar to the previous map. In the 1964 and 1970 Sanborn maps, the present-day commercial property (1251 North Spring Street) is depicted as redeveloped with truck maintenance and truck washing uses.

Los Angeles State Historic Park

In the 1888 and 1894 Sanborn maps, the present-day Los Angeles State Historic Park is depicted as densely developed with numerous railroad tracks and multiple buildings and structures associated with the SPRR yard and shops property, which is bordered to the northwest by the wide channel of the Zanja Madre (no longer visible in 1894), and then the bluff along which present-day North Broadway (formerly

known as Buena Vista Street) railroad tracks are depicted. In the central portion of the SPRR property is a roundhouse, which included 26 stalls and tracks. To the south of the roundhouse are a sand house, a 50,000-gallon water tank, and wood and coal shed; and to the north are machine/forge shops and storage areas/rooms. In the 1906 Sanborn map, the roundhouse is depicted as approximately one-third the original size and is labeled as vacant, and many of the support structures and shops had been demolished. In the 1950, 1957, 1964, and 1970 Sanborn maps, the roundhouse is no longer depicted, and the area is shown with numerous railroad tracks.

Broadway Junction

The 1888 Sanborn map did not provide coverage of the area of the proposed Broadway Junction. In the Sanborn maps dated 1894 and 1906, in the area of the proposed Broadway Junction on the northern side of present-day North Broadway (formerly known as Buena Vista Street), dwellings were depicted adjacent to the east of the present-day Bishops Road, and Calvary Cemetery was depicted to the west, in the area of present-day Cathedral High School (1253 Bishops Road). In the Sanborn maps dated 1950 and 1957, the 1201 North Broadway property, currently occupied for commercial office use (APNs 5414-021-001 and 5414-021-007), is depicted as developed with an automotive sales and service facility (with areas labeled auto service, sales room, and automotive repair & painting) and residential dwellings (APNs 5414-021-008, and 5414-021-021). Single and multi-family residences are depicted in the area to the north and northeast, and a commercial office building to the east (1231 North Broadway), and the present-day Cathedral High School is depicted as developed on the western side of Bishops Road, with a used auto sales lot (1201 Bishops Road) in the southwestern corner. In the 1957, 1964, and 1970 Sanborn maps, the northern building on the 1201 North Broadway property (APN 5414-021-001), labeled as automotive repair & painting, is identified with a “metal paint spray booth.”. In the 1964 and 1970 Sanborn maps, the former residential dwellings in the southeastern portion of the 1201 North Broadway property (APNs 5414-021-008 and 5414-021-021) are no longer present, and this area is depicted as parking.

Stadium Tower and Dodger Stadium Station

The area of the proposed Stadium Tower and proposed Dodger Stadium Station was not included in the 1888, 1894, 1906, 1950, and 1957 Sanborn maps. In the 1964 and 1970 Sanborn maps, the general area is labeled as Los Angeles Dodgers Ball Park; however, the maps did not include details pertaining to structures or features associated with the ballpark.

5.1.3 Aerial Photograph Review

The aerial photograph review for the area of the proposed Project is presented chronologically below:

- Dated 1923: The area of the proposed Alameda Station appears, and is shown developed with apparent commercial buildings to the west of Alameda Street, and with apparent small residential-type structures and railroad tracks to the east in the area of the present-day LAUS. Apparent commercial buildings are developed along the western side of Alameda Street northward, with more apparent industrial facilities developed along the eastern side of Alameda Street. Evidence of the historical mill and lumber yard is shown in the area of the present-day USPS Terminal Annex (900 North Alameda Street) and present-day The California Endowment (1000 North Alameda Street). Evidence of the historical railroad switch yard tracks is shown in the area of the present-day parking lot, Homeboy Industries (130 West Bruno Street), and proposed Alpine Tower location. The historical Capital Milling (1231 North Spring Street) facility and apparent industrial buildings adjacent to the north are shown. The present-day Los Angeles State Historic Park is shown with historical railroad tracks of the SPRR’s Freight Yards. The area of present-day Cathedral High School (1253 Bishops Road) is shown developed with apparent residential structures. The area of the proposed Stadium Tower and proposed Dodger Stadium Station is shown as undeveloped land with surrounding residential uses.

- Dated 1928: The area of the 1201 North Broadway property and proposed Broadway Junction is shown redeveloped with evidence of the historical automotive dealership (discussed in Section 6.3). Railroad tracks remain evident in in the area of the present-day LAUS.
- Dated 1938: In the area of the proposed Alameda Station, the historical Los Angeles Union Passenger Terminal is shown under development. In the area of the present-day parking lot, Homeboy Industries (130 West Bruno Street), and proposed Alpine Tower, the historical warehouse building is shown developed. The present-day Cathedral High School (1253 Bishops Road) is shown under development, including the athletic field.
- Dated 1948: The present-day USPS Terminal Annex (900 North Alameda Street) facility is shown developed similar to present day.
- Dated 1952: The area of the present-day The California Endowment (1000 North Alameda Street) appears developed with a parking structure and/or surface parking lots. Grading activities are shown in the area of the present-day Dodger Stadium.
- Dated 1964: Dodger Stadium is shown as developed.
- Dated 1970: West of Alameda Street in the area of the proposed Alameda Tower, the historical store building and historical building occupied by LA County Mechanical Department appears present, and the northern portion of the same block appears to be undergoing grading activities.
- Dated 1972: North of the proposed Alameda Tower is shown developed with the present-day building occupied by Los Angeles County Fleet Services (1055 North Alameda Street).
- Dated 1977, 1979, and 1981: No significant changes are noted.
- Dated 1989 and 1994: Portions of the historical railroad tracks of the SPRR's Freight Yards in both the area of the present-day vacant lot (924 North Spring Street) and the present-day Los Angeles State Historic Park property are shown undergoing decommissioning.
- Dated 2002: The area of the present-day The California Endowment (1000 North Alameda Street) appears developed with one remaining parking garage and a surface parking lot. The historical railroad tracks at the present-day Los Angeles State Historic Park property are shown decommissioned and no longer present, and the present-day Metro L Line (Gold) light rail is shown developed.
- Dated 2005: The present-day Mozaic Apartments (200-246 Cesar E Chavez Avenue) appeared developed. The area of the present-day vacant lot (924 North Spring Street) and the present-day MST School Bus Driver Training property (130 West College Street) are both shown used similarly to their present parking lot uses.
- Dated 2009 and 2012: The present-day vacant lot (924 North Spring Street) is shown as a vacant lot, no longer shown with a parking lot use. The California Endowment (1000 North Alameda Street) buildings are shown developed as at present-day. The present-day Los Angeles State Historic Park appears under development.
- Dated 2016: The present-day Los Angeles State Historic Park is shown developed, similar to its present-day configuration.

5.2 Previously Prepared Environmental Reports

The following previously prepared environmental reports were provided for review for this assessment, as summarized below. Copies of the previously prepared environmental reports are included in Appendix B.

Phase I Environmental Site Assessment, 1201-1221 North Broadway and 442-448 East Savoy Street, Los Angeles, California, dated June 4, 2003, prepared by Ninyo & Moore Geotechnical and Environmental Sciences Consultants (Ninyo & Moore) of Irvine, California, prepared for Johnson Fain, Project No. 204809001.

Ninyo & Moore's 2003 Phase I ESA report was included as an attachment to a Phase I ESA report by Arcadis in 2019 (discussed below), and was prepared in accordance with ASTM E1527-00. This report was prepared for the 1201 North Broadway property, which is the location of the proposed Broadway Junction.

At the time of Ninyo & Moore's assessment, the 1201 North Broadway property was occupied by Domenich Basso, Inc., Chrysler/Jeep automotive dealership for car sales, leasing, and servicing purposes, which included a sales office, a parts storage area, a service bay area, an automotive body shop area, and a paved parking area. This automotive dealership had reportedly occupied the property since 1924. Based on the results of their Phase I ESA, Ninyo & Moore identified RECs associated with the 1201 North Broadway property including: ten subsurface hydraulic lifts in the service area; a three-stage clarifier in the service area, which received runoff from vehicle washing activities; areas of staining noted near the vicinity of each of the five ASTs – including a 1,000-gallon gasoline AST in the southeastern portion, a 300-gallon motor oil AST and a 120-gallon automatic transmission fluid AST in the service area (no secondary containment), and a 250-gallon waste oil AST and a 150-gallon waste antifreeze AST in the northwestern exterior portion; areas of staining noted in the paint storage areas in the body shop and drum storage area (compressor room) in the service area; areas of staining noted in the vicinity of the parts cleaners in the service area; an inactive spray booth in the body shop; and four USTs that were reported to have been removed in 1968 (LAFD records obtained by AECOM indicated that these four USTs were actually located off-site at 1201 South Broadway and not on the 1201 North Broadway property). Ninyo & Moore recommended that a subsurface investigation be conducted to "document the condition of the soil in the vicinity of the identified on-site sources of hazardous materials or petroleum products."

Ninyo & Moore reviewed a letter report dated September 17, 2001, prepared by FREY Environmental, Inc. (FREY) for the LAFD. The letter report indicated that soil sampling had previously been conducted at the 1201 North Broadway property by Athanor Environmental Services, Inc. (AES), as summarized in letter reports from 1999. A copy of these letter reports was obtained by AECOM from LAFD records, as discussed in Section 6.3.1. In 1999, AES advanced two soil borings to a depth of 20 feet bgs: one in the vicinity of a former 1,000-gallon gasoline UST that was located beneath the sidewalk along North Broadway, and a 200-gallon waste oil UST that was located inside the service shop. Soil samples collected were analyzed for total recoverable petroleum hydrocarbons (TRPH); total petroleum hydrocarbons as gasoline (TPH-g); benzene, toluene, ethylbenzene, and total xylenes (BTEX); and methyl tert-butyl ether (MTBE). TPH-g was detected at 970 milligrams per kilogram (mg/kg), and xylene was detected at 28 mg/kg in the vicinity of the former gasoline UST. TPH-g, BTEX, and MTBE were not detected in the other soil samples analyzed. AES recommended further subsurface investigation to define the lateral and vertical extent of petroleum hydrocarbons in the area of the former gasoline UST. The purpose of the 2001 FREY investigation was to further assess the extent of TPH detected in the area of the former gasoline UST. FREY advanced two additional borings inside the building in the vicinity of the former gasoline UST to depths of 25 and 28 feet bgs, respectively. Additional borings were attempted in the sidewalk area of North Broadway, but were met with refusal due to the presence of piping (presumed) at 5 feet bgs. Soil samples collected were analyzed for TPH-g, BTEX, and MTBE. TPH-g was detected at a low concentration of 9.1 mg/kg at 28 feet bgs in one boring location. The other constituents analyzed for were not detected. Based on the analytical results, FREY concluded that the low concentrations of petroleum hydrocarbons in soil were limited, and no further action was required. The FREY report was submitted to the LAFD for review, and the LAFD subsequently issued a No Further Action (NFA) letter dated November 28, 2001 (discussed further below). A copy of the 2001 NFA is included as Appendix C.

Phase II Subsurface Investigation, 1201-1221 North Broadway and 442-448 East Savoy Street, Los Angeles, California, dated July 2, 2003, prepared by Ninyo & Moore, prepared for Johnson Fain, Project No. 204809002.

In 2003, Ninyo & Moore performed a Phase II subsurface investigation at the 1201 North Broadway property based on the results of their Phase I ESA (discussed above). Twenty-five soil borings were advanced at the site, and soil samples collected were analyzed for one or more of the following: TPH,

volatile organic compounds (VOCs), metals, BTEX, and/or MTBE. TPH (C23-C33 range) was detected in two of the soil borings collected from the area of the former in-ground hydraulic lifts (HL2 and HL4 in the western side of building along Bishops Road) at concentrations ranging from 6,700 mg/kg to 27,000 mg/kg at depths of approximately 10 to 20 feet bgs. Bedrock was reported to be present at approximately 15 to 20 feet bgs; therefore, Ninyo & Moore reported that the extent of heavy petroleum hydrocarbons in soil appeared to be limited to the immediate vicinity of the two hydraulic lifts.

Laboratory results also indicated concentrations of TPH-g (37 to 150 mg/kg at 18 to 20 feet bgs), toluene (22 micrograms per kilogram [µg/kg] at 20 feet bgs, ethylbenzene (160 to 710 µg/kg at 18 to 20 feet bgs), and xylene (347 to 2,400 µg/kg at 18 to 20 feet bgs) in soil samples collected in the vicinity of the former gasoline UST that was located under the sidewalk along North Broadway. Based on these results and the results from previous investigations (discussed above), Ninyo & Moore concluded that the concentrations appeared to be limited to the immediate area of the former gasoline UST, and that the concentrations appeared to be low, and in their opinion would not be of concern to a regulatory agency. Since closure had been granted by the LAFD for the former gasoline UST, Ninyo & Moore stated that no further action regarding the former gasoline UST was warranted.

Asbestos and Lead-Based Paint Survey, 1201-1221 North Broadway and 442-448 East Savoy Street, Los Angeles, California, dated July 2, 2003, prepared by Ninyo & Moore, prepared for Johnson Fain, Project No. 204809003.

In 2003, an asbestos survey and lead-based paint (LBP) survey were conducted of the North Broadway property, which was used as an automotive dealership prior to renovation activities. Fifty-three samples of suspect building material were collected and analyzed for asbestos, and 276 readings were conducted of potential LBP. Asbestos-containing materials (ACMs) detected included floor tile and associated mastic in the sales office area, acoustical ceiling plaster in the showroom, window putty located throughout, roofing materials, plastic roof cement on roof penetrations, and two Transite flue pipes (one near the gasoline AST, and the other on the southwestern portion of the roof). ACMs throughout the facility were noted to be in good condition. LBP was also detected throughout the facility on brick walls, metal doors, plaster walls and ceilings, tile surfaces, wood baseboards, wood cabinet and door components, wood handrail, railing, riser, and stringer, wood window components, metal bollards, metal doors, metal downspouts, metal window frames, and metal window sashes. The painted surfaces were reported to be intact, except for the wood railing, riser, and stringer in the parts department, and a metal door on the western perimeter of the building, which were noted to be “damaged”. It was recommended that the ACM and LBP should not be disturbed, and that prior to renovation or demolition work, licensed removal contractor(s) should remove the ACM and LBP.

Phase I Cultural Resources Study, 1201 North Broadway Project, City of Los Angeles, CA, initially prepared circa 2015 by ESA of Los Angeles, California, preliminary – subject to revision.

Historical source information obtained in the study report was reviewed, including historical maps and photographs for the area of 1201 North Broadway, which is summarized as part of this assessment, where applicable.

Initial Study/Mitigated Negative Declaration, 1201 N. Broadway, Los Angeles, CA 90012, prepared for City of Los Angeles, dated May 20, 2017, Case No. ENV-2016-4076-MND.

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for a potential mixed-use redevelopment project of APNs 5414-021-007, 5414-021-008, and 5414-021-021 of the 1201 North Broadway property, which was adopted by the City of Los Angeles.

The IS/MND included the following mitigation measures in regard to hazards and hazardous materials at the 1201 North Broadway property:

- Health and Safety Plan: The project applicant shall require the construction contractor to retain a qualified environmental professional to prepare and implement a site-specific Health and Safety

Plan in accordance with federal OSHA regulations (29 Code of Federal Regulations [CFR] 1910.120) and Cal/OSHA regulations (8 California Code of Regulations [CCR] Title 8, Section 5192). The Health and Safety Plan shall include all required measures to protect construction workers and the general public potentially exposed to hazardous materials by including engineering controls, monitoring, and security measures to prevent unauthorized entry to the construction area, and to reduce hazards outside of the construction area. If prescribed contaminant exposure levels are exceeded, personal protective equipment shall be required for workers in accordance with State and federal regulations. The plan shall include designated personnel responsible for implementation of the Health and Safety Plan. Submittal of the Health and Safety Plan to the project applicant shall not be construed as approval of the adequacy of the contractor's health and safety professional, the contractor's plan, or any safety measure taken in or near the construction site. The contractor shall be solely and fully responsible for compliance with all laws, rules, and regulations applicable to health and safety during the performance of the construction work.

- Soil and Groundwater Management Plan: The project applicant shall require the construction contractor to prepare and implement a Soil and Groundwater Management Plan, subject to review by the project applicant, that specifies the method for handling and disposal of contaminated soil and groundwater prior to demolition, excavation, and construction activities. The plan shall include all necessary procedures to ensure that excavated materials and fluids generated during construction are stored, managed, and disposed of in a manner that is protective of human health and in accordance with applicable laws and regulations. The plan shall include the following information:

  - Step-by-step procedures for evaluation, handling, stockpiling, storage, testing, and disposal of excavated material, including criteria for reuse and off-site disposal. All excavated materials shall be inspected prior to initial stockpiling, and spoils that are visibly stained and/or have a noticeable odor shall be stockpiled separately to minimize the amount of material that may require special handling.
  - Procedures to be implemented if unknown subsurface conditions or contamination are encountered, such as previously unreported tanks, wells, or contaminated soils.

  Detailed control measures for use and storage of hazardous materials to prevent the release of pollutants to the environment, and emergency procedures for the containment and cleanup of accidental releases of hazardous materials to minimize the impacts of any such release. These procedures shall also include reporting requirements in the event of a reportable spill or other emergency incident. At a minimum, the project applicant or its contractor shall notify applicable agencies.

Draft Phase I Environmental Site Assessment Report, 1201-1217 N. Broadway and 430-430½ Savoy Street, Los Angeles, California 90012, dated February 4, 2019, prepared by Arcadis U.S., Inc. (Arcadis) of Irvine, California, Ref.: CCM012017.0000.

Arcadis conducted a Phase I ESA of the above-referenced property in accordance with ASTM E1527-13. It should be noted that the 2019 report provided for review is marked 'Draft.' Arcadis' report included 430-430 ½ Savoy Street (APN 5414-021-004), which is occupied by a vacant single-family residence, that is not a part of the proposed Project, and therefore, is not included as part of AECOM's assessment, or discussed further.

Arcadis' historical findings of this property are similar to AECOM's own independent historical research. Arcadis found that in at least the 1890s, the 1201 North Broadway property was developed with residential use. Circa 1924, a portion of the property (APNs 5414-021-001 and 5414-021-007) was redeveloped with an automotive dealership that operated until 2003, when it was converted to commercial office use. On-site residential use structures (APNs 5414-021-008 and 5414-021-021) were demolished in the 1960s for the existing parking lot.

Arcadis identified that the former automotive dealership operated a former 200-gallon waste oil UST that was located in the western portion of the service area of the building, and a former 1,000-gallon gasoline UST that was located under the sidewalk associated with the North Broadway ROW. These tanks were reportedly installed in the 1940s, and the 1,000-gallon gasoline UST was removed in 1991 and the 200-gallon UST in 1993, under regulatory oversight by the LAFD. At the time of removal of the USTs, soil sampling was reportedly conducted, but no formal closure was issued by the LAFD; therefore, additional soil sampling was conducted between 1999 and 2001, after which an NFA was issued by the LAFD. Additional historical features identified in connection with the automotive dealership included a former three-stage clarifier, a former paint spray booth and paint storage, a former auto body shop, a former service area, former in-ground hydraulic lifts, and a former 1,000-gallon gasoline AST and associated former gasoline pump island.

Arcadis noted that in 1999 through 2003, soil investigations were conducted at the property to assess potential impacts from the historical features identified in connection with the former automotive dealership, as discussed previously. Soil samples were collected throughout the former dealership property and analyzed for TPH; VOCs, including BTEX; MTBE; and metals. The maximum depth that soil samples were obtained was 28 feet bgs. As discussed previously, low concentrations of TPHs were detected in soil samples collected from the areas of the former 1,000-gallon gasoline UST, former motor oil and automatic transmission fluid ASTs, former compressor room, former clarifier, and four of the approximately 11 former in-ground hydraulic lifts. Although Arcadis identified de minimis and non-ASTM conditions (i.e., potential remnant septic systems, potential deposition of airborne contaminants over time, location in a methane zone or methane buffer zone, potential presence of asbestos and LBP, Arcadis identified no CRECs or HRECs in connection with the 1201 North Broadway property. Arcadis identified the detectable concentrations of TPH in soil for the 1201 North Broadway property as a REC, but concluded that the concentrations were low and unlikely to warrant regulatory oversight. Arcadis recommended that, should the impacted soil be excavated and removed from the property, special handling would be required, and recommended that a Soil Management Plan (SMP) be developed.

5.2.1 Conclusions Based on Previously Prepared Environmental Reports

Based on LAFD records obtained as part of this assessment and also reviewed by Ninyo & Moore in their Phase I ESA, in 1999, soil samples analyzed from depths of 18 and 20 feet bgs from the area of the former 1,000-gallon gasoline UST resulted in concentrations of TPH-g of 37 and 150 mg/kg, respectively, as well as toluene at 22 µg/kg at 20 feet bgs, ethylbenzene at 160 to 710 µg/kg at 18 to 20 feet bgs, and xylene at 347 to 2,400 µg/kg at 18 to 20 feet bgs. Ninyo & Moore stated in their Phase I ESA that the detections of gasoline constituents in the location of the former gasoline UST were limited to the immediate area of the former UST, and that the concentrations of contaminants detected were low, and in their opinion, would not be of concern to a regulatory agency. Ninyo & Moore further stated that since the former UST was closed by the LAFD, no further action regarding the former UST was warranted. AECOM concurs with Ninyo & Moore's conclusion; however, it should be noted that as part of the proposed Project for the proposed Broadway Junction, although the maximum depth of excavation is only 7 feet bgs, the maximum depth of utilities is 10 feet bgs, and the maximum depth of drilled piles at the Broadway Junction location is to 120 feet below pile depth. Therefore, residual petroleum hydrocarbons may be encountered in the area of the former gasoline UST at the 1201 North Broadway property as part of the construction of the proposed Broadway Junction.

Based on AECOM's research, the former automotive dealership, identified as Domenich Basso in the online GeoTracker database, is listed with a completed-closed Leaking UST (LUST) case. The facility received regulatory case closure in 2001 from the LAFD (the lead regulatory agency) for gasoline impacts to site soils. An NFA letter, dated November 28, 2001, was provided in the records received by AECOM from the LAFD. No other information is available in the online GeoTracker database. The NFA status of the LUST case is considered to present an HREC in connection with the proposed Project. See Section 6 for further discussion. A copy of the 2001 NFA is included as Appendix C.

Based on AECOM's review of the most recent soil investigation conducted by Ninyo & Moore dated 2003, provided as an attachment to Arcadis' 2019 draft Phase I ESA, a soil sample analyzed from the area of the former motor oil and automatic transmission fluid ASTs from a depth of 5 feet bgs resulted in a concentration of TPH of 10 mg/kg. Soil samples analyzed from the areas of the former compressor area and former clarifier from depths of 10 feet bgs each, resulted in concentrations of TPH of 11 mg/kg each. Soil samples analyzed from the area of the former gasoline UST from depths of 18 to 20 feet bgs resulted in concentrations of TPH-g and BTEX ranging from 37 to 150 mg/kg and 22 to 2,400 µg/kg, respectively. Soil samples analyzed from the areas of the former lifts from depths of 15 to 20 feet bgs resulted in concentrations of TPH ranging from 10 to 27,000 mg/kg. Ninyo & Moore concluded that based on the results of samples analyzed in proximity to the hydraulic lifts, and the apparent presence of a rock formation at approximately 15 to 20 feet bgs, that the extent of hydrocarbon contamination in the area of the lifts appeared to be limited to the immediate vicinity of two individual hydraulic lifts. It was also noted that the soil samples collected in the area of the former lifts were not analyzed for PCBs. Ninyo & Moore did not discuss the low concentrations of TPH detected at the compressor area and/or the clarifier. Based on available information, residual concentrations of TPH may still exist on-site in the areas of the former lifts and gasoline UST. Therefore, the TPH impacts to soil left in-place at the 1201 North Broadway property (proposed Broadway Junction location) are considered to present a REC to the proposed Project.

6. Database and Records Review

6.1 User Provided Information

Section 6 of ASTM E1527-13 states that certain tasks, which will help to determine the possibility of RECs associated with the proposed Project, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations, and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the proposed Project, or significant reduction in the purchase price of the parcels in the proposed Project. Per the agreed scope of work, information related to these items should be provided by the Phase I ESA report user to AECOM. On August 4, 2021, Mr. John Heintz with Latham & Watkins provided AECOM with a completed ASTM 1527-13 User Questionnaire that summarized their knowledge of title records, environmental liens, specialized knowledge, and/or real estate value reduction issues associated with the proposed Project. Mr. Heintz indicated that there are environmental liens and/or activity use limitations on portions of the proposed Project (discussed further in Section 6.2). Mr. Heintz stated that he did not have specialized knowledge or experience that is material to RECs in connection with the proposed Project. The ASTM 1527-13 User Questionnaire is included as Appendix D.

6.2 Title Records/Environmental Liens

Title searches and environmental lien searches were ordered for those parcels impacted by the proposed Project. Based on preliminary design, these parcels include 5409-023-941 (proposed location for construction support space and vertical circulation elements for Alameda Station); 5409-008-909 (proposed location for Alpine Tower); 5414-016-903 (Los Angeles State Historic Park; proposed location for the Chinatown/State Park Station); 5414-021-001, 5414-021-007, 5414-021-008, and 5414-021-021 (1201 North Broadway; proposed location for the Broadway Junction); and 5415-018-016 (proposed location for the Dodger Stadium Station and Stadium Tower). The title and environmental lien searches obtained from EDR are provided in Appendix E.

6.2.1 Alameda Station

The proposed Alameda Station would include vertical circulation elements for pedestrian access, which would also serve as queuing areas to the station, that would be introduced at-grade north of Placita de Dolores on the west, and in the planned LAUS Forecourt on the east. On the El Pueblo side (west) of Alameda Street, construction activities would occur on City-owned property that is part of the ROW, and does not have a designated APN based on review of County and City online databases. Therefore, a title search and environmental lien search were not conducted for this area.

On the LAUS side (east) of Alameda Street, construction activities would occur on privately owned property that is part of the LAUS property (APN 5409-023-941). The EDR Environmental Lien and Activity and Use Limitations (AUL) Search report did not identify environmental liens or other AULs that have been recorded on APN 5409-023-941. According to deed information included in the EDR Environmental Lien and AUL Search report, title to APN 5409-023-941 is currently vested to Los Angeles County Metropolitan Transportation Authority (LACMTA), which received title in 2011 from Prologis Logistics Services Inc.

The following table provides a summary of the chain of title for APN 5409-023-941:

Table 2: Summary of the Historical Chain of Title for APN 5409-023-941

Date	Title vested in	Title Received From
1990	Union Pacific Land Resources Corporation	UPRR Company
1990	Santa Fe Pacific Realty Corporation	Union Pacific Land Resources Corporation
1992	Catellus Development Corporation	The Southern California Rapid Transit District
1999	Catellus Development Corporation	Catellus Development Corporation
2011	Prologis Logistics Services Incorporated	Catellus Operating Limited Partnership, Successor in interest by merger to Catellus Development Corporation, as successor by merger to Santa Fe Pacific Realty Corporation
2011	Los Angeles County Metropolitan Transportation Authority	Prologis Logistics Services Incorporated

6.2.2 Alameda Tower

The proposed Alameda Tower would be constructed on the Alameda Triangle, a City-owned property (part of the ROW) between Alameda Street, North Main Street, and Alhambra Street. Review of County and City online databases indicate that this City-owned property is part of the ROW, and does not have a designated APN. Therefore, a title search and environmental lien search were not conducted for this area.

6.2.3 Alpine Tower

The proposed Alpine Tower would be located on a City-owned parcel at the northeastern corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold). The City-owned parcel includes APN 5409-008-909 (901 North Main Street). The EDR Environmental Lien and AUL Search report did not identify environmental liens or other AULs that have been recorded on the Alpine Tower parcel (APN 5409-008-909).

According to deed information included in the EDR Environmental Lien and AUL Search report and the EDR Chain of Title report, title to APN 5409-008-909 is currently vested to the City of Los Angeles, which received title in 2019 from City of Los Angeles for the benefit of the Department of General Services. The City of Los Angeles acquired APN 5409-008-909 sometime prior to 1980.

6.2.4 Chinatown/State Park Station

The southern portion of the proposed Chinatown/State Park Station would be located on City-owned property (part of the ROW). Review of County and City online databases indicate that this City-owned property is part of the ROW and does not have a designated APN. Therefore, a title search and environmental lien search were not conducted for this area.

The northern portion of the proposed Chinatown/State Park Station would be integrated into the southern boundary of the Los Angeles State Historic Park (APN 5414-016-903). According to deed information included in the EDR Environmental Lien and AUL Search report, title to APN 5414-016-903 is currently vested to The State of California, acting by and through The Department of Parks and Recreation

(Grantor), which received title from River Station, LLC, formerly known as Majestic Cornfield, LLC in 2001.

The EDR Environmental Lien and AUL Search report identified an AUL associated with APN 5414-016-903. The Grant Deed dated 2001 included in the EDR Environmental Lien and AUL Search report states:

> "Pursuant to that certain Covenant and Agreement dated August 17, 2001 and recorded on August 21, 2001 in the Official Records of Los Angeles County as Instrument No. 11547441 by Grantor in favor of UP, Grantee covenants and agrees with Grantor for the benefit of Grantor and UP, that the Property shall be used only for industrial activities including but not limited to manufacturing, warehousing, processing, fabrication, commercial activities, and administrative activities in support of industrial use of the Property. This covenant shall run with the land, shall inure to the benefit and pass with each and every portion of the Property, and shall apply to and bind the respective successors-in-interest of Grantee. Notwithstanding this restriction on use, Grantee or any successor to Grantee may change or apply to change the use, operation or zoning of all or any portion of the Property to a use or zoning which may require remediation standards more stringent that industrial (such as residential, private or recreational uses), provided, however, Grantee or any successor to Grantee will be solely responsible, at its cost and expense, to remediate the Property (or cause the Property to be remediated) to any more stringent level required by the appropriate "Jurisdictional Agency" in connections with such change or proposed change in use, operation or zoning. "Jurisdictional Agency" shall mean any of the governmental agencies have jurisdiction with respect to the Property including, without limitation, the California Regional Water Quality Control Board or the California Department of Toxic Substances Control."

The following table provides a summary of the chain of title for APN 5414-016-903:

Table 3: Summary of the Historical Chain of Title for APN 5414-016-903

Date	Title vested in	Title Received From
2001	River Station LLC	UPRR Company
2001	The State of California, acting by and through The Department of Parks and Recreation	River Station, LLC, formerly known as Majestic Cornfield, LLC

6.2.5 Broadway Junction

The proposed Broadway Junction would be located on privately owned property (1201 North Broadway), which is currently occupied for commercial office use with an associated parking lot. The 1201 North Broadway property includes APNs 5414-021-001, 5414-021-007, 5414-021-008, and 5414-021-021. The EDR Environmental Lien and AUL Search report did not identify environmental liens or other AULs that have been recorded on the 1201 North Broadway parcels (APNs 5414-021-001, 5414-021-007, 5414-021-008, and 5414-021-021).

According to deed information included in the EDR Environmental Lien and AUL Search report, title to APNs 5414-021-001, 5414-021-007, 5414-021-008, and 5414-021-021 is currently vested to BWAY Owner LLC, which acquired the parcels in 2019 from Fain Broadway LLC and Johnson Broadway LLC. The following table provides a summary of the chain of title for APNs 5414-021-001 and 5414-021-007 (current commercial office building at 1201 North Broadway):

Table 4: Summary of the Historical Chain of Title for APNs 5414-021-001 and 5414-021-007

Date	Title vested in	Title Received From
1977	Distributed to Alberta Boccalero and Alma Connolly	Estate of Domenich Basso

Table 4: Summary of the Historical Chain of Title for APNs 5414-021-001 and 5414-021-007

Date	Title vested in	Title Received From
1989	Joe C. Boccalero or Alberta Boccalero as trustee under agreement dated February 15, 1980	Alberta Boccalero

2019	BWAY Owner LLC	Fain Broadway LLC and Johnson Broadway LLC, as t/c

6.2.6 Stadium Tower and Dodger Stadium Station

The proposed Stadium Tower and proposed Dodger Stadium Station would be located on privately owned property (APN 5415-018-016) associated with Dodger Stadium. The EDR Environmental Lien and AUL Search report did not identify environmental liens or other AULs that have been recorded on APN 5415-018-016. The EDR Environmental Lien and AUL Search report indicates that title to APN 5415-018-016 is currently vested in MGSL Holding LLC, which received title in 2012 from Blue Landco LLC. The following table provides a summary of the chain of title for APN 5415-018-016.

Table 6: Summary of the Historical Chain of Title for APN 5415-018-016

Date	Title vested in	Title Received From
1955	The City of Los Angeles	The Housing Authority of The City of Los Angeles
1960	Los Angeles Dodgers, Inc.	The City of Los Angeles
2004	Realco Intermediary LLC	Los Angeles Dodgers, Inc.
2006	Blue Landco LLC	LA Real Estate LLC
2012	MGSL Holding LLC	Blue Landco LLC

6.3 Database Information

In accordance with the scope of work and ASTM E1527-13, a search of various governmental databases was conducted by EDR. EDR maintains a computerized Geographic Information System (GIS) listing of various state and federal databases in accordance with the ASTM standard. The environmental database search was based on ASTM-specified standard record sources. Descriptions of each database are provided in Part GR-1 of the environmental database report. ASTM also specifies the appropriate search distances from the proposed Project (i.e., alignment) for which these records should be reviewed. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the proposed Project.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Additional sites were identified in the database report; however, EDR was not able to map them to specific locations due to insufficient/ contradicting address information. These sites were included in the database report as "orphan" sites. Based on AECOM's review, there does not appear to be significant concerns associated with the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix F.

Based on information provided in the EDR database report, the proposed Project alignment is not located on or within a one-mile radius of tribal lands.

6.3.1 Summary of EDR Listings for the Proposed Project Alignment

During the agency database review, the following database listings were identified associated with the proposed Project alignment (from south to north).

- 1X Union Station Los Angeles (J63-J64) at Alameda & Macy Street (presently Cesar E. Chavez Boulevard) is located adjacent to the east of the proposed Alameda Station (APN 5409-023-941), and is one of the proposed locations for construction support space and vertical circulation elements for the Alameda Station. This property is listed in the HAZNET (Facility and Manifest Data) and Hazardous Waste Tracking System (HWTS) databases. This property was also identified with the address 800 North Alameda Street in the UST database (J64, X149), and as Metro Rail (L65-L66) in the Facility Index System (FINDS), Cleanup Program Sites-Spills, Leaks, Investigations, and Cleanups (CPS-SLIC), and California Environmental Reporting System (CERS); as Southern California Regional Rail Authority (X145) in the Resource Conservation and Recovery Act Non Generator / No Longer Regulated (RCRA NonGen / NLR) database; as SCRRA/Metrolink Union Station (X146) in the RCRA NonGen / NLR database; as Los Angeles Union Passenger Terminal (X147, X151-X152) in the Historical (HIST) UST, Statewide Environmental Evaluation and Planning System (SWEEPS) UST, California Facility Inventory Database UST (CA FID UST), Emissions Inventory Data (EMI), Los Angeles County Site Mitigation (LA Co. Site Mitigation), and Waste Discharge System (WDS) databases; as Union Station (X148, X153) in the RCRA NonGen / NLR and Superfund Enterprise Management System (SEMS)-ARCHIVE databases; as Metropolitan Transportation Authority Unit B (X150) in the RCRA NonGen / NLR database; as Amtrak/National Railroad Passenger Corp. (X154) in the RCRA NonGen / NLR database; and as Los Angeles Union Station (X155) in the RCRA-Large Quantity Generator (LQG) database. The address 810 North Alameda Street also appears to be associated with APN 5409-023-941, which was identified as AMTRAK (L67 to L68) in the UST and Hazardous Materials (HAZMAT) databases. The UST databases report that this facility formerly operated two heating oil USTs and one gasoline UST that were originally installed in the late-1930s. The CPS-SLIC case status is reported as closed as of August 16, 1996. A memorandum dated August 16, 1996, reviewed on the online GeoTracker database, states that soil impacted with TPH, maximum of 4,000 parts-per-million (ppm), was used for soil reuse on the property under the Regional Water Quality Control Board's approval in 1990, and the case was closed. A copy of the 1996 closure memorandum is included in Appendix G. No additional information was available in the online GeoTracker database. Based on the regulatory status (i.e., case closure), this site is not considered to present a REC to the proposed Project.
- El Pueblo de Los Angeles (U161) at 615 North Main Street is located adjacent to the west of the proposed Alameda Station, and is one of the proposed locations for the construction support space and vertical circulation elements for the Alameda Station. This property is listed in the US Brownfields and FINDS databases. The US Brownfields database indicates that a Phase I ESA was completed in 2018 to 2019. No additional information is reported. Based on the lack of listing in other databases, indicating further regulatory action required (i.e., EnviroStor, GeoTracker) and/or a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Alpine and Alameda (G19) at 901 North Main Street (APN 5409-008-909) is the location of the proposed Alpine Tower at the northeastern corner of the intersection of Alameda Street and Alpine Street, and is listed in the US Brownfields and FINDS databases. The US Brownfields database reports that a Phase I ESA was conducted at this property in 2018 to 2019. No additional information is reported. This address is also identified as LA Vehicle Storage Lot (G18) in the RCRA-Small Quantity Generator (SQG), FINDS, and Enforcement and Compliance History Online (ECHO) databases; as Chinatown Aerial Structure (G20) in the California Integrated Water Quality

System (CIWQS) database; and as City of LA General Services (G21) in the HAZNET and HWTS databases. No violations were reported. This property is currently occupied by a paved surface parking lot under the elevated Metro L Line (Gold) structure. Based on the lack of violations and/or listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.

- UPRR – Cornfield Yard (P116, P102)/Vacant (P101)/ Former Cornfield Rail Yard (P112)/California State Parks Los Angeles SHP (P113)/Cornfield Site (P114)/1245 North Spring Street (P115)/ Los Angeles State Historic Park (N90) is located at the Los Angeles State Historic Park property (APN 5414-016-903), which is the proposed location for the Chinatown/State Park Station, and is listed in the Leaking UST (LUST), HIST CORTESE, CPS-SLIC, RCRA NonGen / NLR, EnviroStor, Voluntary Cleanup Program (VCP), UST, National Pollutant Discharge Elimination System (NPDES), CIWQS, and CERS databases. This 50-acre site is the former SPRR (now UPRR) Company's Freight Yards, which included transfer station and storage yard activities that has been converted to use for the Metro L Line (Gold) (10-acre easement), Los Angeles State Historic Park (32-acre portion), and a vacant area that is planned for residential development (8-acre portion along the 40-foot high escarpment along North Broadway). The historical use of this property is discussed in Section 5.

  According to the database search report and the online GeoTracker database, the cleanup status of the CPS-SLIC case is reported as "Open - Verification Monitoring" as of July 8, 2010. An annual groundwater monitoring program was first implemented at the Los Angeles State Historic Park site in August 2000, at the request of the RWQCB. The most recent annual groundwater monitoring report (*2021 Annual Groundwater Monitoring Report and Request for No Further Action*) available on the online GeoTracker database was prepared in January 2022 by Arcadis, and according to the report, free-phase hydrocarbons were not detected during the 2021 annual monitoring event. During the 2021 annual monitoring event, depth to groundwater at the Los Angeles State Historic Park site ranged from 27.95 feet bgs (MW-19) to 60.07 feet bgs (MW-18); the location of these wells are depicted on Figure 5. Arcadis reported that the concentrations of fuel-related petroleum hydrocarbons and BTEX had generally decreased compared to previous annual groundwater monitoring events. Based on available maps, the groundwater monitoring wells located in close proximity to the proposed Chinatown/State Park Station are MW-2 and MW-19 (shown on Figure 5), which were not sampled during the 2021 annual monitoring event. During the 2021 monitoring event, depth to groundwater was not measured in MW-2, which was last measured in 2003, and at that time, groundwater was present a depth of 27.54 feet bgs. Groundwater was measured in MW-19 at a depth of 27.95 feet bgs in 2021. The highest concentrations of VOCs identified during the groundwater monitoring event were detected in BMW-4, consistent with prior monitoring events, which is great than ¼ mile northeast and upgradient of the proposed Chinatown/State Park Station location and wells MW-2 and MW-19. In well BMW-4, benzene was detected at a concentration of 1,970 µg/L, which is greater than the California maximum contaminant level (MCL) of 1 µg/L and ethylbenzene was detected at 1,340 µg/L, which is greater than the MCL of 300 µg/L. In well BMW-6, which is immediately downgradient of BMW-4 and closer to the Chinatown/State Park Station location, benzene was detected slightly above the MCL at a concentration of 2.14 µg/L (duplicate sample at 2.31 µg/L). Benzene had not been detected in well BMW-6 above the MCL since the 2016 monitoring event. Arcadis concluded that the concentrations in BMW-4 were limited in extent, and the remaining dissolved phase gasoline-range impacts to groundwater were stable given the long-term decreasing monitoring concentration trends and that natural attenuation was occurring; however, Arcadis did not consider the recent benzene detection in well BMW-6 above the MCL. Based on the analytical results, it is AECOM's opinion that the newly detected benzene concentration in well BMW-6 indicates that the plume may be migrating downgradient towards the proposed Project. Based on this information and lack of current groundwater data in the area of the proposed Chinatown/State Park Station, the groundwater impacts associated with the former use of the Los Angeles State Historic Park are considered to represent a REC to the proposed Project. It should be noted that as part of the proposed Project, the maximum excavation depth in the area of the proposed Chinatown/State Park Station is to approximately 10 feet bgs, and the maximum

depth of drilled piles is 80 feet below pile depth. Based on the anticipated depth to groundwater, it is considered unlikely that groundwater would be encountered during construction of the foundations for the Chinatown/State Park Station; however, because the proposed piles at this station would be drilled to 80 feet below pile depth, removal of nuisance water (water that seeps into boreholes), during construction may be required. Should groundwater be encountered during construction of the proposed Project, groundwater can be managed under a groundwater management plan. Furthermore, it is not anticipated that the groundwater monitoring wells in the Los Angeles State Historic Park property would be restricted during construction activities of the Chinatown/State Park Station; additionally, the wells would remain accessible during and after construction activities.

The cleanup status of the EnviroStor case is reported as active as of November 17, 2014. The EnviroStor database indicates that the Los Angeles State Historic Park entered into the VCP with the California Department of Toxic Substances Control (DTSC) in 2001. According to *Final Site Characterization Sampling Results for the 32-Acre Parcel of the Former Cornfield Rail Yard* prepared by The Shaw Group, Inc., dated June 17, 2002, soil sampling was conducted across the 32-acre park site in 2002, including the southwestern portion, which is the area of the Chinatown/State Park Station. The only soil sample location in close proximity to the proposed Chinatown/State Park Station was G-1, at which a shallow soil sample was collected between 0.5 and 1.5 feet bgs, 5 feet bgs, and 10 feet bgs for lead and arsenic analysis. The analytical results indicated arsenic concentrations between 1.0 and 1.9 milligrams per kilogram (mg/kg), and lead concentrations between 1.6 and 2.8 mg/kg, which did not require a removal action in this area. Based on the soil sampling results, soil removal action was completed in select locations in 2003, which did not include the area of the proposed Chinatown/State Park location. According to *a Supplemental Remedial Action Workplan Memorandum* prepared by Group Delta Consultants, Inc. in 2015, during construction of the state park in 2014, arsenic and lead contamination was encountered in near surface soils, and additional soil removal action was completed in 2015 in selected portions of the Los Angeles State Historic Park site, but additional removal action was required in the northeastern portion. Cleanup goals for lead (400 mg/kg) and arsenic (30 mg/kg) in soil have been established for the park site. It is anticipated that a complete Removal Action Completion Report for the entire Los Angeles State Historic Park site will be prepared by 2023 for the DTSC. It is unknown at this time if the additional soil removal action has been completed in the northeastern portion of the Los Angeles State Historic Park site. According to a *Proposed Soil Removal Locations* map dated 2014, included as an attachment to the Workplan Memorandum, it does not appear that soil removal action was required in the area of the proposed Chinatown/State Park Station, based on the established site-specific clean up goals. Based on this information, the soil impacts associated with the former use of the Los Angeles State Historic Park are not considered to represent a REC to the proposed Project. However, it should be noted that residual contamination may be encountered during the proposed Project, which can be managed under a SMP.

- Domenich Basso, Inc. (C4 to C5 and C7 to C9) at 1201 North Broadway is listed in EDR's Recovered Government Archive (RGA) LUST, FINDS, LUST, SWEEPS UST, HIST UST, CA FID UST, Cortese, HAZMAT, CERS, HAZNET, HWTS, and UST databases. This address is also listed as 1201 Broadway LLC (C6) in the HAZNET and HWTS databases. The 1201 North Broadway property was formerly occupied by an automotive dealership from 1924 until 2003, and is the proposed location of the Broadway Junction. Several of these database listings are related to the former use and storage of hazardous materials and wastes at the former automotive dealership, which are compliance-related databases, and therefore not considered to present a significant environmental concern. The UST databases and LAFD records indicate that former operations included the use of a 1,000-gallon gasoline UST, a 200-gallon waste oil UST, a three-stage clarifier, a paint spray booth and paint storage, an auto body shop, service area, former in-ground hydraulic lifts, and former 1,000-gallon gasoline AST and associated former gasoline pump island. As discussed in Section 5.2, the former USTs were installed in the 1940s, and removed in the 1990s; and at the time of removal, soil sampling was conducted, but no formal closure was issued by the LAFD (regulatory oversight agency). The former gasoline tank was located beneath the sidewalk

along North Broadway, and the former waste oil tank was inside the building in the service area of the former dealership. The LUST database reports that in 1991, a leak from the gasoline UST was discovered during a tank repair. Site assessment activities were conducted between 1999 and 2001 (discussed in Section 5.2), and the LUST case was closed by the LAFD in November 2001. As previously discussed in Section 5.2, the NFA status of the LUST case associated with the former gasoline UST at the former automotive dealership on the 1201 North Broadway property (proposed Broadway Junction location) is considered to present an HREC in connection with the proposed Project.

6.3.2 Summary of EDR Listings for Surrounding Properties

According to the environmental database report, numerous (over 100) sites were identified in their respective ASTM E1527-13 and/or EDR search distances from the proposed Project. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the proposed Project based on their distance (i.e., greater than 500 feet), nature of the listing (i.e., compliance, non-contamination-related), regulatory status (i.e., no violations found), and/or lack of listing in other databases indicating a release. Based on their proximity, the following sites are discussed, generally from south to north, in additional detail:

- El Pueblo Historic Park (J54, J59), at 845 North Alameda Street (APN 5408-011-908), is located adjacent to the northwest of the proposed Alameda Station, on the southwestern corner of Alameda Street and Cesar E. Chavez Avenue, and is listed in the HAZNET and HWTS databases. This address was also identified as Camacho's Inc. (J55-J56, J61) in the RCRA NonGen / NLR, FINDS, ECHO, and HWTS databases; as City of Los Angeles GSD (J57-J58) in the HAZNET and HWTS databases; and as Methodist Church (J60) in the HAZNET and HWTS databases. Based on the nature of the listings (i.e., compliance, non-contamination-related), lack of reported violations, and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Jeffries G. W. (J48), at 853 North Alameda Street (APN 5408-011-908), is located adjacent to the west of the proposed Alameda Station, on the southwestern corner of Alameda Street and Cesar E. Chavez Avenue, and is listed in the EDR Historical Auto database as 'gasoline and oil service stations' for the year 1942. Based on the historical nature of the listing and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Alameda & Macy (J64, no business name) is located at the intersection of Alameda Street and Cesar E. Chavez Boulevard, adjacent to the proposed Project alignment, and is listed in the UST database with a 'historical' status. No additional information is reported. Based on the historical nature of the listing and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Lisa's Casa de Crystal (K62), at 16 North Olvera Street, is located adjacent to the northwest of the proposed Alameda Station, on the southwestern corner of Alameda Street and Cesar E. Chavez Avenue, and is listed in the HAZMAT database. Based on the nature of the listing (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Chevron #9-8815 (J36, J38, J40, J42-J43, J47), at 901 North Alameda Street (APN 5408-013-026), is located adjacent to the west of the proposed Project alignment, nearest to the proposed Alameda Station, on the northwestern corner of Alameda Street and Cesar E. Chavez Avenue. This property is listed in the FINDS, LUST, Cortese, CERS, HAZNET, HWTS, RGA LUST, SWEEPS UST, HIST UST, and UST databases. This address is also identified as Hawk II Environmental Corp. Station 3 (J34-J35, J37, J39, J41, J44-J46) in the EDR Historical Auto, FINDS, RCRA NonGen / NLR, ECHO, CERS HAZ WASTE, CERS TANKS, HAZNET, HAZMAT, CERS, HWTS, and UST databases. This property has been occupied by a gasoline service station since at least 1984, as

discussed in Section 5. The UST databases report that this facility operates two 10,000-gallon gasoline USTs and one 10,000-gallon diesel UST; and one waste oil tank was removed in 1983. The LUST database reports that a gasoline release to soil was discovered in 1994 during product piping replacement, and the case status is reported as completed and closed as of September 7, 2011. Site assessment activities were completed in 1994, 2000, and 2011. According to a review of documents available on the online GeoTracker database, soil, soil gas, and groundwater concentrations reported in 2011 did not exceed regulatory action levels. Furthermore, the source of the gasoline leak had been removed and all of the USTs had either been upgraded or removed; the extent of soil and groundwater contamination had been adequately defined; and the residual soil and groundwater contamination was unlikely to cause significant human health and environmental risks. The site was granted closure under the UST Low Threat Closure Policy in 2011. Based on the regulatory status (i.e., case closure), this site is not considered to present a REC to the proposed Project.

- 788 North Main Street (O87, no business name) is located adjacent to the proposed Project alignment, near the intersection of Alameda Street and Bauchet/Main Street, and is listed in the UST database with a 'historical' status. No additional information is reported. Based on the nature of the listing (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- United States Postal Service (J49-J53, AJ207-AJ208) at 900 North Alameda Street is located adjacent to the east of the proposed Project alignment, nearest to the proposed Alameda Station, and is listed in the RGA LUST, RCRA NonGen / NLR, FNDS, ECHO, LUST, Cortese, and CERS databases. This address is also identified as U.S. Post Office (AJ196) in the SWEEPS UST and CA FID UST databases; as Verizon Business Lavzca (AJ197) in the AST database; as Coresite, LLC (AJ198-AJ199) in the AST and UST databases; as Terminal Annex (AJ200) in the HIST UST database; as Coresite Real Estate (AJ201-AJ202, AJ205) in the UST database; as Sprint Communications (AJ2013) in the CERS TANKS, HAZNET, NPDES, HAZMAT, CERS, and HWTS databases; as DMC Inc. (AJ204) in the HAZNET, HAZMAT, and HWTS databases; and as Amazon Data Services (AJ206) in the RCRA-Very Small Quantity Generator (VSQG) database. The LUST database reports that a release of diesel was discovered in 1994, and the case was closed as of November 12, 1999. Based on the regulatory status (i.e., case closed), this site is not considered to present a REC to the proposed Project.
- 934 North Alameda Street (J33I) is located adjacent to the east of the proposed Project alignment, nearest to the proposed Alameda Tower, on the northeastern corner of Alameda Street and Bauchet Street (APN 5409-015-022), and is listed in the UST database. No additional information is reported. Based on the nature of the listing (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- 'Electric Babbitt Metals aka Los Angeles Smeltin' (I78) at 739 North Main Street (APN 5408-013-016) is located adjacent to the west of the proposed Project alignment, nearest to the proposed Alameda Tower, on the southwestern corner of Alameda Street and Ord Street. This property is listed in the SEMS-ARCHIVE and LEAD SMELTERS databases. This address was also identified in the UST database (I79, no business name) and as Gibbs Realty (I77) in the SWEEPS UST and CA FID UST databases. This property was occupied Regent China Inn at the time of the site visits. The UST database status is reported as 'historical.'. The SEMS-ARCHIVE database indicates that the site was "referred to removal," and no further remedial action was planned. The site was archived in 2016. No further information was available in the online SEMS database. Based on the regulatory status (i.e., no further remedial action planned) and lack of listing in other databases indicating additional remedial action required (i.e., EnviroStor, GeoTracker), this site is not considered to present a REC to the proposed Project.

- LAFD – Fire Station #4 (O107-O111) at 800 North Main Street (APN 5409-015-025) is located northeast of the proposed Alameda Tower, across North Main Street, and is listed in the RCRA-LQG, FINDS, SWEEPS UST, CA FID UST, HIST UST, HAZMAT, LUST, Cortese, CERS, and UST databases. This address is also identified as Musacco Lonis (O106) in the EDR Historical Auto database. This property is currently a vacant lot. The UST databases report that this facility formerly operated one 1,000-gallon diesel UST. The UST status is reported as inactive. The LUST database reports that a release of diesel was discovered in 1999 during a tank repair, and the case status is reported as completed and closed as of February 18, 2009. No additional information was available on the online GeoTracker database. Based on the regulatory status (i.e., case closure) and media affected (i.e., soil only), this site is not considered to present a REC to the proposed Project.
- Magnus Company, Inc. (G104-G105), at 860 North Main Street, is located east of the proposed Project alignment, nearest to the proposed Alameda Tower, and is listed in the EnviroStor and SEMS-ARCHIVE databases. The SEMS-ARCHIVE database indicates that Discovery was in 1981, a Preliminary Assessment in 1984, and then the site was Archived in 1984. The EnviroStor database indicates that no further action is required as of 1984. Based on the regulatory status (i.e., no further action), this site is not considered to present a REC to the proposed Project.
- Starlight Nail Supply Inc. (129-I30), at 1028 North Alameda Street (APN 5409-008-025), is adjacent to the northeast of the proposed Project alignment, nearest to the proposed Alameda Tower, on the northeastern corner of Alameda Street and Main Street, and is listed in the CA FID UST and FINDS databases. These database listings report an inactive status. Based on the nature of the listings (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- The California Endowment (I123-I124), at 1000 North Alameda Street (APN 5409-015-022), is located adjacent to the east of the proposed Project alignment, nearest to the proposed Alameda Tower, on the northeastern corner of Alameda Street and Bauchet Street, and is listed in the LUST, Cortese, CERS, HAZMAT, CIWQS, and HWTS databases. The LUST database indicates that a release of diesel to soil was discovered in 2004 during tank removal activities, and the case status is reported as closed as of September 30, 2008. Remedial action included the excavation of contaminated soils. Based on the regulatory status (i.e., case closure), media affected (i.e., soil only), and removal of the source (former UST), this site is not considered to present a REC to the proposed Project.
- Trillium USA Company LLC #90012-1 (H26-H28), at 1017 North Alameda Street (APN 5408-028-908), is located to the west of the proposed Project alignment, nearest to the proposed Alameda Tower, is associated with the County of LA property, discussed above, and is listed in the FINDS, ECHO, RCRA NonGen / NLR, and HWTS databases. The address 720 North Spring Street is also associated with APN 5408-028-908, which is identified as County of Los Angeles – Internal SE (131) in the HAZMAT database. Based on the nature of the listings (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Centerra Integrated Fleet Services (H89-H90, H94), at 1055 North Alameda Street (APN 5408-028-909), is located adjacent to the northwest of the proposed Alameda Tower and to the southeast of the proposed Alpine Tower, on the southwestern corner of Alameda Street and Alpine Street. This property is listed in the UST, AST, CERS HAZ WASTE, CERS TANKS, HAZMAT, CERS, and RCRA NonGen / NLR databases. This address was also identified as LA County – ISD Alameda St. Garage (H88) in the UST database; as Alameda Street Garage (H91) in the CERS HAZ WASTE, SWEEPS UST, CA FID UST, CERSTANKS, HAZNET, Los Angeles County HMS (County Industrial Waste and Underground Storage Tank Sites), HAZMAT, CERS, and HWTS databases; as LA County Parking Services in the UST database; as Clean Energy Fuels (H95-H96) in the RCRA NonGen/NLR database; as MPR Fleet Services Inc. (H97) in the RCRA-SQG, FINDS, and ECHO databases; as Johnson Controls – Alameda Garage (H98) in the CERS HAZ WASTE, HAZNET,

HAZMAT, CERS, and HWTS databases; and as Alameda Garage (H99) in the RCRA NonGen/NLR database. The address 720 North Spring Street also appears to be associated with this APN, which was identified as County of Los Angeles – Internal SE (131) in the HAZMAT database. The address 1037 North Alameda Street is also associated with APN 5408-028-909, which was identified in the UST database (H22, no business name provided). The address 1035 North Alameda Street is also associated with APN 5408-028-909, which was identified as LA Co. Parking Garage (H23-H24) in the FINDS, LUST, Cortese, HIST CORTESE, and CERS databases; and as LA County – Facilities Mgmt. Dept (H25) in the HAZMAT database. The UST database listings are associated with a 10,000-gallon gasoline tank, a 7,500-gallon gasoline tank, a 2,000-gallon diesel tank, and a 1,000-gallon waste oil tank that were operated at this facility. The LUST database indicates that a release of gasoline was discovered in 1995 during tank closure activities, and the case status is reported as closed as of January 22, 1998. No additional information was available on the GeoTracker database. Based on the type of listings (i.e., compliance-related), regulatory status (i.e., case closure), and/or removal of the source, this site is not considered to present a REC to the proposed Project.

- 808 Spring St. Real Estate LLC (N86), at 808 North Spring Street (APN 5408-029-005), is located adjacent to the west of the proposed Project alignment, nearest to the proposed Alpine Tower, on the northwestern corner of Alameda Street and Alpine Street. This property is listed in the HAZNET, HAZMAT, and HWTS databases. Based on the nature of the listings (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- 860 N Spring Street (F84, no business name) is located adjacent to the proposed Project alignment, between the proposed Alpine Tower and Chinatown/State Park Station, near the intersection of Spring Street and Bruno Street, and is listed in the UST database with a ‘historical’ status. Based on the nature of the listing (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- My-Chau Jewelry (F118), at 861 North Spring Street (APN 5408-031-015), is located adjacent to the west of the proposed Project alignment, between the proposed Alpine Tower and Chinatown/State Park Station, across from the Metro L Line (Gold) structure on the southwestern corner of Spring Street and College Street, and is listed in the HAZMAT database. The address 843 North Spring Street (F122), which was identified in the UST database, also appears to be associated with this APN. The UST database lists the status as ‘historical.’. No additional information was provided in the UST database. This property is currently occupied by The Shop, a multi-tenant commercial/retail property. Based on the nature of the listings (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Fueling Station Former (F14-F16) at 1135 North Alameda Street (APN 5408-029-001) is located adjacent to the west of the proposed Project alignment, nearest to the proposed Alpine Tower, on the western side of Alameda Street. This property is listed in the FINDS, HAZMAT, LUST, Cortese, and CERS databases. The address 1137 North Alameda Street (APN 5408-029-001) is also associated with this property, which was identified as Carrasco Brothers (F81-F83) in the SWEEPS UST, HIST UST, CA FID UST, and EDR Historical Auto databases. A gasoline service station operated at this property from at least the early 1960s through 2005. This property was occupied by a parking lot with a vacant small one-story commercial building at the time of the site visits. The LUST database indicates that a gasoline release to soil only was discovered in 1988 during tank closure activities, and the case status is reported as completed and closed as of February 16, 2016. According to case closure documentation reviewed on the online GeoTracker database, the extent of soil contamination has been defined and limited to the property, and based on soil analytical results, site remediation was not necessary. The site was granted closure under the Low Threat UST Closure Policy. Based on the regulatory status (i.e., case closure), media affected (i.e.,

soil only), and removal of the source (former USTs), this site is not considered to present a REC to the proposed Project.

- Mobil #11-H41 (Former)/Mobil Oil Corp. (AF217, AF220, AF222) at 774 North Broadway is located approximately 400 feet west-northwest of the proposed Project alignment, nearest to the proposed Alpine Tower location, on the southwestern corner of Alpine Street and New High Street, and is listed in the LUST, Cortese, CERS, CPS-SLIC, SWEEPS UST, and CA FID UST databases. This address is also identified in the UST (AF216, AF218) database; as Mario Mato (AF219) in the CPS-SLIC, HIST UST, and CERS databases; and as Twins Service (AF221) in the EDR Historical Auto. The CPS-SLIC status is reported as no further action required. The HIST UST database indicates that property historically operated four USTs. The UST database indicates the status as 'historical'. This LUST status is reported as completed-case closed as of September 26, 1996. No additional information was available on the online GeoTracker database. Based on the regulatory status (i.e., case closed) and the hydrogeological location relative to the proposed Project alignment (i.e., cross-gradient), this site is not considered to present a REC to the proposed Project.
- College Station (E13) at 900 North Spring Street is located adjacent to the east of the proposed Project alignment, between the proposed Alpine Tower and Chinatown/State Park Station, and is listed in the NPDES, CIWQS, and CERS databases. These database listings are related to industrial storm water discharges during construction activities. Based on the nature of the listings (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- 901 North Spring Street (F117) (APN 5414-013-901) is located adjacent to the west of the proposed Project alignment, between the proposed Alpine Tower and Chinatown/State Park Station, across from the Metro L Line (Gold) Chinatown Station, and is listed in the UST database. The address 900 North Broadway also appears to be associated with APN 5414-013-901, which was identified as present-day Blossom Plaza Mixed Use Community (159) in the EnviroStor, VCP, Enforcement (ENF), NPDES, and CIWQS databases. The EnviroStor database reports that this property is part of the VCP, and the status is reported as certified as of April 14, 2015. Review of documents available on the online EnviroStor database indicates that during redevelopment a subsurface investigation was conducted to assess impacts from VOCs, lead, and TPH. Based on the results, the DTSC concluded that soil and soil gas concentrations did not pose a risk to the future development and additional investigation was not required. Based on the regulatory status (i.e., certified, case closure, no further action required), this site is not considered to present a REC to the proposed Project.
- International Bank Property (T134-T135) at 943 North Main Street (APN 5409-008-006) is identified to the east of the proposed Project alignment, nearest to the Alpine Tower; however, this parcel appears to be associated with the MST School Bus Driver Training property at 130 West College Street (APN 5409-008-015), which occupies the entire block and is located adjacent to the east of the proposed Project alignment. International Bank Property is listed in the CPS-SLIC and CERS databases. The CPS-SLIC case status is reported as closed as of September 26, 1997. A letter dated September 25, 1997, reviewed on the online GeoTracker database, states that during a Phase II investigation, low levels of trichloroethylene (TCE) and tetrachloroethylene (PCE) were detected in soil gas, and low levels of ethylbenzene and xylenes were detected in soil; based on the results, no further action was required. Based on the regulatory status (i.e., case closure, no further action required), this site is not considered to present a REC to the proposed Project.
- D & S Ingredient Transfer Co. (E69-E70) (APN 5409-008-015) is located adjacent to the east of the proposed Project alignment, between the Alpine Tower and Chinatown/State Park Station, and is listed in the HIST UST, SWEEPS UST, and CA FID UST databases. This address is also identified as 130 West College Street (E71) in the UST database. The UST databases indicate that one 8,825-gallon diesel tank installed in 1978 was formerly operated at this property. This tank status is reported as inactive. No additional information was provided in the UST databases. This property is currently occupied by MST School Bus Driver Training facility. Based on the nature of the listings

(i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.

- Blue Line Parcel PA-108 (M72-M73) at 924 North Spring Street (APN 5409-007-003) is located adjacent to the east of the proposed Project alignment, nearest to the Chinatown/State Park Station, on the northeastern corner of Spring Street and College Street. This property is listed in the CPS-SLIC and CERS databases. This property is currently a vacant lot that has been approved by the City for redevelopment for residential uses. This address is also identified as Chinatown Station (M74) in the US Brownfields and FINDS databases. The address 129 West College Street (E80, no business name) also appears to be associated with APN 5409-007-003, which is identified in the UST database. The CPS-SLIC facility status is reported as completed-case closed as of February 20, 2003. Excavation of contaminated soils was completed in 2002. The CPS-SLIC database indicates that this property was formerly owned by UPRR Company, and was used as a rail freight yard between 1905 and 1970. It was also used as a wood and coal yard, an oil warehouse, dwellings, and for small businesses. The property has been vacant since 1970, and the former buildings were demolished in the late 1980s. A gasoline tank was removed in April 1987, with no evidence of leakage. Reports from 1989 indicate that the site was also used for the storage of tanks and shipping containers. Groundwater beneath the property is reported at depths of about 30 feet bgs, with a groundwater flow direction to the south-southwest. Groundwater in the southwestern portion of the property has been impacted by heavy-end petroleum hydrocarbons (diesel-range and total recoverable petroleum hydrocarbons), metals/heavy metals, and VOCs. Based on regional groundwater flow and documented historic service station operations at neighboring off-site properties, it was concluded that the groundwater contamination appeared to be from off-site sources. No additional information was available on the online GeoTracker database. Based on the regulatory status (i.e., case closed), lack of an ongoing source, and lack of construction activities proposed near the southwestern corner of this property (where impacts were identified), this site is not considered to present a REC to the proposed Project.
- LA Signal Shop (P100, R127), at 1251 North Spring Street (APN 5414-016-002), is located adjacent to the west of the proposed Project alignment, across the Metro L Line (Gold) tracks, nearest to the Chinatown/State Park Station, and is listed in the HIST UST, SWEEPS UST, CA FID UST, CHMIRS, HAZNET, HAZMAT, CIWQS, and HWTS database. This address is also identified as Link US (R125) in the RCRA-LQG, FINDS, ECHO, and HAZNET databases; and as LACMTA (R126) in the RCRA NonGen / NLR database. The UST databases report that this facility formerly operated one 8,000-gallon gasoline UST. The UST status is reported as inactive. The CHMIRS database reports that a spill of 40 gallons of fuel oil from a fuel truck occurred in 2001. Based on the quantity released and the lack of listing in other databases indicating other releases to soil or groundwater or required remedial action, this site is not considered to present a REC to the proposed Project.
- Capitol Milling Co. (Q119-Q120), at 1231 North Spring Street (APN 5414-014-001), is located adjacent to the west of the proposed Project alignment, nearest to the proposed Chinatown/State Park Station, and is listed in the HAZMAT, CIWQS SWEEPS UST, CA FID UST, and California Hazardous Material Incident Reporting System (CHMIRS) databases. The UST databases indicate the status as inactive. No additional information was provided in the UST databases. The CHMIRS database indicates that a bus line ruptured in 2015, causing a release of antifreeze into a storm drain, which was cleaned up by the responsibly party. Based on the nature of the listings (i.e., compliance, non-contamination-related) and lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.
- Cathedral High School (A1 and A75-A76), at 1253 Bishops Road (APN 5414-019-007), is located adjacent to the west of the proposed Project alignment and the proposed Broadway Junction location, and is listed in the FINDS and RCRA NonGen / NLR database. Cathedral High School is also identified at 1111 North Broadway (D10 to D11) in the HAZNET and HWTS databases. Based on the nature of the listings (i.e., compliance, non-contamination-related), lack of violations, and

lack of listing in other databases indicating a release to soil or groundwater, this site is not considered to present a REC to the proposed Project.

- Union Pacific Railroad Company (AC169, AC172), at 1322 North Broadway, is located approximately 300 feet northeast of the proposed Broadway Junction location, and is listed in the HIST CORTESE, LUST, SWEEPS UST, HIST UST, CA FID UST, Cortese, and CERS databases. This address was also identified as Ginsburg Naftuhn (AC169) in the EDR Historical Auto database; and as Wu Texaco (Z144) in the HIST UST database. The LUST database reports that a release of gasoline was discovered in 1989. The LUST status is reported as completed-case closed as of December 22, 1997. No additional information was available on the online GeoTracker database. Based on the regulatory status (i.e., case closed), this site is not considered to present a REC to the proposed Project.

6.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 Vapor Encroachment Screening (VES) as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-15. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

6.4.1 Proposed Project Alignment

No on-site sources of vapor encroachment (e.g., UST, contaminated soil, groundwater plume) were identified during this assessment, except for residual concentrations of TPH that may still exist on the 1201 North Broadway property (proposed Broadway Junction location) in the areas of the former in-ground hydraulic lifts and the gasoline UST. Based on this information, a VEC due to an on-site source exists; however, based on the depth (15 feet or greater) to soil impacts, this VEC is not considered a REC.

6.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report, with particular focus on the following two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the Project alignment; and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the Project alignment.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that 11 CVOC/SVOC and 12 petroleum hydrocarbon impacted sites are located within the above-described radii of the proposed Project. Based on the presence of impacted sites in the immediate vicinity of the proposed Project, a VEC to the proposed Project due to an off-site source may exist; however, the potential presence of a VEC is not considered a REC due to the lack of enclosed ground-level structures in these areas, in AECOM's opinion.

6.5 Agency File Review

6.5.1 City and County

The City of Los Angeles maintains several online databases, including the Bureau of Engineering, Department of Public Works, NavigateLA database, and the Department of City Planning, Zoning

Information and Map Access System (ZIMAS) database, which were searched for information on the area of the proposed Project. In addition, AECOM examined the Los Angeles County Office of the Assessor online PAIS for information on the area of the proposed Project. Information obtained from these online databases has been incorporated throughout this report where appropriate.

The LAFD maintains inventory lists of USTs (active and inactive), aboveground petroleum storage tanks, and hazardous materials facilities in the City of Los Angeles. These inventory lists were searched to determine if the LAFD has Certified Unified Program Agency (CUPA) records pertaining to the Project alignment. Available USTs/Hazardous Materials records were found for the 1201 North Broadway property (proposed Broadway Junction location). The records provided contained pages from soil investigations that were conducted at the 1201 North Broadway property to assess potential impacts from the historical features identified in connection with the former dealership, including UST removal/closure documentation for an on-site former 200-gallon waste oil UST and on-site former 1,000-gallon gasoline UST (as discussed in Section 5.2).

AECOM also contacted the Los Angeles County Fire Department, Health Hazardous Materials Division (HHMD) for records pertaining to hazardous materials and/or storage tanks for 1201 North Broadway. The HHMD responded on September 16, 2020, and reported that no records were found for the 1201 North Broadway address.

6.5.2 State

AECOM searched DTSC's online EnviroStor database for California Cleanup Sites involving the DTSC. The EnviroStor database consists of federal National Priorities List (NPL) sites, State response sites, voluntary cleanup sites, and school cleanup sites. Los Angeles State Historic Park was identified in the online EnviroStor database as Cornfield Site in the Voluntary Cleanup Program (VCP), which is discussed in Section 6.3.1. No other listings were identified associated with the proposed Project in the online EnviroStor database.

AECOM searched the California EPA's SWRCB online GeoTracker database, which consists of LUST Cleanup Sites, (non-petroleum) Cleanup Program Sites (CPS), Military Cleanup Sites, and Permitted UST Sites located throughout California. As discussed in Section 6.3 above, Domenich Basso (1201 North Broadway) and Los Angeles State Historic Park are identified in the online GeoTracker database. Domenich Basso is listed with a completed-closed LUST case, and received regulatory case closure from the LAFD in 2001. Los Angeles State Historic Park is listed with an open-verification monitoring case status as of 2010, which is discussed further in Section 6.3.1. No other listings were identified associated with the proposed Project in the online GeoTracker database. One site was identified within 500 feet of the proposed Project in the online GeoTracker databases that was not listed in the EDR database report. This site is listed as "Los Angeles County Department of Public Works" at 1060 North Vignes Street, and is approximately 350 feet to the east of the proposed Project and the Alpine Tower. This site is identified as an open LUST case with an "Inactive" status as of March 7, 2022. Based on information reviewed in the online GeoTracker database, during redevelopment of this site in 2020, two USTs were encountered and subsequently removed. Post-removal soil sample results exceeded regulatory action levels, and then in March 2022, the case was referred by the LAFD to the RWQCB. To facilitate their review and allow the RWQCB to identify further-required actions, the RWQCB required the responsible party (Los Angeles County Department of Public Works) to provide additional information regarding the site. Based on the distance (not adjacent), removal of the source (UST removals), and ongoing redevelopment, this site is not considered to present a REC to the proposed Project.

AECOM searched the online Cal/EPA Regulated Site Portal database, which combines information from the CERS, EnviroStor, GeoTracker, CIWQS, and federal Toxics Release Inventory (TRI) database. Domenich Basso (1201 North Broadway) and UPRR – Cornfield Yard (1245 North Spring Street) were identified in the online Cal/EPA Regulated Site Portal database, which are consistent with the database reports listings discussed in Sections 6.3.1. No other listings were identified associated with the proposed Project in the online Cal/EPA Regulated Site Portal database.

The California Department of Conservation online Geologic Energy Management Division's (CalGEM, formerly Division of Oil, Gas, and Geothermal Resources [DOGGR]) Well Finder (WellSTAR) database was reviewed for information regarding oil/gas wells located in and near the proposed Project. According to the WellSTAR website, a portion of the proposed Project traverses the Los Angeles City Oil Field. No active or abandoned oil/gas wells were depicted in the proposed Project. However, portions of the proposed Project are located in areas that have been designated by the City of Los Angeles as a Methane Zone and/or Methane Buffer Zone due to their proximity to the Los Angeles City Oil Field. These Methane Zones, Methane Buffer Zones, and the Los Angeles City Oil Field are discussed further in the *Geotechnical Document in Support of the Environmental Impact Report* prepared for the proposed Project.

6.5.3 Federal

AECOM performed a review of online records available on the National Pipeline Mapping System (NPMS) public map viewer maintained by the U.S. DOT's Pipeline and Hazardous Materials Safety Administration (PHMSA), for gas transmission or hazardous liquid pipelines on or adjacent to the proposed Project. An active hazardous liquid [petroleum] pipeline (crude oil pipeline operated by Plains Pipeline L.P.) was identified beneath Alameda Street and Spring Street in the location of the proposed Project, and an active natural gas transmission pipeline (operated by Southern California Gas Co.) was identified transecting the proposed Project along Alpine Street. No other hazardous liquid or natural gas pipelines were identified in the location of the proposed Project alignment that are under PHMSA's jurisdiction.

AECOM searched the U.S. EPA's Envirofacts and SEMS online databases. The Envirofacts database retrieves information obtained from 17 national systems, including the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), Superfund program (NPL sites), hazardous waste sites, and potential hazardous waste sites. The SEMS database replaced the CERCLIS, which has since been retired. SEMS includes the same data fields and content as CERCLIS. LAUS (proposed location for construction support space and vertical circulation elements for Alameda Station), El Pueblo (proposed location for construction support space and vertical circulation elements for Alameda Station), Alpine and Alameda (proposed Alpine Tower location), and Los Angeles State Historic Park (proposed Chinatown/State Park Station location) were identified in the Envirofacts database, which is consistent with the database listings discussed in Section 6.3.1. No other listings were identified associated with the proposed Project alignment in the Envirofacts database. No listings were identified associated with the proposed Project alignment in the SEMS database.

7. Findings and Opinions

AECOM performed a Phase I ESA of the proposed Project in conformance with the scope and limitations of ASTM E1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312, and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA of the proposed Project.

7.1 Recognized Environmental Conditions

The following RECs were identified during this assessment:

- The historical review revealed that railroad tracks were present along the center of Alameda Street in the area of the proposed Project alignment from at least 1888 through 1970, based on the Sanborn maps. In addition, several spur tracks were apparent in area of the planned LAUS Forecourt in the 1923 and 1928 aerial photographs, which is one of proposed locations for the vertical circulation elements and queuing areas to the Alameda Station. Portions of the tracks may remain beneath pavement or may have been removed from these areas. The potential presence of hydrocarbons, metals, and persistent pesticides in soil along or adjacent to the railroad track alignment represents a REC to the proposed Project.
- In 2003, Ninyo & Moore collected soil samples at the 1201 North Broadway property (proposed Broadway Junction location) to investigate potential subsurface impacts from a former automotive dealership. TPH was detected in the area of the former hydraulic lifts at concentrations ranging from 10 to 27,000 mg/kg at depths of 15 to 20 feet bgs, and TPH-g and BTEX were detected in the area of the former gasoline UST at concentrations ranging from at 37 to 150 mg/kg at 18 to 20 feet bgs, and 22 to 2,400 µg/kg at 18 to 20 feet bgs, respectively. Due to the localized and/or limited nature of the concentrations, in 2003, at the time of their investigation, Ninyo & Moore recommended no further investigation or remediation. AECOM concurs with Ninyo & Moore's conclusion; however, it should be noted that as part of the proposed Project for the proposed Broadway Junction, although the maximum depth of excavation is only 7 feet bgs, the maximum depth of utilities is 10 feet bgs, and the maximum depth of drilled piles at the Broadway Junction location is to 120 feet below pile depth. Therefore, residual petroleum hydrocarbons may be encountered in the area of the former hydraulic lifts, as well as the gasoline UST, with the demolition of the building at the 1201 North Broadway property as part of the construction of the proposed Broadway Junction. Therefore, the TPH impacts to soil left in-place at the 1201 North Broadway property is considered to present a REC to the proposed Project.
- Annual groundwater monitoring has been ongoing at the Los Angeles State Historic Park (proposed Chinatown/State Park Station location) since 2001, at the request of the RWQCB. The 2021 Annual Report was the most recent monitoring report available on GeoTracker (dated January 2022); and at that time, depth to groundwater at the park site ranged from 27.95 feet bgs to 60.07 feet bgs. The annual report stated that concentrations of fuel-related petroleum hydrocarbons and BTEX had generally decreased compared to the previous annual groundwater monitoring events; however, concentrations of benzene were detected above the California MCL in well BMW-4, which is located greater than ¼ mile upgradient of the proposed location for the Chinatown/State Park Station. In addition, benzene was detected above the MCL in well BMW-6, which is located approximately 450 feet downgradient from well BMW-4; benzene had not been detected in this well during the previous annual monitoring events since 2016. The 2021 annual report did not specifically discuss that the detected concentration of benzene in well BMW-6 was above the MCL, but stated that BTEX concentrations in groundwater had shown a generally decreasing trend and the area of remaining dissolved phase gasoline-range impacts to groundwater were stable given the long-term monitoring concentration trends. Based on the analytical results, it is AECOM's opinion that the newly detected benzene concentration in well BMW-6 may indicate that the plume may be migrating downgradient

towards the proposed Project. Based on maps included in the 2021 Annual Report, no groundwater monitoring wells appear to be located within the proposed construction area for the proposed Chinatown/State Park Station and the groundwater monitoring wells in close proximity to the proposed Chinatown/State Park Station are MW-2 and MW-19, which were not sampled during the 2021 annual monitoring event. Based on this information and the lack of current groundwater data in the area of the proposed Chinatown/State Park Station, the groundwater impacts associated with the former use of the Los Angeles State Historic Park are considered to represent a REC to the proposed Project.

7.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the proposed Project.

7.3 Historical Recognized Environmental Conditions

The following HREC was identified during this assessment:

- The former automotive dealership on the 1201 North Broadway property (proposed Broadway Junction location) was identified as Domenich Basso in the environmental database report search and the online GeoTracker database, and is associated with a completed-closed LUST case. The former dealership received regulatory case closure in 2001 from the LAFD for gasoline impacts to soils from an UST. An NFA letter dated November 28, 2001 was provided in records received from the LAFD. The NFA status of the LUST case is considered to present an HREC in connection with the proposed Project.

7.4 Vapor Encroachment Conditions

The following VECs were identified during this assessment:

- Residual concentrations of TPH may still exist in soils at the 1201 North Broadway property (proposed Broadway Junction location) in the areas of the former in-ground hydraulic lifts and gasoline UST. Based on this information, a VEC due to an on-site source exists; however, based on the depth (15 feet or greater) to soil impacts, this VEC is not considered to present a REC to the proposed Project.

- A review of the site-specific environmental database indicates that CVOC/SVOC and petroleum hydrocarbon impacted sites are located in the immediate vicinity of the proposed Project. Based on the presence of impacted sites in the immediate vicinity of the proposed Project, a VEC to the proposed Project due to an off-site source may exist; however, the potential presence of a VEC is not considered a REC due to the lack of enclosed ground-level structures in these areas of the proposed Project.

7.5 De Minimis Conditions

The following DMC was identified during this assessment:

- An active crude oil pipeline operated by Plains Pipeline L.P. was identified beneath Alameda Street along the proposed Project alignment.

8. Conclusions and Recommendations

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 of the proposed Los Angeles Aerial Rapid Transit Project (proposed Project) that would connect LAUS to the Dodger Stadium property via an aerial gondola system in Los Angeles, Los Angeles County, California. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed no evidence of CRECs in connection with the proposed Project. The following RECs were identified in connection with the proposed Project:

- The historical review revealed that railroad tracks were present along the center of Alameda Street in the area of the proposed Project alignment from at least 1888 through 1970, based on the Sanborn maps. In addition, several spur tracks were apparent in area of the planned LAUS Forecourt in the 1923 and 1928 aerial photographs, which is one of proposed locations for the vertical circulation elements and queuing areas to the Alameda Station. Portions of the tracks may remain beneath pavement, or may have been removed from these areas. The potential presence of hydrocarbons, metals, and persistent pesticides in soil along or adjacent to the railroad track alignment represents a REC to the proposed Project.
- In 2003, Ninyo & Moore collected soil samples at the 1201 North Broadway property (proposed Broadway Junction location) to investigate potential subsurface impacts from a former automotive dealership. TPH were detected in the area of the former hydraulic lifts at concentrations ranging from 10 to 27,000 mg/kg at depths of 15 to 20 feet bgs, and TPH-g and BTEX were detected in the area of the former gasoline UST at concentrations ranging from at 37 to 150 mg/kg at 18 to 20 feet bgs, and 22 to 2,400 µg/kg at 18 to 20 feet bgs, respectively. Due to the localized and/or limited nature of the concentrations, in 2003, at the time of their investigation, Ninyo & Moore recommended no further investigation or remediation. AECOM concurs with Ninyo & Moore's conclusion; however, it should be noted that as part of the proposed Project for the proposed Broadway Junction, although the maximum depth of excavation is only 7 feet bgs, the maximum depth of drilled piles at the Broadway Junction location is to 120 feet below pile depth. Therefore, residual petroleum hydrocarbons may be encountered in the area of the former hydraulic lifts, as well as the gasoline UST, with the demolition of the building at the 1201 North Broadway property as part of the construction of the proposed Broadway Junction. Therefore, the TPH impacts to soil left in-place at the 1201 North Broadway property is considered to present a REC to the proposed Project.
- Annual groundwater monitoring has been ongoing at the Los Angeles State Historic Park (proposed Chinatown/State Park Station location) since 2001, at the request of the RWQCB. The 2021 Annual Report was the most recent monitoring report available on GeoTracker (dated January 2022); and at that time, depth to groundwater at the park site ranged from 27.95 feet bgs to 60.07 feet bgs. The annual report stated that concentrations of fuel-related petroleum hydrocarbons and BTEX had generally decreased compared to the previous annual groundwater monitoring events; however, concentrations of benzene were detected above the California MCL in well BMW-4, which is located greater than ¼ mile upgradient of the proposed location for the Chinatown/State Park Station. In addition, benzene was detected above the MCL in well BMW-6, which is located approximately 450 feet downgradient from well BMW-4; benzene had not been detected in this well during the previous annual monitoring events since 2016. The 2021 annual report did not specifically discuss that the detected concentration of benzene in well BMW-6 was above the MCL, but stated that BTEX concentrations in groundwater had shown a generally decreasing trend and the area of remaining dissolved phase gasoline-range impacts to groundwater were stable given the long-term monitoring concentration trends. Based on the analytical results, it is AECOM's opinion that the newly detected benzene concentration in well BMW-6 may indicate that the plume may be migrating downgradient towards the proposed Project. Based on maps included in the 2021 Annual Report, no groundwater monitoring wells appear to be located within the proposed construction area for the proposed Chinatown/State Park Station and the groundwater monitoring wells in close proximity to the

proposed Chinatown/State Park Station are MW-2 and MW-19, which were not sampled during the 2021 annual monitoring event. Based on this information and the lack of current groundwater data in the area of the proposed Chinatown/State Park Station, the groundwater impacts associated with the former use of the Los Angeles State Historic Park are considered to represent a REC to the proposed Project.

Based on the results of this assessment, AECOM recommends the following:

- In order to be protective of human health and the environment, and if excavated soils are planned for off-site disposal, a Soil and Groundwater Management Plan should be prepared for the proposed Project alignment due to the historical use of the area of proposed Project, the historical presence of railroad tracks along Alameda Street, and the proposed depths of excavation/drilled piles, prior to any re-grading, decommissioning, or construction activities. The Soil and Groundwater Management Plan should include methods and procedures for sampling and analyzing soils and/or groundwater to classify them as either hazardous or non-hazardous, and if identified as hazardous, shall include additional methods and procedures for the proper storage, handling, transport, and removal of impacted soils and/or groundwater for off-site disposal and/or recycle, and notification to the local regulatory agency, as required. Methods and procedures in the Soil and Groundwater Management Plan should be protective of workers and the environment.

9. Environmental Professional Statement

Ms. Jessica Himebauch was the Environmental Professional (EP) for this project. Ms. Himebauch's EP statement is below, and her resume is provided in Appendix H.

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 CFR and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the proposed Project. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature: _____ Date: _____

Subject: Asbestos and Lead-Based Paint Survey
1201-1221 North Broadway
and 442-448 E. Savoy Street
Los Angeles, California

Dear Mr. Fain:

In accordance with your authorization to proceed, Ninyo & Moore has performed an Asbestos and Lead-Based Paint Survey at 1201-1221 North Broadway and 442-448 East Savoy Street in Los Angeles, California. The attached report presents our methodology, findings, conclusions, and recommendations regarding our survey.

We appreciate the opportunity to be of service to you on this important project. Should you have any questions regarding this report, please contact me at your convenience.

Sincerely,
NINYO & MOORE

Dana E. Williams
Certified Asbestos Consultant No. 93-1168

1. INTRODUCTION

In accordance with your request and authorization to proceed, Ninyo & Moore has performed an asbestos survey and has coordinated the performance of a lead-based paint (LBP) survey at 1201-1221 North Broadway and 442-448 East Savoy Street in Los Angeles, California (Figure 1). This report has been prepared in accordance with generally accepted environmental science and engineering practices. This report is based upon conditions at the subject building at the time of the sampling activities and provides documentation of our findings and recommendations.

2. PURPOSE AND SCOPE OF SERVICES

The purpose of the survey was to evaluate the subject site for the presence of asbestos-containing materials (ACMs) and LBP. The objective of the survey was to gain information regarding site conditions to assist in proposed renovation activities at the site. Ninyo & Moore performed the following services:

- Performance of a visual reconnaissance of the readily accessible areas of the site to evaluate the possible presence of ACMs.
- Collection of 53 building material samples and submittal of these samples to an independent laboratory for analysis of asbestos content.
- Collection of 276 x-ray fluorescence (XRF) readings of potential LBP.
- Preparation of a site plan showing bulk sample locations.
- Preparation of this report summarizing our field activities, laboratory test results, conclusions, and recommendations.

3. SITE DESCRIPTION

The subject site consists of an automotive dealership totaling approximately 26,000 square feet. The building was a single-story, masonry and concrete structure, on a concrete foundation. Floors were covered with carpet, floor tile, or were bare concrete. Interior walls and ceilings were wood framed and covered with wood, plaster, or drywall. Drop ceiling panels were in office areas and the showroom ceiling was finished with acoustical plaster. Heating, ventilation, and air conditioning (HVAC) ducts were noted to be insulated with non-suspect fiberglass. The wood-

framed roof areas were covered with several layers composite shingles and built-up roofing material. The roof penetrations were coated with plastic roof cement.

4. PHYSICAL LIMITATIONS

Since non-destructive sampling techniques were used, there is a possibility that additional ACMs and LBPs may be encountered in inaccessible areas (e.g., interstitial wall spaces) during building renovation activities.

5. SAMPLE COLLECTION

On June 19, 2003, Ninyo & Moore personnel conducted an asbestos survey, and Barr & Clark was contracted to conduct a LBP survey of the site. The surveys followed United States Environmental Protection Agency (EPA) guidelines, within the limitations of the scope of this survey. The asbestos survey was performed by a California-Certified Asbestos Consultant and consisted of collecting building materials from the subject structures. The LBP survey was conducted by a California Certified Lead Paint Inspector/Assessor.

5.1. Asbestos Survey

A preliminary visual assessment and bulk-sampling survey of suspect ACMs was performed. Representative samples of the suspect ACMs were collected after identification of homogeneous sampling areas (areas in which the materials are uniform in color, texture, construction or application date, and general appearance). Each homogeneous area was observed for material type, location, condition, and friability. Representative samples were collected from each area except areas that were inaccessible, or areas of assumed ACM, within the limitations of the survey. Samples were collected using EPA-recommended sampling procedures. Building materials which were sampled and analyzed for the presence of asbestos are presented in Table 1. The locations of bulk asbestos samples are shown on Figure 2.

5.2. Paint Survey

To assess the painted surfaces portable XRF spectrum analyzer technologies were utilized. The survey was conducted in general accordance with accepted environmental science and engineering practices.

A total of 276 XRF readings were analyzed. The XRF results are in the LBP inspection report in Appendix B.

6. LABORATORY ANALYSES AND RESULTS

6.1. Asbestos Analysis

Fifty-three samples of suspect ACMs were collected and transferred to LA Testing. LA Testing is an accredited laboratory in the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos fiber analysis. The samples were analyzed using Polarized Light Microscopy with dispersion staining (PLM/Ds), for the presence and quantification of asbestos fibers, in general accordance with EPA Method 600/M4-82-020. The lower limit of reliable detection for asbestos using the PLM method is approximately 1 percent by volume. California regulations now define ACMs as those materials having an asbestos content of greater than one tenth of 1 percent (0.1%). Materials in which no asbestos was detected are defined in the laboratory report as "None detected." Materials containing asbestos, but in amounts less than 1 percent but greater than 0.1 percent, are defined as containing "trace" amounts. Building materials with an asbestos concentration greater than 0.1 percent are listed in Section 7 of this report. Suspect materials sampled and the analytical results are summarized in Table 1. A copy of the laboratory analytical report and chain-of-custody record is presented in Appendix A.

6.2. Paint Analysis

Currently, the State of California and the EPA stipulate what concentrations of lead in non-volatile components of surface coatings or materials determine a material to be a LBP. The California Department of Health Services (DHS) stipulates that materials containing an

amount equal to or in excess of 1 milligram per square centimeter (1.0 mg/cm^2), or more than half of one percent (0.5%) by weight, constitute a LBP. The HUD guideline for designating a painted surface as lead containing is consistent with the DHS. Paint that is chipping or peeling, or that may be removed from surfaces, and has a lead content equal to or greater than 1,000 milligrams per kilogram (mg/kg), would require handling as a California Title 22 hazardous waste. In addition, Los Angeles County Title 11 classifies LBP as a painted surface found to contain lead in concentrations greater than 0.7 mg/cm^2 or 600 mg/kg.

Because the site is located in the County of Los Angeles, positive readings of lead were levels above 0.7 mg/cm^2. Levels below 0.6 mg/cm^2 were considered negative or materials not containing lead.

7. FINDINGS AND OPINIONS

7.1. Asbestos

Based on the analytical results of bulk samples collected during this survey, ACMs located at the site are as follows:

- Approximately 1,000 square feet (SF) of maroon floor tile and mastic, containing 6 to 10 percent chrysotile asbestos, located in the sales office areas, observed to be in good condition.
- Approximately 3,500 SF of acoustical ceiling plaster, containing 8 to 10 percent chrysotile asbestos, located in the showroom, noted to be in good condition.
- Approximately 100 SF of window putty, containing 2 percent chrysotile asbestos, located on windows, noted to be in good condition.
- Approximately 20,000 SF of roofing material, containing 2 percent chrysotile asbestos, located on the showroom, new vehicle parking area, and service area roof, noted to be in good condition.
- Approximately 6,000 SF of roofing material, containing 3 percent chrysotile asbestos, located on the body shop roof, noted to be in good condition.
- Approximately 500 SF of plastic roof cement, assumed to be asbestos containing, located on roof penetrations, noted to be in good condition.

- Two transite flue pipes, one located near the gasoline aboveground storage tank and the other on the southwestern portion of the roof, assumed to be asbestos containing, noted to be in good condition.

Please note that quantities of ACMs are approximate. These numbers should be confirmed prior to removal or repair activities.

The presence of ACMs in a building does not necessarily mean that the health of the occupants is endangered. If these materials are in good condition and have not been disturbed or deteriorated, exposures are expected to be negligible. However, when ACM deteriorates, or is disturbed or is in damaged condition, such as during demolition operations, asbestos fibers may be released creating a potential health hazard for building occupants, maintenance personnel, and contractors.

7.2. Paint

Based on the analytical results of 276 XRF samples collected during our survey, the following painted surfaces contained concentrations of lead greater than 0.7 mg/cm^2:

Building Interior

- Brick walls – locker room, restrooms, and service area;
- Metal door – service area;
- Plaster walls and ceilings – restrooms, locker rooms, service area;
- Tile surfaces – offices and showroom;
- Wood baseboard – restroom;
- Wood cabinet components – service area;
- Wood door components – restrooms, parts department, service area;
- Wood handrail, railing, riser, and stringer – parts department, and service area; and
- Wood window components – parts department.

Building Exterior

- Metal bollard – north side;
- Metal door – west side;
- Metal downspout – south side;
- Metal window frame – south side; and
- Metal window sash – south side.

The presence of LBPs on the structure does not necessarily mean that the health of the occupants is endangered. If LBP is intact or in fair condition, and has not been disturbed or deteriorated, exposures are expected to be low. However, when LBPs are in a deteriorated condition, or are disturbed or damaged, such as during renovation, demolition or repair operations, lead dust may be released, creating a potential health hazard for building occupants, maintenance personnel, and contractors.

8. ABATEMENT ESTIMATE

Based upon the results of the ACM and LBP surveys, the following abatement and disposal estimate is provided:

ACM abatement	$40,000 to $60,000
LBP abatement	$45,000 to $60,000
Total	$85,000 to $120,000

The estimate is based upon our experience with similar projects, along with information provided by licensed abatement contractors. The estimate is provided for discussion purposes only.

9. RECOMMENDATIONS

Since ACMs and LBPs have been identified at the subject site, the following recommendations and precautions are provided:

- The identified ACMs should not be disturbed. Prior to renovation or demolition work which would disturb identified ACMs, a licensed asbestos abatement removal contractor should remove the ACMs.
- The identified LBPs should not be disturbed. Any LBPs in a non-intact condition should be abated and the component properly encapsulated. Prior to demolition work which would disturb identified LBPs, a licensed lead abatement removal contractor should remove the LBPs.
- Applicable laws and regulations should be followed, including those provisions requiring notification to building occupants, renovation contractors, and workers of the presence of asbestos and LBP.

10. LIMITATIONS

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited sampling and chemical analysis. Further assessment of potential adverse environmental impacts may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated. However, if additional suspect ACMs are encountered during demolition activities, these materials should be sampled by qualified personnel, and analyzed for content prior to further disturbance. In addition, please note that quantities of ACMs are approximate. These numbers should be confirmed prior to removal or repair activities.

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Our conclusions, recommendations and opinions are based on an analysis of the observed site conditions. It should be understood that the conditions of a site can change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

PLM has been known to miss asbestos in a small percentage of samples which contain asbestos. Negative PLM results cannot be guaranteed. Samples reported as <1% or none detected should be tested with TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval by LA Testing Inc. The above test must not be used by the client to claim product endorsement by NVLAP nor any agency of the United States Government.

LEAD-BASED PAINT INSPECTION REPORT

1.0 INTRODUCTION

This report presents the results of Barr & Clark Environmental's lead-based paint (LBP) inspection of the Chrysler Dealership located at 1201 North Broadway, Los Angeles, California (Subject Property). This document is prepared for the sole use of Ninyo and Moore, and any regulatory agencies that are directly involved in this project. No other party should rely on the information contained herein without prior written consent of Ninyo and Moore. The scope of services, inspection methodology, and results are presented below.

2.0 SCOPE OF WORK

The purpose of this inspection is to identify and assess the Lead-Based Paint (LBP) present on painted components at the subject property.

On June 19, 2003, Barr & Clark performed an inspection for lead-based paint at the subject property in Los Angeles, California. To comply with EPA and HUD guidelines, painted and varnished surfaces in every accessible "room equivalent" were sampled for the presence of LBP. The intent was to ascertain the presence of lead-based paint above the federal action level. If LBP was found, the inspection would identify individual architectural components and their respective concentrations of lead in such a manner that this report would be used to characterize the presence of LBP at this property.

3.0 PROPERTY DESCRIPTION

The subject property is a car dealership that was built circa 1940. It is a one-story building that is constructed over a slab foundation. The exterior walls are covered with stucco / concrete and the windows are a combination of fixed and transom types. At the time of this inspection, most of the painted surfaces were in good condition.

4.0 INSPECTOR'S QUALIFICATIONS

Alex Romani of Barr & Clark performed the inspection at the site using an RMD LPA-1 XRF spectrum analyzer instrument. He has attended the radiation safety course for handling the instrument, and completed an EPA approved curriculum in Lead in Construction Inspector / Risk Assessor Training.

At the time of this report, the California Department of Health Services, Childhood Lead Poisoning Branch, has implemented a State Certification Model Accreditation Plan adopted from the EPA. Alex Romani has received certification. Personnel certificate(s) have been provided in ***Appendix C.***

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

5.0 TESTING PROTOCOL

XRF Testing: Testing of the painted surfaces was patterned after the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing[i]. In every "room equivalent" within the tested property, one representative surface of each "testing combination" was tested. Multiple readings were collected to resolve inconsistencies in the test results.

Regulatory Compliance: Several public (government) agencies have a published "regulatory action level" to classify LBP. To further complicate matters, some of the established "levels" are quantified in different units of measurement. Listed below are the current regulatory agencies that have defined LBP, along with the respective action level:

Agency	Ordinance #	Action level (mg / cm^2)	Action level (ppm[ii])
HUD / EPA	24 CFR 35.86 & 40 CFR 745.103	1.0 mg / cm^2	5,000 ppm
L.A. County	Title 11, 11.28.010	0.7 mg / cm^2	600 ppm[iii]
OSHA / CAL OSHA	29 CFR 1926.62 & Title 8, 1532.1	*Not Specified*	600 ppm[iv]

HUD / EPA have recently issued the following guidance regarding units of measurement for paint samples:

"Report lead paint amounts in mg/cm² because this unit of measurement does not depend on the number of layers of non-lead-based paint and can usually be obtained without damaging the painted surface. All measurements of lead in paint should be in mg/cm², unless the surface area cannot be measured or if all paint cannot be removed from the measured surface area. In such cases, concentrations may be reported in weight percent (%) or parts per million by weight (ppm)."[v]

Furthermore, EPA has previously issued guidance on lead content classification as follows:

"... The rule, at 24 CFR 35.86 and 40 CFR 745.103 states that a lead-based paint free finding must demonstrate that the building is free of 'paint or other surface coatings that contain lead in excess of 1.0 milligrams per square centimeter *(1.0 mg / cm^2)* or 0.5 percent by weight *(5000 ppm)*.' The State standards are not applicable, whether more or less stringent, since a State cannot amend Federal requirements."[vi]

In recognition of the various action levels the testing results are classified as follows for this report:

- Painted surfaces with readings at or above 0.7 mg / cm^2 are considered - Positive
- Painted surfaces with readings at or below 0.6 mg / cm^2 are considered - Negative

The individual readings have been provided on all field data sheets. Any future change in action levels by one of the regulating agencies may affect the classification of results.

6.0 METHOD OF TESTING

Paint Testing: The method employed was X-ray fluorescence (XRF) using a Radiation Monitoring Device Lead Paint Analyzer (RMD LPA-1). The instrument was operated in "Quick Mode," where the duration for each test result is determined by a combination of:

- the actual reading relative to the designated action level;
- the age of the radioactive source; and
- the substrate on which the test was taken.

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

The instrument's calibration was verified according to the manufacturer's specifications in compliance with the Performance Characteristic Sheet (PCS) developed for this instrument.

The readings from this instrument produce a 95% confidence level that the "lead" reading accurately reflects the actual level of lead in the tested surfaces, relative to the federal action level.

7.0 SUMMARY OF RESULTS

Paint Sampling: Throughout the subject property, several of the painted components indicated the presence of lead-based paint (LBP) at or above the action level. The following summary lists the specific components that tested above the action level and their respective locations:

Interior

- Showroom Restroom – door
- Private Restroom Near Office 1 – door components and walls in toilet area
- Service Area – metal door (large sliding), cabinet components, walls, garage door components, stringer and handrail
- Customer Restroom – walls, baseboards and ceiling
- Customer Lounge – door frame
- Parts Department – door frame, window components, closet door frame, riser, stringer and railing
- Mechanic's Room – door frame and walls
- Locker Room – plaster wall and brick wall

Exterior

- Metal door on west side
- Window components
- Downspouts
- Bollards

Some of the tiled surfaces throughout the building also tested positive for lead. These surfaces were not painted and the lead is most likely in the glazing or the matrix of the tile itself.

Sampling for this inspection was representative and any components that were not tested but similar to those components that tested positive for LBP should be considered and treated as lead laden.

The field data and results for paint sampling may be found in ***Appendices A - B.***

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

8.0 RECOMMENDATIONS

The greatest potential for lead exposure from lead painted architectural components occurs when:

- the paint has become defective; or
- when the paint is applied to a friction / impact component where the paint is continually disturbed; or
- when the paint is disturbed through routine maintenance or renovation activities.

With this in mind, the following are our recommendations for this property:

- The results from this inspection should be provided to any individuals that may disturb the painted surfaces. It is encouraged to utilize professionals that have experience working with LBP.
- If renovation is scheduled in the near future (less than three months), all lead painted components that have been previously targeted for replacement should be replaced utilizing "lead safe" containment and work practices.
- ALL components that have been identified with defective lead paint should have the paint repaired as soon as possible. Any paint repair should be done utilizing "lead safe" containment, work practices, and clean-up techniques.
- All components with lead painted friction / impact surfaces should be treated to minimize the friction or impact as necessary.
- Lead painted components that **have not** been targeted for replacement should either be considered for abatement (replacement, enclosure, encapsulation, etc.) or included in an Operations & Management (O & M) Plan that will help to minimize exposures to lead hazards.
- All lead painted surfaces that are not expected to be impacted in the near future (less than three months) should also be included the O & M plan.
- In addition, the tenants or occupants of the dwelling should be notified of the test results and instructed in actions that they may perform to keep the living areas "lead safe."
- The tile surfaces are not a likely source of lead dust contamination as long as they remain intact. If future renovation or repair activities require that the tile be removed, or the surfaces disturbed, it should be done in a manner that does not break the tiles. If this is not feasible, this task should be assigned to a lead certified contractor.

9.0 TITLE X REQUIREMENTS

A copy (or summary) of this report must be provided to new lessees (tenants) and purchasers of this property under Federal law (24 CFR part 35 and 40 CFR part 745) before they become obligated under a lease or sales contract. The complete report must also be provided to new purchasers and it must be made available to new tenants. Landlords (lessors) and sellers are also required to distribute an educational pamphlet approved by the U.S. Environmental Protection Agency and include standard warning language in their leases or sales contracts to ensure that parents have the information they need to protect their children from lead-based paint hazards. This report should be maintained and updated as a permanent maintenance record for this property.

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

10.0 INSPECTION LIMITATIONS

This inspection was planned, developed, and implemented based on Barr & Clark's previous experience in performing lead-based paint inspections. This inspection was patterned after Chapter 7 of the *HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997 Revision)*. Barr & Clark utilized state-of-the-art-practices and techniques in accordance with regulatory standards while performing this inspection. Barr & Clark's evaluation of the relative risk of exposure to lead identified during this inspection is based on conditions observed at the time of the inspection. Barr & Clark cannot be responsible for changing conditions that may alter the relative exposure risk or for future changes in accepted methodology. Enclosed are the diagram(s), actual test results, and all relevant certifications and licenses.

---

i 1997 Revision
ii Parts per million
iii Applies to sale and application of LBP.
iv Applies to construction related activities
v Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997 Revision).

Alex J. Romani ID # 10575

HomeSafe
Accredited Lead Training

This is to Certify that

Alex J. Romani

Has Successfully Completed the Course

Lead Related Construction

Inspector/Risk Assessor

(HSI-036-IA)

Possession of this certificate does not constitute certifcation
by the California Department of Health Services (DHS)

Training Date:: 10/08/01 - 10/12/01
Examination Date: 10/12/01
Certificate: #48478

Kathleen Gura
Training Director

HomeSafe, Inc., 24662 Redlands Blvd., Loma Linda, CA 92354 • Ph (909) 796-7565 • Fax (909) 796-2155

Certificate of Achievement

This is to certify that

Alex Romani
Barr & Clark

on the 31st day of October 2001 successfully completed the factory training for

RMD's LPA-1 Lead Paint Inspection System

including, but not limited to, the topics of Radiation Safety and the Proper Use of the Instrument.

Jacob Paster, Vice President, RMD
44 Hunt St., Watertown, Massachusetts

OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

EXECUTIVE SUMMARY

1201 North Broadway Phase I Cultural Resources Study

Environmental Science Associates (ESA) has been retained by Johnson Fain to prepare a Phase I Cultural Resources Study in support of an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed 1201 North Broadway Project (Project). Johnson Fain is proposing to develop the approximately 1.07-acre site located at 1201 North Broadway in the City of Los Angeles with a mixed use, seven-story building. This Phase I Cultural Resources Study has been prepared in support of the IS/MND in compliance with the California Environmental Quality Act (CEQA). The City of Los Angeles Planning Department is the lead agency for the Project.

(In Progress)

1201 NORTH BROADWAY
Phase I Cultural Resources Study

1. Introduction

Environmental Science Associates (ESA) has been retained by Johnson Fain to prepare a Phase I Cultural Resources Study in support of an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed 1201 North Broadway Project (Project). Johnson Fain is proposing to develop the approximately 1.07-acre site located at 1201 North Broadway in the City of Los Angeles with a mixed use, seven-story building. The building will consist of a total floor area of 93,112 square feet and will include 124 residential units, and a two-level subterranean parking garage. This Phase I Cultural Resources Study has been prepared in support of the IS/MND in compliance with the California Environmental Quality Act (CEQA). The City of Los Angeles Planning Department is the lead agency for the Project.

ESA personnel involved in the preparation of this study include: Monica Strauss, M.A., R.P.A., Principal Investigator; Sara Dietler, B.A., Senior Cultural Resources Specialist, task lead, and report author; Amanda Kainer, M.S., Senior Architectural Historian and report author; Chris Taylor, M.H.P., Architectural Historian, report author, and surveyor; Fatima Clark, B.A., report author; and Jason Nielsen, GIS specialist. Resumes of key personnel are provided in **Appendix A**.

1.1 Project Description, Location, and Scope of Study

The proposed project is the redevelopment of a one-acre site (Project site) at 1201 N. Broadway in the Central City North Community Plan Area of the City of Los Angeles (**Figure 1**, *Regional Map,* attached). The Project site will be developed with a seven-story office building with four levels of subterranean parking. The Project site is depicted on the United States Geological Survey ("USGS") 1966 (photo-revised 1981) 7.5' Los Angeles, California topographic quadrangle map in an un-sectioned portion of Township 1 South, Range 13 West (**Figure 2**, *Vicinity Map,* attached). Specifically, the Project site is bounded by Savoy Street on the north and east, Bishops Road on the west, and North Broadway on the south (**Figure 3**, *Aerial Photograph,* attached). The Project site is currently developed with two interconnected one-story buildings housing the Johnson Fain studio, an open graveled parking area, and a small surface parking lot. The buildings represent adaptive reuse of the c. 1937 Basso Chrysler/Jeep Dealership Cadillac dealership and a c. 1924 industrial building.

Figure 1 Regional Location Map

Figure 2 Project and Resource Location

Figure 3 Project site and Survey Coverage

ESA conducted a phase I Cultural Resources Assessment of the proposed project to identify potential impacts to historic and archaeological resources for the purpose of complying with CEQA, local cultural resource guidelines, and to support an IS/MND. The scope of work for this assessment included: archival research consisting of a cultural resources records search through the California Historical Resources Information System-South Central Coastal Information Center (SCCIC) located at California State University, Fullerton, , a Sacred Lands File (SLF) search through the California Native American Heritage Commission (NAHC), review ofa historic maps and photographs, review of the Phase I Environmental Site Assessment, and review of the Geotechnical Hazards Report; a building survey of the Project site; and the preparation of this technical report containing a summary of the study methods, results, and recommendations..

2. Setting

2.1 Environmental Setting

The Project site is located in the Los Angeles Basin. The basin is formed by the Santa Monica Mountains to the northwest, the San Gabriel Mountains to the north, and the San Bernardino Mountains and San Jacinto Mountains to the east. The basin was formed by alluvial and fluvial deposits derived from these surrounding mountains. Prior to urban development and the channeling of the Los Angeles River, the Project site was likely covered with marshes, thickets, dense woodland, and grassland. The floodplain forest of the Los Angeles Basin formed one of the most biologically rich habitats in southern California. Willow, cottonwood and sycamore, and a dense underbrush of alder, hackberry, and shrubs once lined the Los Angeles River as it passed near present-day downtown Los Angeles (Gumprecht, 2001). Although historically most of the Los Angeles River was dry for at least part of the year, shallow bedrock in the Elysian Park area north of downtown forced much of the river's underground water to the surface. This allowed for a steady year-round flow of water through the area that later became known as downtown Los Angeles (Gumprecht, 2001).

2.2 Cultural Setting

Prehistoric Overview

The earliest evidence of occupation in the Los Angeles area dates to at least 9,000 years before present (B.P.) and is associated with a period known as the Millingstone Cultural Horizon (Wallace 1955; Warren 1968). Departing from the subsistence strategies of their nomadic big-game hunting predecessors, Millingstone populations established more permanent settlements. These settlements were located primarily on the coast and in the vicinity of estuaries, lagoons, lakes, streams, and marshes where a variety of resources including seeds, fish, shellfish, small mammals, and birds were exploited. Early Millingstone occupations are typically identified by the presence of handstones (manos) and millingstones (metates), while those Millingstone occupations dating later than 5,000 years B.P. contain a mortar and pestle complex as well, signifying the exploitation of acorns in the region.

Although many aspects of Millingstone culture persisted, by 3,500 years B.P. a number of socioeconomic changes occurred (Erlandson 1994; Wallace 1955; Warren 1968). These changes are associated with the period known as the Intermediate Horizon (Wallace 1955). Increased populations in the region necessitated the intensification of existing terrestrial and marine resources (Erlandson 1994). This was accomplished in part through the use of the circular shell fishhook on the coast, and more abundant and diverse hunting equipment. Evidence for shifts in settlement patterns has been noted at a variety of locations at this time and is seen by many researchers as reflecting increasingly territorial and sedentary populations. The Intermediate Horizon marks a period in which specialization in labor emerged, trading networks became an increasingly important means by which both utilitarian and nonutilitarian materials were acquired, and travel routes were extended. Archaeological evidence suggests that the margins of numerous rivers, marshes, and swamps within the Los Angeles River Drainage served as ideal locations for prehistoric settlement during this period. These well-watered areas contained a rich collection of resources and are likely to have been among the more heavily trafficked travel routes.

The Late Prehistoric period, spanning from approximately 1,500 years B.P. to the mission era, is the period associated with the florescence of the contemporary Native American group known as the *Gabrielino* (Wallace 1955). Coming ashore near Malibu Lagoon or Mugu Lagoon in October of 1542, *Juan Rodriguez Cabrillo* was the first European to make contact with the *Gabrielino* Indians. Occupying the southern Channel Islands and adjacent mainland areas of Los Angeles and Orange Counties, the *Gabrielino* are reported to have been second only to their Chumash neighbors in terms of population size, regional influence, and degree of sedentism (Bean and Smith 1978). The *Gabrielino* are estimated to have numbered around 5,000 in the pre-contact period (Kroeber 1925) and maps produced by early explorers indicate that at least 26 *Gabrielino* villages were within proximity to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht 1999). Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game were hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith 1978; Reid 1939 [1852]). The primary plant resources were the acorn, gathered in the fall and processed with mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly leafed-cherry (Reid 1939 [1852]).

2.3 Ethnographic Setting

2.3.1 Gabrielino-Tongva

The Project site is located in a region traditionally occupied by the Takic-speaking Gabrielino-Tongva Indians. The term “Gabrielino” is a general term that refers to those Native Americans who were administered by the Spanish at the Mission San Gabriel Arcángel. Many contemporary Gabrielino identify themselves by the name “Tongva.” Prior to European colonization, the Gabrielino-Tongva occupied a diverse area that included: the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Kroeber, 1925). Their neighbors included the Chumash to the north, the Juañeno to the south, and the Serrano and

Cahuilla to the east. The Gabrielino-Tongva are reported to have been second only to the Chumash in terms of population size and regional influence (Bean and Smith, 1978). The Gabrielino language, like the Tataviam language, was part of the Takic branch of the Uto-Aztecan language family.

The Gabrielino-Tongva Indians were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game were hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith, 1978). The primary plant resources were the acorn, gathered in the fall and processed in mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly-leafed cherry.

Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrielino-Tongva are estimated to have had a population numbering around 5,000 in the pre-contact period (Kroeber, 1925). Villages are reported to have been the most abundant in the San Fernando Valley, the Glendale Narrows area north of downtown, and around the Los Angeles River's coastal outlets (Gumprecht, 2001). Gabrielino villages are reported by early explorers to have been most abundant near the Los Angeles River, in the area north of downtown, known as the Glendale Narrows, and those areas along the river's various outlets into the sea. Among those villages north of downtown are *Maawnga* in the Glendale Narrows; *Totongna* and *Kawengna,* in the San Fernando Valley; *Hahamongna*, northeast of Glendale; and the village of *Yangna*, in the vicinity of present-day downtown Los Angeles.

The exact location of *Yangna*, within downtown Los Angeles continues to be debated, although some believe it to have been located at the present-day location of the Civic Center (McCawley 1996). Other proposed locations are near the present day Union Station (Chartkoff and Chartkoff 1972:64), to the south of the old Spanish Plaza, and near the original site of the Bella Union Hotel located on the 300 Block of North Main Street (Robinson 1963:83, as cited in Dillon 1994:30). Dillon (1994:30) hypothesizes that the Union Station location is an unlikely spot for a large village or habitation, as it lies within the annual Los Angeles River flood zone. Local sources such as the Echo Park Historical Society, report that when Gaspar de Portola and Father Juan Crespi camped on the river bank opposite the North Broadway Bridge entrance to Elysian Park, they were served refreshments by *Yangna* Indian villagers from the current location of the Los Angeles Police Academy (Echo Park Historical Society 2008). The Los Angeles Police Academy is located in the northern portion of Elysian Park, which does not seem a likelylocation for the village because….. It is possible however, that the local histories are actually referring to the village of *Maawnga*, which was reported to have been originally located within the *Rancho de los Felis*. This rancho originally encompassed Griffith Park and extended south to the northern portion of Elysian Park. The village of *Maawnga*, also recorded as *Maungna*, is believed to have been located "high on a bluff overlooking Glendale Narrows in the hills now occupied by Elysian Park" (Gumprecht 1999:31).

A third community or village, named *Geveronga*, may have been located in the vicinity of the current downtown Los Angeles' city center, reported in the San Gabriel baptismal records as located "in the racheria adjoining the Pueblo of Los Angeles" (McCawley 1996:57).

2.4 Historic Setting

2.4.1 Los Angeles Overview

The *Gabrielino* were virtually ignored between the time of Cabrillo's visit and the Spanish Period, which began in 1769 when Gaspar de Portola and a small Spanish contingent began their exploratory journey along the California coast from San Diego to Monterey. Passing through the Los Angeles area, they reached the San Gabriel Valley on August 2 and traveled west through a pass between two hills where they encountered the Los Angeles River and camped on its east bank near the present-day North Broadway Bridge and the entrance to Elysian Park. This location has been designated California Historic Landmark Number 655, the Portola Trail Campsite. Father Crespi (a member of Portola's party) indicated in his diaries that on that day they "entered a spacious valley, well grown with cottonwoods and alders, among which ran a beautiful river. This plain where the river runs is very extensive and…is the most suitable site for a large settlement" (The River Project 2001). He goes on to describe this "green, lush valley"; its "very full flowing, wide river"; the "riot of color" in the hills; and the abundance of native grapevines, wild roses, grizzly, antelope, quail and steelhead trout. Crespi observed that the soil was rich and "capable of supporting every kind of grain and fruit which may be planted." The river was named *El Rio y Valle de Nuestra Senora la Reina de Los Angeles de la Porciuncula*.

Missions were established in the years that followed the Portola expedition, the fourth being the Mission San Gabriel Archangel founded in 1771 near the present-day city of Montebello, approximately 7.5 miles east of the Project site. By the early 1800s, the majority of the surviving *Gabrielino* population had entered the mission system. The Gabrielino inhabiting Los Angeles County were under the jurisdiction of either Mission San Gabriel or Mission San Fernando. Mission life offered the Indians security in a time when their traditional trade and political alliances were failing and epidemics and subsistence instabilities were increasing (Jackson 1999).

On September 4, 1781, which was 12 years after Crespi's initial visit, the *Pueblo de la Reina de los Angeles* was established not far from the site where Portola and his men camped. Watered by the river's ample flow and the area's rich soils, the original pueblo occupied 28 square miles and consisted of a central square, surrounded by 12 houses, and a series of 36 agricultural fields occupying 250 acres, plotted to the east between the town and the river (Gumprecht 1999).

An irrigation system that would carry water from the river to the fields and the pueblo was the communities' first priority and was constructed almost immediately. The main irrigation ditch, or *Zanja Madre*, was completed by the end of October 1781. It was constructed in the area of present-day Elysian Park, and carried water south (and located directly across Broadway Street from the current Project site) to the agricultural lands situated just east of the pueblo (Gumprecht 1999).

By 1786, the flourishing pueblo attained self-sufficiency and funding by the Spanish government ceased (Gumprecht 1999). Fed by a steady supply of water and an expanding irrigation system, agriculture and ranching grew, and by the early 1800s the pueblo produced 47 cultigens. Among the most popular were grapes used for the production of wine (Gumprecht 1999). Vineyards blanketed the landscape between present-day San Pedro Street and the Los Angeles River. By 1830 an estimated 100,000 vines were being cultivated at 26 Los Angeles vineyards. Over 8,300 acres of land were being irrigated by the *zanjas* during the 1880s (Gumprecht 1999).

The authority of the California missions gradually declined, culminating with their secularization in 1834. Although the Mexican government directed that each mission's lands, livestock, and equipment be divided among its converts, the majority of these holdings quickly fell into non-Indigenous hands. Mission buildings were abandoned and quickly fell into decay. If mission life was difficult for Native Americans, secularization was typically worse. After two generations of dependence on the missions, they were suddenly disenfranchised. After secularization, "nearly all of the Gabrielinos went north while those of San Diego, San Luis, and San Juan overran this county, filling the Angeles and surrounding ranchos with more servants than were required" (Reid 1977 [1851]:104). Upon his 1852 visit to Los Angeles, John Russel Barlett wrote,

> I saw more Indians about this place than in any part of California I had yet visited. They were chiefly mission Indians, i.e., those who had been connected with the missions and had derived their support from them until the suppression of those establishments. They are a miserable, squalid-looking set, squatting or lying about the corners of the streets with no occupation. They have no means of obtaining a living, as their lands are taken from them, and the missions for which they labored and which provided after a sort for many thousands of them, are abolished (as cited in Sugranes 1909:77).

The first party of U.S. immigrants arrived in Los Angeles in 1841, although surreptitious commerce had previously been conducted between Mexican California and residents of the United States and its territories. Included in this first wave of immigrants were William Workman and John Rowland, who soon became influential landowners. As the possibility of a takeover of California by the United States loomed large, the Mexican government increased the number of land grants in an effort to keep the land in the hands of upper-class *Californios* like the Domínguez, Lugo, and Sepúlveda families (Wilkman and Wilkman 2006:14–17). Governor Pío Pico and his predecessors made more than 600 rancho grants between 1833 and 1846, putting most of the state's lands into private ownership for the first time (Gumprecht 1999). Having been established as a pueblo, property within Los Angeles could not be dispersed by the governor, and this task instead fell under the city council's jurisdiction (Robinson 1979).

A constant struggle to bring water to the residents of the pueblo necessitated the construction of Echo Park Reservoir, the Silverlake Reservoir, and the further expansion of the *zanja* irrigation ditches. When these measures proved insufficient, a more permanent solution to Los Angeles' water shortage was sought. Under the direction of city engineer William Mulholland, the Los Angeles Bureau of Water Works and Supply constructed the 238-mile-long Los Angeles Aqueduct. This 5-year project, completed

in 1913, employed the labor of more than 5,000 men and brought millions of gallons of water into the San Fernando (now Van Norman) Reservoir (Gumprecht 1999). Now able to offer water and sewer service at a grand scale, many smaller cities were voluntarily incorporated by Los Angeles (Robinson 1979:244).

When Los Angeles was connected to the transcontinental railroad via San Francisco on September 5, 1876, it experienced a significant boost in population. The city would experience its greatest growth in the 1880s when two more direct rail connections to the East Coast were constructed. The Southern Pacific completed its second transcontinental railway, the Sunset Route from Los Angeles to New Orleans, in 1883 (Orsi, 2005). In 1885, the Santa Fe Railroad completed a competing transcontinental railway to San Diego, with connecting service to Los Angeles (Mullaly and Petty, 2002). The resulting fare wars led to an unprecedented real estate boom, as well as affordable cross-country fares for immigrants. Despite a subsequent collapse of the real estate market, the population of Los Angeles increased 350 percent in the decade between 1880 and 1890 (Dinkelspiel, 2008).

The population boom of the 1880s drove the demand for real estate in Los Angeles. Farmland south and east of the city began to be replaced by residential and commercial development. Large tracts of agricultural land, now far more valuable for residential development, were subdivided and sold (Gumprecht, 1999).

From 1890 to 1900, the city continued to grow, and many infrastructure projects were completed during this decade (McWilliams, 1946). E.L. Doheny discovered oil in 1892, adding fuel to the flame. From 1900 to 1920, Los Angeles became a tourist mecca (McWilliams, 1946). The Los Angeles Aqueduct was constructed and a large portion of the San Fernando Valley annexed to the city during the first decade of the 20th century. From 1920 to 1930, Los Angeles experienced another population explosion, due in part to the automobile and the development of the movie industry. All told, between 1890 and 1930, the population of Los Angeles increased from 50,000 to 1.2 million people (Wild, 2005).

2.4.3 Historic Context of the Project site

The earliest depiction of the Project site is a map produced by U.S. Army Lieutenant E.O.C. Ord in 1849 (Ord, 1857). The map indicates that at that time the area east of Main Street and west of the Los Angeles River, including the Project site, was entirely devoted to agriculture, primarily vineyards (Baugh, 1942). A history of the Project site and immediate vicinity as it was developed from agricultural use, to transportation, a cemetery, residential and commercial, is presented below.

2.5.1 Water Systems

Water—too much, or too little—has shaped much of California's history. Rain falls unevenly and seasonally over the length of the state, and all too often California faces prolonged drought or flood cycles. The state has a generally Mediterranean climate, with little rain falling through the summer months. Although the amount of available water varies enormously from northern redwood regions of heavy rainfall to dry southern deserts, California as a whole is considered semiarid, and much of the state relies on winter snow in the mountains to provide spring and summer runoff to water the valleys below.

For the Pueblo of Los Angeles, the *zanjas*, or publicly owned irrigation ditches, sustained the area for many years and enabled ranching and cultivation of the fertile floodplains. The *zanjas* were established by the residents' Mexican predecessors, and consisted of gravity systems, which resulted in the irrigation of lands that lay to the south of the source. Lands at a higher elevation could not be irrigated by the *zanjas*. The *Zanja Madre* (Mother Ditch) had been constructed, branching off of the river and carrying the water south to the agricultural lands surrounding the pueblo. As the pueblo grew and more water was diverted from the river, the supply began to dwindle. Initially, however, there was little worry about the future water needs of the city, and no regulation of the water distribution itself. Typically, farmers would dig their own ditches from the main ditches or from the river. Private water carriers hauled and sold water to households for domestic use (Gumprecht 1999).

By the mid-19th century, city officials established a system of water use fees and rules to govern the *zanjas*. They created the official city position of *zanjero*, the highest paid of any public official in Los Angeles. The duties of the *zanjero* varied including issuance of permits for water usages, maintenance of the ditches, maintenance of the city dam, and even the early coordination of flood control work on the Los Angeles River (Gumprecht 1999). A map compiled by Gumprecht (1999) shows the extent of the *zanja* system in 1880 (Figure 11).

While the *zanjas* worked well for irrigation, the water was frequently unsuitable for domestic purposes. The city had no sewer system or other outlet for its liquid waste, and the *zanjas* were being used for laundry and bathing, as well as trash and sewage disposal. Several efforts to pipe domestic water directly to homes were tried as early as 1864. As the pueblo development and population expanded, an effort was made to develop a residential water system in Los Angeles with projects designed to distribute water by directly piping water into homes from local springs and the river. In what seemed to be a laborious process, a former county judge named William G. Dryden was eventually awarded a franchise to distribute water from a series of springs located within present-day Chinatown at the intersection of College and Alameda. These springs were located on low lying ground and known as the Abila Springs and were formed by the underground flow of the Los Angeles River. Dryden created a system of distribution by forming the Los Angeles Water Works Company in 1858, and building a forty-foot water wheel in the Zanja Madre, as well as other components of the system. This system provided running water to the homes of the city's elite residing near the plaza. Eventually the system failed due to seasonal flooding and the plaza's residents were once again reduced to relying on water carted in for their use (Gumprecht 2001:63-64).

After several more attempts by the City, (who had decided to develop their own water system), John Luis Sainsevain, who had been integral in development of the system, owned a lease to the domestic supply system and he erected a water wheel at the dam that he had built on the river. In addition to the wheel he built a small reservoir with a capacity of the 700,000 gallons near the Catholic Cemetery, located at the intersection of North Broadway Street and Bishops Road (**Figure 4. *Project Area in 1868.***),and likely directly adjacent to the northeast side of the Project site.

Figure 4. Project Area 1868

To keep up with demand, the city allowed several private companies to be formed in order to provide domestic supplies of water. The city continued to oversee the irrigation system, eventually enclosing several of the *zanjas* or creating ornamental *zanjas* in several areas (Gumprecht 1999).

As Southern California grew, the Los Angeles River became an inadequate supply of water for the residential and industrial development that gradually displaced agricultural uses. With the arrival of the Southern Pacific Railroad, the demand became so great that the Los Angeles City Water Company began tapping the river's water supply before it even reached the surface. Water supply reservoirs began to be used and the *zanja* system was gradually abandoned and, in some cases, dismantled (Gumprecht 1999). By 1902, the Los Angeles municipal government took back jurisdiction of its own water needs and purchased the existing water system, which consisted of seven reservoirs and 337 miles of pipe.

Figure 7. Bird's Eye View of Los Angeles by B.W. Pierce, 1894, Showing the Project Site and Los Angeles River, View North (Library of Congress American Memory Collection)

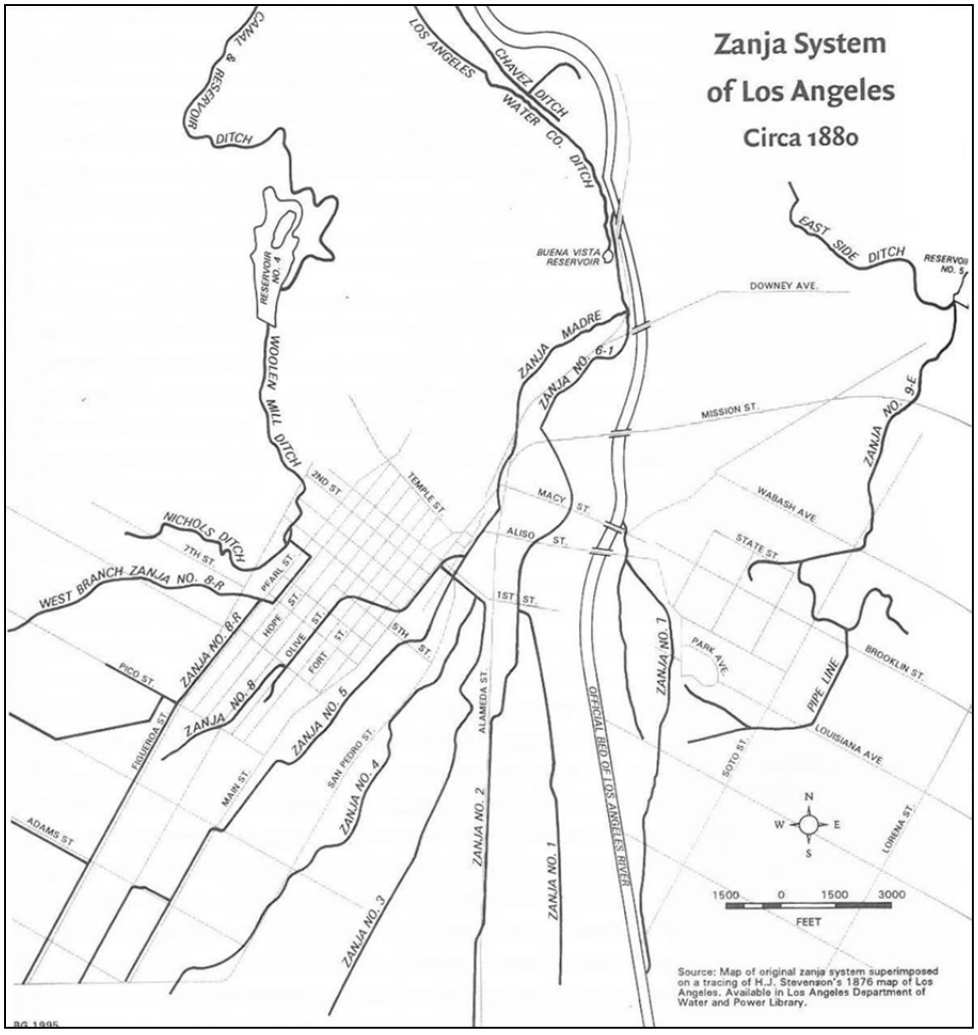

Figure X. Los Angeles *Zanja* System in 1880 (Gumprecht 1999)

2.5.1 Old Calvary Cemetery

The Project Site is located immediately adjacent to the former location of the Old Calvary Cemetery which was blessed in 1844. Prior to the opening of the Old Calvary Cemetery in 1846, the only operating burial ground was located at the Plaza Church which was in use from 1822 to approximately 1844 based on information acquired from San Gabriel Mission records (Carpenter 1973). The Project Site is located less than a mile to the north of the Plaza Church.

Beginning in 1837, Father Alejo J. A. Bachelot (parish priest) envisioned the expansion of the Plaza Church Cemetery; however, the idea was not put into action. In 1838, a petition was signed by several individuals (Martín Agustín, Carlos Baric, Ygnacio Coronel, Vicente de la Osa, Augustín Olvera, Abel Stearns, and Luis Vignes) asking for the Plaza Church Cemetery to be moved to a distant place as its location was "very injurious to the health" of its residents. Although this matter was referred to a committee, no action was taken to pursue this request. In 1839, the same request by 26 residents was submitted to a committee and the Ayuntamiento (city council) approved the request on October 19 of the same year. The approval was received "with

the condition that the solicitors should bear the cost [and] the Ayuntamiento write the neighborhood to join in the expense". In 1844, a plot of 100 varas square (old Spanish unit of length) was selected at the foot of the hills along North Broadway (previously known as Calle de Eternidad/Eternity Street/Buena Vista Street) (Carpenter 1973). The register list for the Plaza Church Cemetery lists more than 650 burials and upon its closure, the bodies were reported to have been moved to the new burial ground at Old Calvary Cemetery (Lost Los Angeles article). Disputes occurred as the city council was in favor of allowing its residents the use of the Old Calvary Cemetery at free of charge or duty (Carpenter 1973:13).

Preparations for the Old Calvary Cemetery are known to have started out with the construction of an adobe building and a receiving vault or chapel conducted by prison labor (Carpenter 1973; Berman 2009). Eventually with the fear of the spread of smallpox from Santa Barbara, on July 8, 1844, Father Tomás Estenaga expressed his intentions in a letter and wishing to bless the site as soon as it was fenced off. The cemetery was reported to have cost "$43.37 ½ in city funds"; however, citizens are also known to have contributed. The Old Calvary Cemetery was blessed in 1844 by Father Estenaga on All Souls Day; but "formally consecrated" in 1866 by Bishop Thaddeus under the name of Calvary Cemetery (Carpenter 1973:14, 15).

In 1856 an incident is known to have occurred at the Old Calvary Cemetery where the lock at the gate was forced and a non-permitted Catholic burial was buried illegally. By 1858, expansion was considered as the cemetery was: "unsuited…small [and] sadly over crowded...". The same article also mentioned that "[l]and [had] been procured adjoining the present graveyard, in front and rear, but the fence ought to be taken down, and the whole enclosed with a substantial brick wall. To accomplish this, it is proposed to divide the addition into lots, the cost of which would complete the improvements…"(Carpenter 1973:17).

The Old Calvary Cemetery was the burial place for prominent families such as the Pico, Boyle, Bell, Chapman, Dominguez, Bandini and Downey families. In 1903, the skeleton of María Ygnacia Pico (wife of the former Governor of California, Pío Pico) was displaced from its coffin by a vandal in search of valuables. A year later, the tomb of Andres Briswalter (a two-story brownstone and marble chapel which had cost $25,000 more than $500,000 today) was also vandalized. Briswalter was one of the city's first wealthy residents who had come to Los Angeles in 1853. Upon his death, Briswalter's fortune was estimated at $750,000, about $17 million today (Berman 2009). In 1921, the bodies of Pío Pico and María Ygnacia Pico were moved to the Walter P. Temple Memorial Chapel by their descendants (KCET 2013; Los Angeles Times 1921).

According to Monsignor Francis J. Weber, archivist for the Archdiocese of Los Angeles, the interment records from Old Calvary Cemetery have been lost. In 1925, the city council adopted an ordinance which required that all bodies be removed by 1928. According to Weber "[b]urial vaults weren't universally used…graves were not as well defined…Without the record, it's impossible to know how many bodies were left behind"(Berman 2009).

According to a Los Angeles Times article, approximately between 5,000 to 10,000 bodies were removed to the new Calvary Cemetery on East Whittier Boulevard. The work was conducted by

prisoners who were rewarded with jugs of wine. Some of the burials found had their "bodies face down with a bottle in hand" (Los Angeles Times 1978).

In 1933, during the filling of old vaults by workers, the body of a 40 year old man was found. It was reported that the body had probably been overlooked when the cemetery was abandoned (Los Angeles Times 1933). The Old Calvary Cemetery is now the site of Cathedral High School with the boundaries of the site going through the (110) Pasadena Freeway (Los Angeles Times 1978). The Old Calvary Cemetery served Catholics of the city and surrounding vicinity until 1896 (Carpenter 1973).

Los Angeles State Historic Park/Cornfield

The vicinity of the Los Angeles State Historic Park (located adjacent to the Project Site on the south side of North Broadway Street) was developed for agricultural use in the Spanish and Mexican periods. Beginning in 1804, Francisco Avila established vineyards in this location (California State Parks n.d.). The area was served by the *Zanja Madre*, and a waterwheel was built just west of the current park land to divert water from the *zanja*.

In the latter portion of the 19th century, River Station (Figure X), a Southern Pacific Railroad facility, also known as Los Angeles Junction, was opened in this location (Mullaly and Petty 2002). This facility opened in 1875 and served as an important transportation hub, with Southern Pacific opening a freight house and depot in this location. River Station expanded as the volume of railroad traffic grew, and a turntable, freight house, blacksmith shop, machine shop, car shop, and other facilities were added (Mullaly and Petty 2002; California State Parks n.d.). In 1889, Southern Pacific built Arcade Depot a few miles to the south on Alameda Street, and passenger service was moved to this location (Mullaly and Petty 2002: 33). River Station continued to grow and served as the headquarters for Southern Pacific operations in Southern California. By the 1880s, Southern Pacific was the largest employer in Los Angeles (California State Parks n.d.).

Between 1902 and 1904, Southern Pacific built a new, more modern facility in the Lincoln Heights area of Los Angeles. Southern Pacific continued to use the land within the present day Los Angeles State Historic Park as a freight operations facility after 1904 (Figure X). Southern Pacific use of the facility continued until 1992. In 2001, California State Parks took possession of the 32-acre parcel where the Southern Pacific facility had stood. In 2005, the former site of River Station was designated a State Historic Park.

The River Station area was colloquially known as "the Cornfield" because of the crops that grew there before the railroads arrival (Rasmussen 2003). In 2005 a public art installation on the property entitled "Not a Cornfield," involved the planting of 32 acres of corn for one agricultural cycle, a commentary on the city's early agricultural roots and the need to reclaim abandoned industrial-era complexes (Not a Cornfield 2012)

2.6 Early Single-Family Residential Development (1880-1930)[1]

Los Angeles' exponential growth during the inter-war period, more specifically the 1920s, is well documented, however it was a population boom 40 years earlier that saw Los Angeles become a major American city. While the state and city experienced steady expansion through the mid nineteenth century, the 1880s were a period of unprecedented population growth, leading up to The Great Boom of 1886-87. "Rail communication with the North was opened in 1877, but the boom did not really begin until 1881, when the Southern Pacific, which had gone on building east, met the Santa Fe at Deming." [2] The new line produced a direct route between Los Angeles and eastern markets through New Orleans. To sell land adjacent to their new rail lines, the railroads promoted California real estate. In 1876, the Southern Pacific constructed the River Station (current site of the Los Angeles State Historic Park and immediately south of the Project Site), welcoming thousands of visitors to Los Angeles. It was during the great boom when the Buena Vista Tract, where the Project Site is located, was subdivided in 1886. Driven by railroad development, Los Angeles' population grew from just over 5,000 residents in 1870 to 15,000 in 1882 and 25,000 by 1883. In addition to population growth, land values more than doubled during the 1880s. At the end of the decade, Los Angeles' population was over 75,000 and a plot of land that once sold for $1,000 was being sold for $2,500.[3]

2.6.1 Buena Vista Tract

The Project Site is situated in the Buena Vista Tract, surveyed in May 1886 at the request of Dobinson and Rowan from the Reservoir Lots subdivision surveyed on April 12, 1871, on lots 1, 2, 7, 8, 9, and 10 (tract map partially excerpted in Figure # and included in full in Appendix #). Laid out with rectangular lots measuring approximately 40 feet wide by 130 feet deep, the Buena Vista Tract was irregular shaped consisting of two blocks containing thirty-three lots. Block 1, where the Project Site is located, was bounded by Bishops Road, North Broadway (formerly Buena Vista Street), Savoy Street, and Elysian Park (Radio Hill Gardens). Block 2 wrapped behind Block 1 and fronted Savoy Street and North Broadway (formerly Buena Vista Street). A *Los Angeles Times* ad dated September 21, 1886, advertised the new Buena Vista Tract as "desirable" and "commanding a splendid view of East Los Angeles, Boyle Heights and river" with a graded street, laid water, and convenience to the railway depot and Capitol Mills.[4] The ad also speculated land values would increase with the construction of the Buena Vista (North Broadway) Bridge, which opened in 1911.[5]

Figure 4
Buena Vista Tract Map, 1886

The earliest Sanborn map available depicting the Project Site and vicinity is 1894. This map indicates that the Buena Vista Tract was developed primarily with single-family residences with the Old Calvary Cemetery immediately southwest of the Project Site and the Southern Pacific rail yards to the south and southeast. In regards to the Project Site, Lots 7, 9, and 10 were improved with single-family residences, while lot 9 was vacant. Original construction permits for these single-family residences are not available because the LADBS records begin in 1905. The next available Sanborn map from 1906 shows the Buena Vista Tract was almost entirely improved with single-family residences with the exception of six vacant lots. On the Project Site, Lots 7, 8, 9 and 10 were developed with single-family residence and the rear Lots 1 and 2 remained vacant.

After World War I, the character of the Project Site and vicinity was an area in transition. The west-side of North Broadway, formerly Buena Vista Street, shifted from being primarily improved with residences to improvements associated with commercial uses. Three of the four residences on the Project Site were relocated to make way for the construction of the auto dealership and repair shop. As shown in Table 1 below, the residence on Lot 7 and 8 were relocated in 1924 and the residence on Lot 9 was relocated in 1927. Nine years later, the residence on Lot 10 was relocated in 1936. The new auto dealership and repair shop, improved on the Project Site in 1924, was responding to the increased popularity of the automobile and automobile traffic along North Broadway, one of the main routes to downtown.[6] Cathedral High School was also built on the grounds of the Old Cathedral Cemetery in the mid-1920s.

2.7 Commercial Development and the Automobile, 1910-1970

The emergence of the automobile in the 1910s shaped the layout of the City shifting development patterns from an agricultural landscape with pockets of development to a sprawling metropolis. Automobile registration in Los Angeles County was less than 20,000 in 1910, however, by 1920 registration exceeded 100,000 due to the development of an affordable car, specifically the Ford Model T.[7] The current improvements on the Project Site along with the commercial of growth along North Broadway during the 1920s exemplify the development patterns associated with the automobiles.[8] This is most likely explained by the widespread use of the automobile and the completion of the Buena Vista (North Broadway) bridge in 1911 increasing the connectivity of Lincoln Heights to Downtown Los Angeles. The construction of the present building on the Project Site in 1924, an automobile dealership and repair shop, catered to the City's newest form of transportation, the automobile. Designed to catch the eye of motorists driving along North Broadway, the automobile dealership and repair shop located on the Project Site, was a new property type that emerged in the 1920s.

7 SurveyLA Los Angeles Citywide Historic Context Statement, Context: Commercial Development, 1850-1980, Theme: Commercial Development and the Automobile, 1910-1970. Prepared for the City of Los Angeles Department of city Planning Office of Historic Resources (August 2016): 5.

8. By 1910 Buena Vista Street, as well as Downey Avenue and Fort Street, were all consolidated under Broadway.

After the completion of the North Broadway Bridge, North Broadway was one of the principal routes to downtown and was frequently congested with traffic near the bridge.[9] The construction of the four Figueroa Street tunnels through Elysian Park between 1930 and 1936 alleviated the traffic along North Broadway and eased the connectivity between Los Angeles and Pasadena. Tunnel one, constructed between 1935 and 1936 and located to the north of the Project Site between Bishops Road and Solano Avenue, was the largest of the four tunnels constructed. With the opening of the Arroyo Seco Parkway in 1940, traffic at the tunnels was yet again a problem. To ease traffic congestion a new open-cut roadway carrying four lanes of southbound traffic through Elysian Park was built, and northbound lanes were routed through the tunnels. This work was completed in 1947. The construction of the four Figueroa tunnels and later the opening of the Arroyo Seco Parkway no doubt impacted the business at the Project Site due to the rerouting of traffic away from North Broadway.

After the Postwar period, the character of the neighborhood surrounding the Project Site continued to shift from residential to commercial uses and this trend is illustrated on Sanborn maps dated 1950 to 1970. While the Buena Vista Tract retained residential uses to west of North Broadway, commercial and multi-family residential uses along the west-side of North Broadway continued to intensify. The 1950 Sanborn Map shows the Project Site improved with the auto dealership and repair shop and an associated used auto sales lot located at the northwest corner of North Broadway and Bishop Road. The addition of used cars sales responded to the changing automobile sales market. To the immediate north of the Project Site on Lot 11 there was a two-story apartment building located in the spot of a former single-family residence. Other two-story apartment buildings were also constructed on the 1300 Block of North Broadway. At the northwest corner of North Broadway and Savoy, an industrial building used for coffee storage had replaced a single-family residence that was represented on the 1906 Sanborn map.

The greatest changes to the Project site and Vicinity occurred after Dodger Stadium was built in the early 1960s. Dodger Stadium was constructed between 1959 and 1962 on Chavez Ravine, north of the 110 and the Project Site.[10] The 1964 Sanborn Map shows Bishop Road was renamed to Stadium Way and was perhaps directly link North Broadway to the new stadium. During this period Lot 11, adjacent to the Project Site, a two-story apartment building was torn down sometime between 1960 and 1964 to make way for a parking lot associated with the auto dealership and repair shop on the Project Site. By the 1965 Sanborn map all of the single-family residences along the west-side of North Broadway were demolished and in their place were empty lots, commercial buildings, and multi-family residences. The 1965 and 1968 Sanborn maps reflect similar conditions to what was presented on the 1965 Sanborn map. The Project Site retained its associations with the automobile until 2004 when the automobile dealership and garage on was sold to Johnson Fain who adapted the building into an architectural office.

2.7.1 Car Showroom (1920-1970) Property Type[11]

Just before the First World War, purpose-built automobile dealerships began to appear within the existing pre-automobile streetscape. These early automobile dealerships were essentially storefronts located on a commercial street with a large entrance door and windows to display the product.12 As the popularity of the automobile gained in the 1920s, the automobile dealership retained their location on a central business district site along a busy commercial street adjacent to streetcar lines. These dealerships often exhibited historicist styles and began combining auto servicing and repair with sales.

During the 1920s there were two types of automobile dealerships. The first type included multi-storied buildings with façade detailing complete with ramps and auto-sized elevators for access to the upper stories. In Downtown Los Angeles several automobile manufacturers erected large, new showrooms and repair facilities along Figueroa and Flower Streets in what is now known as the South Park neighborhood, advertised in local newspapers as "auto row" to describe the cluster of showrooms and associated businesses in the area.13

The second type was a smaller dealership in outlying business districts, for instance the automobile dealership and repair shop constructed on the Project Site is an example of this type. These more suburban showrooms in local business districts continued the traditional pattern of being located against the street and were articulated in Period Revival styles. The primary elevation often consisted of an elaborate center entrance and symmetrically flanking show windows. These smaller showrooms were in essence single-story versions of the multi- story central business district dealerships, and maintained a footprint much like that of the earlier livery stable. Two excellent Spanish Colonial Revival style examples of this type constructed during the 1920s are the showroom located at1925 North Wilcox Avenue in Hollywood (Figure #), constructed in 1925, and the Chevrolet Company dealership at 1003 W Washington Boulevard (Figure #), constructed in 1927.[14]

11 The context below was adapted from SurveyLA Los Angeles Citywide Historic Context Statement, Context: Commercial Development, 1850-1980, Theme: Commercial Development and the Automobile, 1910-1970. Prepared for the City of Los Angeles Department of city Planning Office of Historic Resources (August 2016): 35 - 41

b. Former Spanish Colonial Style Dunn Chevrolet Company Dealership at 1003 W Washington Boulevard, Los Angeles (right)

By the mid-1930s, the auto showroom adopted the Streamline Moderne style in an attempt to attract customers during the Depression. Some of the older downtown showrooms replaced their historicist facades with sleek Streamline Moderne versions. More importantly during this period the location of the dealership was reconsidered. The majority of potential customers already owned cars, so there was no need to be close to streetcar lines and instead ease of automobile access and adequate parking were of the upmost necessity.15 Instead of being sited on a small lot in the central or local business district, the 1930s dealership sought to place itself on an arterial road that allowed it to spread horizontally. The common arrangement was a showroom in the front, complete with large expanses of glass, service bays to the rear, and adequate parking alongside for used cars and customer circulation. The showroom itself, with its expanses of glass, maintained its position directly on the street, without a setback. The exterior exhibited the Streamline Moderne style and featured the name and emblem of the brand sold within.[16]

In the Postwar era there were a number of stylistic variations of the automobile dealership, including the Mid-Century, Googie, and New Formalist styles. Dealerships constructed during the late1940s and early 1950s were typically subdued Mid-Century Modern designs, with flat roofs and plain surfaces with large glass windows. The Casa de Cadillac at 14401 Ventura Boulevard in Sherman Oaks (Figure #), constructed in 1949, is an excellent example from the early Postwar era and the Pollard Ravenscroft Chevrolet Dealership at 6001 Van Nuys Boulevard in Van Nuys (Figure #), constructed in 1964, is an example of a later Mid-Century style dealership.[17] While rare, the Googie style could occasionally be seen in an exaggerated roof line or a canopy extended over the service. Lastly, New Formalism, with its classicizing proportions and details, began to appear in the late 1950s and early 1960s. One of the most significant design and advertising innovations during this period was the separation of the sign from the structure. The dealership's primary identifying sign was detached from the building to become a free-standing, visually dominant sign.

After the mid-1960s the design and placement of auto showrooms underwent a major change in response to both growing conservatism and the changing nature of the automobile industry. The showrooms retreated from the road, behind a large parking lot where rows and rows of cars were displayed, and the showroom structure itself became less visible. This new method of selling required great amounts of space, as a result the existing dealerships were not large enough and dealerships moved to the outskirts of development where large lots were located. This was accompanied by a massive reduction in the number of dealerships as American-made brands disappeared and those few remaining consolidated facilities. The showroom and the service bay took on a utilitarian form and only the dealer sign, free standing and standardized for the brand, attracted attention.[18]

2.8 Construction and Occupancy History of 1201 N. Broadway

The building permits on file with the LADBS were reviewed to determine the history of construction and alterations of the former repair and auto dealership and repair shop building at 1201 N. Broadway. A summary of the building permits is provided in Table 1below.

The present building at 1201 N. Broadway is comprised of three improvements built in 1924, 1937, and 1946. Preparation for the initial construction required the relocation of two houses with the addresses of 1201 N Broadway and 1211 N Broadway, which were moved to 940 New Depot Street and 942 New Depot Street per permit records. Following the house relocation, a permit was issued on February 28, 1924 for construction of a one-story building including a garage and two-room showroom measuring 80 by 140 feet on lots 7 and 8. The 16 foot high building was to have cement floors and be constructed by Pozzo Construction Company at a valuation of $17,000 for Domenich Basso who would remain listed as owner until 1969. In 1927, another residence on an adjacent site (Lot 9), at 1209 North Broadway, was also relocated to 440 Savoy Street within the same tract most likely to create a parking lot for the auto dealership and repair shop. Presented in Figure # below is an aerial map from 1928 that shows the footprint of the auto dealership and repair shop along with the adjacent vacant lot.

a. 1928 Aerial Showing the Auto Dealership and Repair Shop (Outlined in Red) and Adjacent Parking Lot (left)

b. 1938 Aerial Showing the Auto Dealership and Repair Shop (Outlined in Red), Adjacent Parking Lot, and Corner Used Car Lot (right)

In 1931 three minor alterations were made to the building. In June, two projects were permitted with Pozzo Construction: the first included the construction of a parts department measuring 12 x 20 feet and second included the addition of two 6 x 9 feet offices. Both improvements were valued at $5,000. The third improvement included a mezzanine built over the new parts department and offices measuring 13 x 38 feet valued at $100. In November of that year, a roof sign was added by Q.R.S. Electric Sign Company for an estimated $248.

In 1936, the house on the adjacent property at 1215 N. Broadway was moved to 215 Devonshire Street, allowing the building to continue to grow to the east. The vacant lot adjacent to the subject building is shown on the 1938 aerial presented in Figure #. One year later, a building permit was filed in November 1937 for a rear addition (50 x 80 feet) onto the existing garage by Row Construction Company and architect Armand Monaco valued at $6,300. This expansion had a concrete foundation and floors, brick exterior wall, reinforced concrete framework, and a composition roof.

The last major addition to the building was added in February 1946, again with Pozzo Construction and architect Armand Monaco using engineer Hillman and Nowell. The new garage building was to measure 83’6” x 139’6” with no construction cost noted. This is most likely when the look of the primary façade was updated to the Mid-Century Modern style. Modifications were made to the existing adjacent building so that ceilings in the new and older structure could align: The wood lath and plaster ceiling in the existing showroom was removed and a new plasterboard and plaster ceiling was installed to match the new ceiling, a change affecting an area measuring 25 x 58 feet and 12 x 16 feet for a total of square

footage of 1,816. The subject building, with the addition on the northeast elevation, is shown on the 1952 aerial presented in Figure #.

In 1947, a horizontal neon sign was installed by Guarantee Neon Company for $261. A sign was again installed in 1959 by Neon Products Signs for $208. This was a projecting sign (3 x 6 feet) on the Auto Sales Room. In 1961 Neon Products Signs installed a sign on the Car Agency Building.

b. 1964 Aerial Showing the Auto Dealership and Repair Shop, Adjacent Parking Lot, and Corner Used Car Lot (right)

Between June 1961 and 1989, a number of small revisions and repairs were made to the building which continued to serve as an automobile dealership and service facility owned by Domenich Basso or his company. In June 1961 Pozzo Construction carried out unidentified work to comply with building requirements for $1,100; in September 1961 Pozzo Construction repaired the parapet adjacent to Broadway and Bishop Street on the north side of the building for $1,500. In April 1962 an addition to the roof structure was made by George J. Fosdyke as engineer for $1,800. In June 1962 with contractor Heath and Company and engineer James A. Lynch, 257 square feet of illuminated signs were added. In 1965, two permits were issued: in February Pozzo Construction with E. Aillman engineer installed air conditioning equipment on the roof for $3,000 and in June Advance Neon Sign installed a wall sign for $2,160. In January 1969, interior partitions were installed by Edward M. Pozzo Company for $1,000. In November 1988, construction to achieve full compliance with Divison 88 seismic requirements was permitted with Edward M. Pozzo as contractor and Dennis S. Wish as engineer for $80,000. In this year, ownership changed to Alberta Boccalero and Alma Connolly, Basso's daughters. In 1989, Randol Roofing re-roofed the north half of the showroom with triple-ply fiberglass roofing.

No additional changes were made to the building until 2004 when the building was under the ownership of Johnson Fain. Existing condition photographs of the automobile dealership and repair shop circa 2000,

prior to Johnson Fain's purchase, are included in Figure # to #. Per permits in January and March, the building changed use from paint storage and garage to an architectural office. Under Johnson Fain's ownership, Minardos Construction with Nabih Youssef and Fouad Guirg engineers carried out the $538,000 structural retrofit that added beams and columns for support of the existing mezzanine, added new roof equipment, and changed elevation finishes. In 2007, a permit was issued for a $75,000 interior remodel with Intro Construction Company and architect Larry Roy Ball. Under this scope of work the alterations included the construction of partitions for storage and offices, as well as the construction of equipment rooms without removing any structural walls.

11/4/1937	1937LA36386	1 & 2	Dominch Basso	Row Construction Co	Armand Monaco (architect)	$6,300	Addition (50' by 80') onto existing garage. Concrete foundation, brick exterior wall, reinforced concrete framework, concrete floors, composition roof
11/8/1937	1937LA36789		Dominch Basso	Row Construction Co	Armand Monaco (architect)	$50	Change in design of footing on west wall
2/6/1946	1946LA03456		Dominch Basso	Pozzo Construction	Armand Monaco (architect)	$3,000	Foundation for addition
3/4/1946	1946LA05868	9 & 10					Addition of garage building (83-6" x 139'6")
11/1/1946	1946LA30738		Domenich Basso	Pozzo Construction Co	Arman Monaco (architect); Hillman & Nowell (engineer)	$800	Remove existing wood lath & plaster ceiling in present showroom partition and install new plasterboard & plaster ceiling to line up with new ceiling in adjacent new addition (area 25'x58' and 12' x 16' for a total of 1,816 sq ft)
10/20/1947	1947LA33076		Domenich Basso	Guarantee Neon Co	None	$261	Install a Simple Face Horizontal Neon Sign
12/22/1959	1959LA49991		Domenich Basso	Neon Products Signs		$208	Projecting Sign 3' x 6' on Auto Sales Room
2/23/1961	1961LA81905		Domenich Basso Inc.	Neon Product Signs			Sign Installation on Car Agency Building
6/27/1961	1961LA91746	1, 2, 7, 8, 9 & 10	Domenich Basso	Pozzo		$1,100	To comply with building requirements on file
9/8/1961	1961LA97029	1, 2, 7, 8, 9 & 10	Domenick Basso	Edward W. Pozzo Co		$1,500	Repair parapet adj to Broadway & Bishop & north side of building
4/30/1962	1962LA09634	7, 8, 9 & 10	Domenich Basso Inc.	Owner	Geo J. Fosdyke (engineer)	$1,800	Rood structure addition
6/15/1962	1962LA13187	7, 8, 9 & 10	Domenich Basso Inc.	Heath & Co	James A. Lynch (engineer)		Revise engineering on Auto Dealer sales and service
1/11/1965	1965LA85581	7	Domenich Basso Inc.	Advance Neon	B.L. Prenovich (engineer)	$3,500	257 sf DF Illuminated Signs

Date	Permit Number	Lot	Owner	Contractor	Architect/ Engineer	Valuation	Description
2/25/1965	1965LA89171	8	Don Basso	Edward M. Pozzo Co	E Aillman (engineer)	$3,000	Install air conditioning equipment on roof
6/8/1965	1965LA96945	7	Domenich Basso	Advance Neon Sign Co	None	$2,160	Install s/f wall signs
1/6/1969	1969LA80516	8	Domenich Basso	Edward M. Pozzo Co	None	$1,000	Interior partitions
11/15/1988	1988LA16588	1, 2, 7, 8, 9 & 10	Alberta Boccalero and Alma Connolly	Edward M Pozzo Co	Dennis S Wish (engineer)	$80,000	Full compliance with Div 88
7/3/1989	1989LA36506	7	Domenick Basso, Inc.	Randol Roofing	None	$3,920	Re-roof north half od showroom with 3 Ply fiberglass roofing. 44 sq class A Roof
1/6/2004	03016-10000-20878	7	Alberta Boccalero and Joe C Trs A and JC	Minardos Construct and Associates	Nabih Youssef Fouad Guirg (engineer(	$538,000	Change of use from paint storage/garage to office. Add beams and columns for support of existing mezzanine and new roof equipment.
3/19/2004	03016-10002-20878	7	Alberta Boccalero and Joe C Trs A and JC	Minardos Construct and Associates	Nabih Youssef Fouad Guirg (engineer)	$301	Supplement Permit of 03016-10000-20878 to change east elevation finishings (no structural work)
4/20/2007	07016-10000-02136	7	1201 Broadway, LLC	Intro-Construction Company	Larry Roy Ball (architect)	$75,000	Interior Remodel within current building. Add partitions for storage, file computer and equipment rooms. No structure walls to be removed.

2.9 Domenich Basso (1891-1963)

Domenich Basso was a pioneering member of the Los Angeles automotive community. Born in Italy in 1891, he immigrated to Los Angeles in 1907 at the age of 15. Interested in the emerging automobile, he started working at 17 in the sales and service departments of local auto dealerships, first with Walter Wail who represented the Pennsylvania car and then with Rand & Chandler who represented the Alco car built by the American Locomotive Company. He briefly served as the personal chauffeur to General Harrison Grey Otis, publisher of the *Los Angeles Times*.[19]

At this period, the industry sponsored automobile races and rallies as a marketing strategy, the participants in and winners of races publicized by full page newspaper advertisements.[20] Basso

19 Lynn Rogers, "Automotive Highlights," *Los Angeles Times* (August 15, 1954).

20 Lynn Rogers, "Automotive Highlights," *Los Angeles Times* (August 17, 1958).

participated in numerous historic races as both a driver and mechanic, including the 1913 Los Angeles-Sacramento race; the 1914 Vanderbilt Cup Race in which he rode as a mechanic for Eddie Rickenbacker; and he raced throughout the country with Teddy Tetzlaff with whom he set a world speed record of 142.8 mph on the salt beds at Bonneville Flats in Utah, also in 1914. Subsequently injured in a wreck, he worked with Tetzlaff to develop the MILAC, a car manufactured in Los Angeles, which was driven in the 1916 Corona road race.[21]

In 1916, Basso opened an automobile service garage on North Broadway where, by 1918, he had a contract to service Chevrolet cars. It appears as an Italian immigrant, Basso established his dealership in an Italian neighborhood of Los Angeles and also according to the 1920, 1930 and 1940 U.S. Census records he lived nearby at 505 Solano Avenue. In 1924 he built and opened his own garage and showroom nearby at 1201 North Broadway handling Hudson and Paige + Jewett motorcars.[22] He became a Chevrolet dealer in 1927 and by 1932 he was a Chrysler dealer specializing in the company's De Soto and Plymouth lines (Figure #).[23] After Mr. Basso's death in 1963, his family continued to own and manage the family business and began to also sell Chrysler automobiles. A 1966 article in the *Los Angeles Times* noted that Domenich Basso's Chrysler-Plymouth dealership was one of the largest in the western United States with 38 employees, modern facilities, and the ability to store the majority of its stock indoors. To address the changing demographics of Downtown Los Angeles, the company diversified its sales model to include fleet services to the center city businesses that had replaced residents.[24] By 1979, the Basso dealership was the only Chrysler dealer left in Los Angeles, as Chrysler suffered from the corporation's near bankruptcy and the nationwide gasoline shortage.[25] The company continued until at least 1987 when in was listed in the Los Angeles City Directory as Domenich Basso Inc., Chrysler-Plymouth.

Basso was named Citizen of the Year by the Los Angeles City Council in 1958. He died in 1963 one year following the death of his wife Santina Basso.[26] Basso was married twice and had two daughters;[27] their husbands continued as the owners and managers of the dealership after his death.

2.10 The Pozzo Construction Company

The Pozzo Construction Company was responsible for constructing the initial 1924 automobile dealership and repair shop on the Project Site, as well as many subsequent alterations and additions to the building. The Pozzo Construction Company is an Italian American, four generation, family run business responsible for constructing many of significant buildings in Southern California. The company was founded by Pietro Eusebio Pozzo who left his home country of Italy and arrived at Ellis Island in 1880 where he would establish P. E. Pozzo & Sons in New York. In the beginning he constructed small post office and train station structures. In 1898, Pietro Pozzo along with his three sons moved to California, the 'New Italy,' in 1898 where they would again establish their own construction firm. Within the next 15 years, they would construct 314 buildings in Los Angeles, among the most notable include the French Hospital and Italian Hall (Garibaldi Hall). The firm would continue to build and work with such famous architects as Claude Beelman, Charles Luckman, A. C. Martin, William Pereira, George G. Adams, Gene Verge Sr., Douglas Honnold, Morgan, Walls & Clements, as well as John W. Maloney of Seattle. The more notable buildings amongst their collection include Shriners Hospital for Crippled Children in Los Angeles, the major addition to Hollywood Presbyterian Medical Center, the later construction stages of St. Mary's Medical Center, the majority of the California Federal Savings & Loan buildings, Lockheed Corporate headquarters in Calabasas, Avery International World Headquarters in Pasadena, the Braille Institute of America in Los Angeles and Union Oil Research Center in Brea. Pozzo Construction Company continues to operate today.[28]

3. Regulatory Framework

3.1 State

The State implements the National Historic Preservation Act (NHPA) through its statewide comprehensive cultural resources surveys and preservation programs. The California Office of Historic Preservation (OHP), as an office of the California Department of Parks and Recreation, implements the policies of the NHPA on a statewide level. The OHP also maintains the California Historic Resources Inventory. The State Historic Preservation Officer is an appointed official who implements historic preservation programs within the State's jurisdictions.

3.1.1 California Register of Historical Resources

The California Register of Historical Resources (California Register) is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1[a]). The criteria for eligibility for the California Register are based upon National Register criteria (PRC Section 5024.1[b]). Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register.

To be eligible for the California Register, a prehistoric or historical-period property must be significant at the local, State, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and
- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historical resources contributing to historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

3.2 AB-52

Assembly Bill 52

Assembly Bill (AB) 52 (Chapter 532, Statutes of 2014) requires lead agencies to consider the effects of projects on tribal cultural resources and to conduct consultation with federally and non-federally recognized Native American Tribes early in the environmental planning process. AB 52 applies specifically to projects for which a Notice of Preparation (NOP) or a Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration (MND) wasfiled on or after July 1, 2015.

The goal of AB 52 is to include California Tribes in determining whether a project may result in a significant impact to tribal cultural resources that may be undocumented or known only to the Tribe and its members. This bill specifies that a project that may cause a substantial adverse change in the significance of a tribal cultural resource (sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe) is a project that may have a significant effect on the environment. AB 52 defines tribal cultural resources as “sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe” that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources (PRC § 21074 (a)(1)).

AB 52 requires that prior to determining whether a Negative Declaration, MND, or Environmental Impact Report (EIR) is prepared for a project, the lead agency must consult with California Native American Tribes, defined as those identified on the contact list maintained by the California Native American Heritage Commission (NAHC), who are traditionally and culturally affiliated with the geographic area of the proposed project, and who have requested such consultation in writing. The following is what the scope of consultation may include according to PRC §21080.3.2(a):

- The type of environmental review necessary
- The significance of tribal cultural resources
- The significance of the project’s impacts on the tribal cultural resources
- Project alternatives or the appropriate measures for preservation
- Recommended mitigation measures

AB 52 outlines the required procedures concerning consultation (PRC §21080.3.1(d) and (e)) including the initiation and conclusion of consultation. Consultation should be initiated by a lead agency within 14 days of determining that an application for a project is complete or that a decision by a public agency to undertake a project. The lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American Tribes that have requested notice. At the very least the notice should consist of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American Tribe has 30 days to request consultation pursuant to this section. The lead agency shall begin the consultation process within 30 days of receiving a California Native American Tribe's request for consultation. According to PRC §21080.3.2(b), consultation is considered concluded when either the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource, or a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.

3.3 California Health and Safety Code Section 7050.5

California Health and Safety Code Section 7050.5 requires that in the event human remains are discovered, the County Coroner be contacted to determine the nature of the remains. In the event the remains are determined to be Native American in origin, the Coroner is required to contact the NAHC within 24 hours to relinquish jurisdiction.

3.4 California Public Resources Code Section 5097.98

California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during Project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the NAHC, upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods.

In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the land owner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

3.5 Local

3.5.1 City of Los Angeles General Plan

The City of Los Angeles General Plan (adopted 2001) states as its objective, to "protect the city's archaeological and paleontological resources for historical, cultural, research, and/or educational purposes" by continuing "to identify and protect significant archaeological and paleontological resources

known to exist or that are identified during land development, demolition, or property modification activities."

In addition, the City will:

> *continue to protect historic and cultural sites and/or resources potentially affected by proposed land development, demolition, or property modification activities…The city's environmental guidelines require the applicant to secure services of a bona fide archaeologist to monitor excavations or other subsurface activities associated with a development project in which all or a portion is deemed to be of archaeological significance. Discovery of archaeological materials may temporarily halt the project until the site has been assessed, potential impacts evaluated and, if deemed appropriate, the resources protected, documented and/or removed (City of Los Angeles, 2001).*

In addition to the National Register and the California Register, three additional types of historic designations may apply at a local level:

1. Historic-Cultural Monument
2. Designation by the Community Redevelopment Agency as being of cultural or historical significance within a designated redevelopment area
3. Classification by the City Council as an Historic Preservation Overlay Zone

The City of Los Angeles Cultural Heritage Ordinance states that a Historic-Cultural Monument designation is reserved for those resources that have a special aesthetic, architectural, or engineering interest or value of a historic nature and meet one of the following criteria (City of Los Angeles Department of City Planning, 2009). A historical or cultural monument is any site, building, or structure of particular historical or cultural significance to the City of Los Angeles, such as historic structures or sites:

- in which the broad cultural, political, economic, or social history of the nation, state, or community is reflected or exemplified; or
- which are identified with historic personages or with important events in the main currents of national, state, or local history; or
- which embody the distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period, style, or method of construction; or
- which are a notable work of a master builder, designer, or architect whose individual genius influenced his or her age.

In addition, the Los Angeles Municipal Code (LAMC) Section 91.106.4.5 states that the Building Department "shall not issue a permit to demolish, alter or remove a building or structure of historical, archaeological or architectural consequence if such building or structure has been officially designated" by a federal, state, or local authority.

3.5.2 Los Angeles Historic Preservation Overlay Zone (HPOZ) Criteria for Designation

City of Los Angeles Ordinance Number 175891, found in Section 12.20.3 of the Los Angeles Municipal Code, describes the procedures for creation of new HPOZs, the powers and duties of HPOZ Boards, and the review processes for projects within HPOZs. The Ordinance was amended by the Los Angeles City Council on March 19, 2004, and became effective on May 12, 2004.[29] An HPOZ is an area of the City which is designated as containing structures, landscaping, natural features or sites having historic, architectural, cultural or aesthetic significance. Before an HPOZ may move into the formal adoption process, an historic resources survey of the proposed district must be completed. The survey studies the historic and architectural significance of the neighborhood and identifies structures and features as either "contributing" or "non-contributing" to the district. A contributing structure is a building that was constructed during the predominant period of development in the neighborhood and that has retained most of its historic features. A non-contributing structure is one that was either constructed after the major period of the neighborhood's development, or has been so significantly altered that it no longer conveys its historic character.[30]

According to Section 12.20.3 of the City of Los Angeles Municipal Code, features designated as contributing shall meet one or more of the following criteria:

- Adds to the Historic architectural qualities or Historic associations for which a property is significant because it was present during the period of significance, and possesses Historic integrity reflecting its character at that time; or
- Owing to its unique location or singular physical characteristics, represents an established feature of the neighborhood, community or city; or
- Retaining the building, structure, Landscaping, or Natural Feature, would contribute to the preservation and protection of the resource and its environment.[31]

3.5.3 SurveyLA Registration Requirements and Eligibility Standards

SurveyLA is a citywide survey that identifies and documents significant historic resources representing important themes in the City's history. The survey and resource evaluations are completed by consultant teams under contract to the City of Los Angeles and the supervision of the OHR. The program is managed by the OHR, which maintains a website for SurveyLA.[32] The field surveys cover the period from approximately 1850 to 1980 and include individual resources such as buildings, structures, objects, natural features and cultral landscapes as well as areas and districts (archaeological resources will be included in a future survey phase). Significant resources reflect important themes in the City's growth and development in various areas including architecture, city planning, social history, ethnic heritage, politics, industry, transportation, commerce, entertainment, and others. Field surveys started in 2010 and are

31 "Citywide HPOZ Ordinance," City of Los Angeles Historic Resources, http://www.preservation.lacity.org/hpoz/citywide-hpoz-ordinance, accessed July 24, 2013, pgs. 11-12.

32 SurveyLA: Los Angeles Historic Resources Survey, http://preservation.lacity.org/survey, accessed January 5, 2017.

completed in three phases by Community Plan Area. All tools and methods developed for SurveyLA meet state and federal professional standards for survey work.

Los Angeles' citywide Historic Context Statement (HCS) is designed for use by SurveyLA field surveyors and by all agencies, organizations, and professionals completing historic resources surveys in the city of Los Angeles. The context statement is organized using the Multiple Property Documentation (MPD) format developed by the National Park Service (NPS) for use in nominating properties related by theme to the National Register. This format provides a consistent framework for evaluating historic resources. It has been adapted for local use to evaluate the eligibility of properties for city, state, and federal designation programs and to facilitate environmental review processes.[33] The HCS uses Eligibility Standards to identify the character defining, associative features, and integrity aspects a property should retain to be a significant example of a type within a defined theme. Eligibility Standards also indicate the general geographic location, area of significance, applicable criteria, and period of significance associated with that type. These Eligibility Standards are guidelines based on knowledge of known significant examples of property types; properties do not need to meet all of them in order to be eligible. Moreover, there are many variables to consider in assessing integrity depending on why a resource is significant.

4. Methods

4.1 Archival Research

4.1.1. Records Search

On December 7, 2016, a cultural resources records search was conducted at the California Historical Resources Information System – South Central Coastal Information Center (CHRIS-SCCIC) housed at California State University, Fullerton. The records search included a review of all recorded archaeological resources within a one-half mile radius of the project as well as a review of cultural resource reports and historic topographic maps on file. In addition, ESA reviewed the California Points of Historical Interest, the California Historical Landmarks, the California Register of Historical Resources, the National Register of Historic Places, the California State Historic Resources Inventory, SurveyLA, and HistoricPlacesLA.org listings and databases. The purpose of the record search was to determine whether or not there are previously recorded archaeological and/or historic architectural resources were located within the Project site and surrounding vicinity.

4.1.2 Sacred Lands File Search

On December 1, 2016, ESA commissioned a SLF search through the NAHC. The letter included information such as project location and a brief description of the proposed project. The purpose of the search was to obtain information regarding the nature and location of additional prehistoric or Native American resources whose records may not be available at the SCCIC.

[33] Guide for Professionals Using the Historic Context Statement for Property Evaluations, http://preservation.lacity.org/sites/default/files/Guide%20for%20Professionals%20Using%20the%20Historic%20Context%20Statement_Jan%202016_0.pdf, accessed January 5, 2017.

4.1.3 Historic Map,Photo and General Archival Research

On January 4, 2017, ESA requested a data search through EDR which included any Sanborn Fire Insurance Maps, historic topographic maps, historic aerial photographs, and city directories associated with the Project vicinity. Cultural resource staff reviewed the Sanborn Fire Insurance Maps to understand the land use history of the Project site in order to supplement the historic context of the Project site, to aid in the evaluation of the built environment, and to assess the archaeological sensitivity of the Project site. ESA conducted other general archival research on the property utilizing building permits, City directories, historical photographs, University of Southern California (USC) Digital Collections, Los Angeles Public Library (LAPL) photo collection, historical Los Angeles Times, LAPL California Index, Los Angeles County Assessor, and other published sources. ESA conducted research at the City of Los Angeles Department of Building (LADBS) and the LAPL. Additionally, ESA contacted the following organizations and libraries for information about the Old Calvary Cemetery: Seaver Center in the Natural History Museum, Los Angeles City Archives, the Archival Center at the San Fernando Mission, Catholic Cemeteries, Map Department at LAPL, and the Huntington Library.

4.1.4 Report Review

On December 14, 2016, ESA reviewed the Phase I Environmental Site Assessment and the Geotechnical Hazards Report in order to supplement the information on the soils and depth of fill to aid in assessing archaeological sensitivity of the Project site.

4.2 Site Survey

On November 17, 2016, Amanda Kainer and Chris Taylor of ESA conducted an intensive-level site survey to to document the existing conditions of the Project Site built environment and surrounding vicinity. Detailed notes and digital photographs were taken from both inside and outside of the buidling. The survey work utilized the survey methodology of the State OHP.

Due to the development of the majority of the Project site and limited access to the more undeveloped areas becaue these areas are associated with private homes, a survey for archaeological resources was not conducted.

5. Results

5.1 Cultural Resources Records Search

Results of the cultural resources records search indicated that a total of 27 cultural resource studies have been previously conducted within a one-half mile radius of the Project site. Of these 27 studies, only one (Hatheway 1982) has previously encompassed the Project site. However, this study was conducted as part of a comprehensive architectural/historical survey program and not as part of an archaeological assessment. In addition, two studies (Messick et al. 2003; Keck 2005) have been conducted within close proximity to the Project site. These studies consisted of a General Plan and Final Environmental Impact Report for the Los Angeles State Historic Park (LASHP) and an archaeological monitoring report for the Historic Cornfield Railroad Yard, which are located south of the Project site. These studies have indicated that recent archaeological excavations during the construction of the Gold Line commuter railroad and the environmental remediation of LASHP have identified and documented archaeological remains of

structures associated with the Los Angeles Cultural Landmark #82 (known as the River Station/Southern Pacific Railroad site).

ESA also reviewed the *Historical Context, Archaeological Research Design, and Mitigation Monitoring and Discovery Plan for the River Station* report (Stringer-Bowsher 2014). This report indicated that a total of 11 studies (including Messick et al. 2003 and Keck 2005 which were mentioned above) have been conducted within the LAHSP consisting of pedestrian surveys, archaeological test excavations, contaminated soil remediation work, geophysical surveys, and archaeological monitoring which yielded the recordation of several resources within the LASHP. The report also mentioned that the majority of these studies have not yet been submitted to the SCCIC.

A total of 12 historic archaeological resources have been recorded within the one-half mile radius of the Project site. Out of these 12 resources, six (P-19-003100/CA-LAN-3100, P-19-003101/CA-LAN-3101, P-19-003102/CA-LAN-3102, P-19-003120/CA-LAN-3120, P-19-3650, P-19-190309) are located within close proximity to the Project Site and these are described in detailed below. The remaining six resources (P-19-002828/CA-LAN-2828, P-19-003103/ CA-LAN-3103, P-19-004182/ CA-LAN-4182H, P-19-004183/ CA-LAN-4183H, P-19-004601/ CA-LAN-4601H, P-19-100881) which are located farther away from the Project site, but within the one-half mile radius are summarized in Table 3.Project site

5.1.1 P-19-003100/CA-LAN-3100

This resource has been described as a historic artifact scatter (composed of six fragments of white ceramic glazed dishware, one fragment of olive bottle glass, one clear container glass fragment and one milk glass container fragment) located in the “Cornfield” area that was historically occupied by a railroad switchyard. This resource is listed as the City of Los Angeles Cultural Monument #82 “River Station Area/Southern Pacific Railroad”. The resource was recorded in 2002 during grading activities and its dimensions have been reported to measure six meters in length by four meters in width. The artifacts recovered have been described as possibly being associated with the Southern Pacific Railroad Company’s River Station Pacific Depot and Hotel and ancillary structures from the late 1800s and early 1900s (Wesson 2002a). Based on a review of Google Earth aerial imagery, this resource is also located across and approximately 1000 feet northeast of the Project Site and within the LASHP boundaries.

P-19-003101/CA-LAN-3101

This resource has been described as a historic artifact scatter (made up of porcelain, brick fragments, metal fragments, glass fragments, charcoal and ceramics) located in the “Cornfield” area and possibly associated with Southern Pacific Railroad Company’s River Station Pacific Depot and Hotel. This resource was recorded in 2002 during grading activities and its dimensions have been recorded as measuring 10 meters in length by 15 meters in width. This resource is listed as the City of Los Angeles Cultural Monument #82 “River Station Area/Southern Pacific Railroad” (Wesson 2002b). Based on a review of Google Earth aerial imagery, this resource is also located approximately 1700 feet northeast of the Project Site and within the LASHP boundaries.

P-19-003102/CA-LAN-3102

This resource has been described as a brick wall/foundation and historic artifact concentration that was exposed during grading for the Pasadena Gold Line. Approximately four meters of the wall was exposed with red bricks and mortar in a cut bank. Artifacts associated with the brick wall/foundation include glass and ceramic fragments and one amethyst bottle glass fragment (Wessson 2002c). Based on a review of Google Earth aerial imagery, this resource is also located approximately 100 feet east of the Project Site and within the LASHP boundaries.

P-19-003120/CA-LAN-3120

This resource has been described as the "buried remains of the 19th century River Station, a railroad maintenance facility, freight and passenger depot, and rail yard operated by Southern Pacific". The resource is commonly known as the Cornfield/River Station and is listed as the City of Los Angeles Historic Cultural Monument #82 and State Landmark 655. The resource is 32 acres in size and encompasses most of the LASHP's boundaries. Several excavations have been conducted at the site of the River Station and known features include "brick-and-mortar wall foundations, brick foundations for repair pits within the Roundhouse site, brick foundations within the Machine Shop site, square shaped brick support piers inside building sites, a substantial intact wood structural foundation for the River Station turntable, a solid two-foot thick, dressed granite pedestal that served as the turntable center, utility pipes, several eight-foot square concrete support piers…and other cultural remains". The artifact collections consist mainly of metal objects consisting of machine parts, nails, nuts and bolts, spikes, tools, pipes, railroad ties, coal, bricks, and residue from forges. The resource has been interpreted as having played a significant role in the commercial and demographic growth of Los Angeles and the greater Los Angeles region where Los Angeles became a "financial power in the state of California and the West". At the same time, the population of Los Angeles increased during the operation of the River Station. The River Station also became the center for shipment from the citrus industry in Southern California to other parts of the country. The resource is eligible for inclusion of the NRHP (Messick 2003; Sampson and Garrett 2010).

P-19-3650

This resource consists of a collection of Bovinae skull fragments found within the slope of fill from the grading of Broadway Road (Moore 2005).

P-19-190309

This resource consists of a segment of the Zanja Madre, also known as the "Mother Ditch" and which operated as an early water conveyance system (conduit brick pipe). The Zanja Madre was constructed sometime between 1884 and 1888 for irrigation needs of the City of Los Angeles. This specific segment was made of red fire bricks laid in mortar and measures 75 feet long by three feet in diameter. The segment was unearthed in 2005 during grading for an access road and fiber optic cable on the Los Angeles County Metropolitan property. In 2008, this segment of the Zanja Madre was nominated for the NRHP (Taniguchi 2008).

TABLE 3
ARCHAEOLOGICAL RESOURCES LOCATED WITHIN THE ONE-HALF MILE RADIUS OF THE PROJECT SITE

Permanent No. (P-19-)	Trinomial (CA-LAN-)	Description	Date Recorded
19-002828	CA-LAN-2828	Historic archaeological site consisting of a buried scatter containing ceramics, glass, bones, metal, shellfish, coal, bricks, and roofing tile.	2000
19-003103	CA-LAN-3103	Historic archaeological site consisting of a segment of the Zanja Madre (a water conveyance system) .	2002
19-004182	CA-LAN-4182H	Historic archaeological site consisting of a single alignment of railroad ties.	2011
19-004183	CA-LAN-4183H	Historic archaeological site consisting of granite paving stones.	2011
19-004601	CA-LAN-4601H	Historic archaeological site contains 26 features including the Zanja Madre Conduit and its associated builders trench. The features consist of building foundations and refuse clusters. In addition, more than 2,000 artifacts were recovered during monitoring. The site reflects the intensive urban use from the past 145 years, at least since 1870.	2014
19-100881	N/A	Historic archaeological isolate consisting of one metal fastener and two historic building materials found construction monitoring for a fiber optics cable trench.	2009

5.2 Known Historic Architectural Resources in the Project Vicinity

Located within a dense, urban setting, with limited visibility, the archival records search included a review orf previously recorded historic architectural resources within a quarter-mile of the Project which may have views of the Project Site for the purpose of analyzing potential indirect impacts to such resources. The search included the National Register, California Register, HRI, SurveyLA, HCM, and HistoricPlacesLA.org listings to find previously identified historical resources within the radius. As a result, ESA identified six previously surveyed historic architectural resources within a quarter-mile radius of the Project Site and two California Historical Landmarks outside of the quarter-mile radius. These eight historical resources are summarized below in Table 4. Furthermore, out of these eight resources, two (P-19-175256 and P-19-170956) are located within close proximity to the Project Site and would have direct and indirect views of the Project Site. These two historic architectural resources are described in detail below. The remaining six historic architectural resources would not have direct or indirect views of the Project Site as they are located at a distance of 0.16 miles (838 feet) to 0.45 miles (2,400 feet) away from the Project Site and are not considered further in this assessment.

5.2.1 P-19-175256

The Renaissance Revival style Cathedral High School was constructed in 1925 and the architecture firm of record is Barker and Ott. Other construction dates listed on the form include 1931 and 1960. In the fall of 1925, the school was founded by Archbishop John J. Cantwell as the first Los Angeles Archdiocesan high school for boys. The school was designated as HCM No. 281 on August 7, 1984. Also, the school

was determined eligible for the National Register by consensus through the Section 106 process and listed in the California Register on September 30, 1994. The historic core of Cathedral High School is located to the northwest of the Project Site and would have direct views of the Projects Site.

5.2.2 P-19-170956

The Charles B. Wellman Residence, constructed in 1894, is located at 437 Savoy Place. The two-story residence was determined eligible for the National Register by consensus through the Section 106 process and listed in the California Register on August 12, 1996. The Queen Anne style residence was recommended eligible as a stylistic and representative example of early residential architecture in Los Angeles. 437 Savoy Place is located on the residential street behind the Project Site and would have an indirect view of the Project

5.3 Previous Evaluations of the Project Site

No part of the Project Site has been previously been subject to historic architectural evaluated. The Project Site is located with the Central City North CPA for which the SurveyLA results have not yet been released by the City. The Project Site is not listed in the HRI for the City of Los Angeles. Finally, The Project Site is listed in the National or California Registers, or designated as an HCM.

5.4 Sacred Lands File Search

The NAHC SLF records search results (received December 2, 2016) revealed no resources from the NAHC archives within the Project site. However, the NAHC mentioned that the area is sensitive for cultural resources.

5.5 Sanborn Fire Insurance Maps

Review of the 1894 and 1906 Sanborn Maps indicated that five residential dwellings once existed within the Project site. Review of the 1950 and 1960 Sanborn Maps depict an automotive complex (consisting of painting, sales and service) at the Project site. In addition, two residential dwellings also existed within the northeastern portion of the Project site. Review of the 1964, 1966, 1968 and 1970 Sanborn Maps indicate that the automotive complex still exists along with a parking lot located on the northeastern portion of the Project site.

5.6 Report Review

According to the Phase I Environmental Site Assessment (ESA), two Underground Storage Tanks (USTs) are known to have existed at the Project site. One of the USTs was located beneath the sidewalk along North Broadway (in front of the sales showroom) and the other one was located inside the service shop. However, these USTs were removed from the Project site in 1991 and 1993. The Phase I ESA also mentions that a rectangular depressed area is located in the parking lot. Although the cause of this depression is unknown, it has been suggested that this depression may be related to the removal of one of the USTs (Ninyo & Moore 2003).

According to the Geotechnical Hazards Report (and based on a previous engineering investigation on properties located to the east and west of the Project site), fill soils within the Project site are**Los Angeles**

Historic Cultural Monument Criterion: The proposed site, building, or structure reflects or exemplifies the broad cultural, political, economic, or social history of the nation, state, or City (community).

EXECUTIVE SUMMARY

Arcadis U.S., Inc. (Arcadis) was retained by McCourt Group LLC (McCourt) to conduct a Phase I Environmental Site Assessment (ESA) of the properties located at 1201-1217 N. Broadway and 430 and 430 ½ Savoy Street in Los Angeles, Los Angeles County, California (the Site). The Site is proposed to be redeveloped with a transportation use or residential use.

As directed by McCourt, the Phase I ESA was performed in accordance with the ASTM International (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process*. The goal of the Phase I ESA was to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and historical recognized environmental conditions (HRECs) associated with the property in conformance with ASTM E1527-13.

The Phase I ESA included a visual inspection of the property completed on January 3, 2019; observation of adjacent properties; reviews of environmental regulatory agency records, historical documents, and facility records that were available on site; and interviews with personnel represented to be familiar with the Site as indicated elsewhere in the report.

The findings identified by Arcadis are summarized below and discussed in greater detail in the body of the report.

Historical Findings

Based on review of historical sources, the Site was developed residentially in the 1890s. Most of the residences were removed in 1924 for the development of the Domenich Basso automobile dealership. Additions to the original dealership building occurred in the 1930s and 1940s. Residential properties were removed in 1963 for the existing east parking lot. The Domenich Basso automobile dealership continued to operate until 2003 when the buildings were renovated for the existing commercial use. The architectural firm of Johnson Fain has occupied the 1201-1217 N. Broadway building since 2003.

The 430-430 ½ Savoy Street address was developed with a residential dwelling in the 1890s. The original structure was replaced with the existing structure in 1926. Private garages on the property were demolished in 1956. The residence is presently vacant.

A 200-gallon waste oil underground storage tank (UST) and a 1,000-gallon gasoline UST installed in the 1940s were removed from the Site in the early 1990s.

On July 7, 1999, Athanor Environmental Services, Inc. (AES) conducted a geophysical survey of the Site. The purpose of the investigation was to identify and mark any USTs located at the Site. No positive-negative magnetic dipole anomalies, typically representative of the magnetic signature of USTs, were identified. Consequently, AES concluded that no USTs were present beneath the Site.

AES advanced two soil borings to final depths of 20 feet below ground surface (bgs) on September 3, 1999. AES advanced one soil boring through the former location of the 1,000-gallon UST and one boring through the former location of the 200-gallon waste oil UST. Soil samples were collected at five-foot depth intervals throughout the length of each boring. The soil samples were analyzed for total petroleum

hydrocarbons modified for gasoline (TPH-g), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and methyl-tert-butyl-ether (MTBE). Concentrations of TPH-g, BTEX and MTBE were not detected in any of the soil samples analyzed with the exception of the soil sample (labeled A-20) collected from a depth of 20 feet bgs in the boring drilled through the area of the former gasoline UST where TPH-g and total xylenes were detected at concentrations of 970 milligrams per kilogram (mg/kg) and 28 mg/kg, respectively. MTBE and benzene were not detected in the soil sample.

AES recommended further subsurface investigation be conducted to collect soil and groundwater data to define the extent of lateral and vertical migration of petroleum hydrocarbon contamination beneath the area around the former gasoline UST.

FREY Environmental Inc. (FREY) conducted subsurface assessment activities at the Site on August 30, 2001. FREY cored through the concrete surface and manually excavated each soil boring to a depth of approximately 5 feet bgs in order to avoid subsurface obstructions. Kehoe Testing & Engineering (KTE), under subcontract to FREY, advanced soil borings Bl and B2 to final depths of 28 feet and 25 feet bgs, respectively, with a direct push drilling rig. The locations of borings B1 and B2 were inside the showroom, north of the former 1,000-gallon gasoline UST.

Soil samples were analyzed for TPH-g using EPA Method No. 8015M and for BTEX and MTBE using EPA Method No. 8021B. Concentrations of TPH-g, BTEX, and MTBE were not detected in soil samples collected from borings Bl and B2, except for TPH-g which was detected at a concentration of 9.1 mg/kg in soil sample Bl at 28 feet bgs.

Based on these findings, closure was granted to the Site from the Los Angeles Fire Department (LAFD) on November 28, 2001. However, it is noted that there were no records of soil sampling at the former gasoline pump island or associated piping.

Based on records reviewed from the LAFD, the former dealership also used in-floor hydraulic vehicle lifts (hoists) and a clarifier. No records were found at the LAFD or other agencies regarding lift or clarifier removal, sampling, or closure. However, a contractor's bid package dated 2004 was provided by the Site owner and line items were included for removal of the in-ground lifts and the clarifier. These areas were to be backfilled with concrete.

Arcadis was provided with a prior Phase I ESA report for the Site prepared by Ninyo & Moore (N&M) in 2003. The Site was still an auto dealership at that time. N&M stated the following RECs were associated with the Site: Ten hydraulic lifts in the service area; three-stage clarifier; areas of staining in the locations of aboveground storage tanks (ASTs), paint storage room, compressor room, and parts cleaner area; inactive spray booth; and four USTs removed in 1968. The report recommended additional environmental investigation. Arcadis notes the four USTs reported to have been removed in 1968 were listed in error and were not actually located onsite.

Based on the conclusions and recommendations of the Phase I ESA, N&M conducted a Phase II subsurface soil investigation. Soil samples were collected in the locations of the identified RECs at depths ranging from 10 - 20 feet bgs. For the most part, none of the analytes tested for were detected above the laboratory method detection limits. Detectable concentrations of constituents of concern (petroleum hydrocarbons) were detected in the compressor room, at the clarifier, near four lifts, and at the former gasoline UST.

N&M concluded that based on the results of all samples analyzed in proximity to the hydraulic lifts, and the apparent presence of a rock formation at approximately 15-19 feet below ground surface, that the extent of hydrocarbon contamination in the area of the lifts appeared to be limited to the immediate vicinity of two individual hydraulic lifts. N&M stated that detections of gasoline constituents in the location of the former gasoline UST were limited to the immediate area of the former UST and that the concentrations of contaminants detected were low, and in their opinion, would not be of concern to a regulatory agency. N&M further stated that since the former UST was closed by the Los Angeles Fire Department, no further action regarding the former UST was warranted. N&M did not discuss the low concentrations of TPH detected in the compressor room, at the clarifier, or by two other lifts.

Arcadis notes that soil samples collected at the hydraulic lifts were not analyzed for polychlorinated biphenyls (PCBs). Hydraulic oil produced prior to 1979 had the potential to contain PCBs.

On-Site Findings

The approximate 1.12-acre, irregular-shaped site is improved with a single-family residence at 430-430 ½ Savoy Street and a commercial building at 1201-1217 N. Broadway Street.

430-430 ½ Savoy Street

The northern portion of the Site is developed with a single-family residence constructed in 1926. The building is constructed on a south facing slope. The building is vacant and the building materials are in fair to poor condition. The building contains a kitchen, living room, bathroom, bedroom, and a basement. A basement level bedroom is also present. Building materials observed consisted of vinyl floor tiles, plaster, wood, Transite asbestos piping, and pipe insulation. A landscaped yard occupies the southern portion of the parcel. The basement level bedroom was likely addressed as 430 ½ Savoy Street.

1201-1217 N. Broadway

1201-1217 N. Broadway Street is developed with three attached warehouse-style structures originally built in 1924 as an automobile dealership, with garage additions in the 1930s and 1940s. An asphalt-paved parking lot is located east of the building. The building was renovated for the existing commercial use in the early 2000s.

The building is occupied by Johnson Fain, an architecture, urban design, and planning firm. The interior contains a lobby, offices, meeting rooms, kitchen, and restrooms. Patching is present on the sealed and glazed concrete floor in areas throughout the main office portion of the building. This area was formerly the service garage for the automobile dealership.

A model shop occupies the northern portion of the building and includes a 3D printer and a small paint booth. Fire resistant cabinets in the area contain small quantities of spray paints and model paints. Small quantities of paints are also stored in the shop on steel shelving. No evidence of spills or releases were observed on the containers or surrounding surfaces.

An outdoor area is located in the northwest portion of the Site, north of the model shop. Outdoor furniture and landscaping are present in the area. Vehicle access to the area is via a gravel and aged asphalt driveway from Bishops Road.

Based on the dates of construction of the onsite buildings, there is a potential for asbestos-containing building materials (ACBMs) and lead-based paints (LBP) to be present in the structures. Surveys for

ACBMs and LBP were conducted by N&M at the 1201-1217 N. Broadway building in 2003. The positive materials were reportedly abated in 2004, according to the contractor's bid package. It does not appear that ACBMs and LBP surveys have been conducted at the residence onsite.

The Site vicinity consists of residential uses, commercial and retail uses, and a historical park. In addition, the Los Angeles City Oilfield is located approximately 550-feet west of the Site. Based on the *Methane and Methane Buffer Zones* map prepared by the City of Los Angeles, it appears that the Site lies within a methane zone or methane buffer zone.

Regulatory Findings

An environmental database report prepared by Environmental Data Resources, Inc. (EDR) was reviewed for local, state, and federal listings for the Site and properties within the site vicinity. Regulatory database lists were reviewed for cases pertaining to leaking USTs (LUSTs) and ASTs, hazardous waste sites, and abandoned sites within the specified radii of standards established by ASTM guidelines.

According to EDR's report, the Site address of 1201 N. Broadway is listed in the LUST, HAZNET, UST, and FINDS databases. The Site is listed as Domenich Basso, Inc. and is listed in the HAZNET database for the tracking of the removal and disposal of 16.85 tons of asbestos-containing waste, 3.66 tons of waste oil, 4.57 tons of waste oil/sludge, and other waste oil and liquids in 2003. The facility is also listed for the tracking of disposal of other various automotive wastes between 1993 and 2003. The facility is listed in the FINDS database for the tracking of USTs in 2015.The facility is listed in the UST database for the tracking of one 1,000-gallon gasoline UST, one waste oil UST, and one waste oil/water separator sump.

According to EDR's report, numerous other properties are listed within the ASTM-search radius due to the Site's location in a dense urban area. However, based on their listing for tracking purposes only, distance from the Site, hydraulic location with respect to groundwater flow, and/or case closure, these off-site properties are unlikely to represent a concern of environmental impairment or a vapor encroachment condition to the Site.

The following nearby property of note was identified:

- Union Pacific Railroad Cornfield Site at 1245 North Spring Street is located adjacent south from the Site, beyond N. Broadway Street. This property is listed in multiple databases including SLIC, EnviroStor, and LUST. The site is a former Union Pacific Railroad facility that has been converted to use for the Metro Rail Gold Line and as a park. Groundwater is impacted primarily by benzene.

  Based on records reviewed from the Regional Water Quality Control Board (RWQCB), dating back to 1888, the property was used as a railroad transfer station, storage yard, and maintenance facility. Active rail operations ceased in mid-1999. Five areas of concern impacted soil and groundwater at the property. The groundwater monitoring program was first implemented in August 2000. Depth to groundwater at the site ranges from 28.51 ft bgs to 47.61 ft bgs and has been shown to flow to the south-southwest, away from the Site. Additionally, impacted groundwater is confined to the site boundary. Based on the information reviewed, this property is not expected to pose an environmental concern to the Site.

Conclusions

Arcadis has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E1527-13 for Phase I ESAs. The following REC was identified for the Site:

- Detectable concentrations of constituents of concern (petroleum hydrocarbons) were detected in soil in the former compressor room, at the former clarifier, near four former lifts, and at the former gasoline UST. The concentrations were typically low and unlikely to warrant regulatory oversight. However, should the impacted soil be excavated and removed from the Site, special handling will be required. The development of a Soil Management Plan prior to redevelopment of the Site is recommended.

The following de minimis and non-ASTM conditions were identified for the Site:

- It is possible that former residences onsite used septic systems. If remnant septic systems are encountered during future development activities, they should be removed in accordance with local regulatory guidelines.
- There is a potential for exposed surface soil at the residence to be impacted from deposition of airborne contaminants over time.
- Based on the Site's proximity to the Los Angeles City Oilfield, it appears that the Site lies within a methane zone or methane buffer zone. Therefore, specific development regulations and ordinances may apply to redevelopment of the Site.
- A survey for ACBMs and LBP is recommended for the residence onsite prior to renovations or demolition.

No CRECs or HRECs were identified during this assessment.

1 INTRODUCTION

Arcadis U.S., Inc. (Arcadis) was retained by McCourt Group LLC (McCourt) to conduct a Phase I Environmental Site Assessment (ESA) of the properties located at 1201-1217 N. Broadway and 430 and 430 and ½ Savoy Street in Los Angeles, Los Angeles County, California (the Site). The Site is proposed to be redeveloped with a transportation use or residential use.

1.1 Purpose

Arcadis understands that the purpose for conducting this Phase I ESA is to assess and document the current status of environmental conditions at the Site.

1.2 Detailed Scope of Services

As directed by McCourt, the Phase I ESA was conducted in accordance with the ASTM International (ASTM) E1527-13 Standard Practice for Site Assessments: Phase I Environmental Site Assessment Process. The goal of the Phase I ESA was to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and historical recognized environmental conditions (HRECs) associated with the property in conformance with ASTM E1527-13.

A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs.

A CREC is defined as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority and that subjects the property to activity and/or use limitations.

A HREC is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed in a manner accepted by the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent), without subjecting the property to any activity and use limitations.

The ASTM practice requires environmental professionals to identify data gaps following reasonable inquiry of site personnel and Arcadis' search for "reasonably ascertainable" resources. ASTM E1527-13 defines a data gap as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information."

Arcadis' scope of work included:

- On-site inspection of the Site to identify environmental conditions issues as defined above;
- Review of available environmental documents for the Site, including previous site assessments and investigations;
- Interviews with persons represented to be familiar with the operation and history of the Site;

- Review of property history through interviews, aerial photographs, on-line planning portals, and historical mapping (as available);
- Observation of adjacent properties and the local area to evaluate the potential for adverse environmental impact to the Site; and
- Contracting of Environmental Data Resources, Inc. (EDR) to identify sites of concern as required in the regulatory records review section of the ASTM practice for a Phase I ESA.

The Phase I ESA did not include the collection or analysis of soil, air, water, groundwater, transformer/ electrical fluids, hazardous building materials, or other samples, nor did it include a title search or search for environmental liens. This ESA did not include an assessment of the environmental (or health and safety) compliance status of the site operations.

1.3 Significant Assumptions

Arcadis has assumed that the information sources used for this assessment provided accurate information. Evaluations presented in this report are based exclusively on information provided by McCourt and site personnel and observations made during the site visit. No invasive field activities were conducted and no laboratory analyses were performed.

The boundaries of the Site were described in documents provided by McCourt and by interviews with onsite personnel. Arcadis assumed this information was accurate.

1.4 Limitations and Exceptions

The services performed and any opinions expressed by Arcadis in this report are based upon the limits of the assessment described herein. Arcadis has relied upon the accuracy of documents, information, data, and other materials provided or made available by McCourt and others. Arcadis has not independently verified such information and assumes no liability for the accuracy or completeness of such information. Arcadis makes no guarantee that site conditions do not exist, or will not exist in the future, that were undetected or that could lead to liability in connection with the Site. Similarly, past and present activities on the Site indicating the potential for the existence of environmental concerns may not have been discovered by Arcadis. Such activities may include those that would indicate the potential for regulated hazardous substances at the Site. Likewise, site conditions or site activities that were outside the scope of the services described above, or changes to site conditions or regulatory requirements may lead to liabilities in connection with the Site that are not identified in this report. Arcadis has reviewed the information obtained in connection with the performance of the services described above, in keeping with existing applicable environmental consulting standards and enforcement practices, but cannot predict what actions any given agency may take or what standards and practices may apply in the future.

Where access to portions of the Site or to structures on the Site was unavailable or limited, Arcadis renders no opinion and accepts no responsibility for assessment of the condition of these portions of the Site, including specifically, but not limited to, the presence of hazardous substances or petroleum products at these locations. In addition, Arcadis renders no opinion concerning the presence or absence of hazardous substances or petroleum products where direct observation of any part of the Site, or structure on the Site, is limited by physical obstructions.

The conclusions and observations are based upon limited data and professional opinions, and the assessment is performed on a particular date. Site conditions and activities may change after that date. Therefore, the risk of undiscovered environmental impairment of the Site cannot be ruled out. Arcadis does not make any representations or warranties regarding the condition or value of the Site, regardless of the results of the assessment presented in this report.

Arcadis makes no guarantees, certifications, warranties, or representations of any kind whatsoever, whether expressed or implied, regarding this Phase I ESA, the condition of the Site, or the liabilities associated with the Site.

1.5 Special Terms and Conditions

No special terms and conditions were imposed on this Phase I ESA.

1.6 Reliance

It is understood that this report will be prepared for the sole use of McCourt and their law firm Allen Matkins Leck Gamble Mallory & Natsis LLP, and the contents thereof may not be used or relied upon by any other entity without the express written consent and authorization of Arcadis. Use of this report by any other party shall be at such party's sole risk and liability.

1.7 Deviations

No deviations from the referenced ASTM Standard occurred.

1.8 Additional Services

No additional services beyond those outlined in ASTM E1527-13 were conducted as part of the assessment.

2 SITE LOCATION / LAND USE

2.1 Site Location

The Site is located at 1201-1217 N. Broadway Street and 430-430 ½ Savoy Street. The irregular-shaped, approximate 1.12-acre site is located between N. Broadway to the south, Bishops Road to the west, and Savoy Street to the north. The Site is located approximately 0.1-mile east of the 110 Freeway at its closest point. The Site Location Map and Site Plan are presented as **Figures 1 and 2**.

2.2 Site and Vicinity Characteristics

The portion of the Site located at 1201-1217 N. Broadway Street is developed with a warehouse-style building, exterior storage area, and asphalt-paved parking lot. The portion of the Site located at 430-430 ½ Savoy Street is developed with a single-family residence and backyard. The site vicinity is comprised of established commercial/retail properties, education uses, and residential uses.

Photographs of the Site and surrounding areas were taken to document current conditions and are included in **Appendix A**.

2.3 Current Use of the Property

At the time of Arcadis' site reconnaissance, the Site was occupied by Johnson Fain, an architectural, urban design and planning firm at 1201-1217 N. Broadway Street and a vacant single-family residential dwelling at 430-430 ½ Savoy Street.

2.4 Description of Structures, Roads, and Other Improvements on the Site

1201-1217 N. Broadway Street is developed with three attached warehouse-style structures originally built in 1924 with additions in the 1930s and 1940s. An asphalt-paved parking lot is located east of the building. 430-430 ½ Savoy Street is developed with a single-family residence constructed in 1926. A yard is located south of the residence.

Based on the age of the buildings, it is possible that asbestos-containing building materials (ACBMs) and lead-based paints (LBP) are present in the buildings. Prior to building renovations or demolition, a survey for ACBMs and LBP is recommended. No mold was observed in the buildings during the site inspection.

2.5 Current Uses of the Adjoining Properties

The adjoining properties and land uses include:

- North: Savoy Street followed by established residential properties.
- East: An asphalt-paved parking lot for the commercial property located at 1231 N. Broadway Street.

- South: N. Broadway followed by the Los Angeles State Historic Park and Metrolink Railroad easement.
- West: Bishops Road followed by Cathedral High School.

Based on visual observations, current activities at the adjacent properties do not appear to be of environmental concern to the Site.

3 USER-PROVIDED INFORMATION

Arcadis was not provided with an ASTM User Questionnaire.

3.1 Environmental Liens

Arcadis' review of regulatory records did not identify environmental liens recorded for the Site. In addition, according to information provided by EDR, the Site is not encumbered by an environmental lien or activity and use limitation (AUL). See **Appendix B** for a copy of the Environmental Lien and AUL Search report.

3.2 Activity and Use Limitations

Arcadis' review of regulatory records did not identify activity and use limitations, such as engineering controls, land use restrictions or institutional controls, that are in place at the Site and/or have been filed or recorded in a registry, nor did the EDR report.

3.3 Specialized Knowledge

McCourt does not have specialized knowledge or experience related to the Site other than as gained from a prior environmental report prepared for the Site. See Section 4.1 for a summary of the prior report.

3.4 Valuation Reduction for Environmental Issues

McCourt did not comment on whether the purchase price reasonably reflects the fair market value of the Site.

3.5 Commonly Known or Reasonably Ascertainable Information

Other than a portion of the prior report, McCourt did not provide any additional information on the environmental condition of the Site.

3.6 Obvious Contamination Presence or Likely Presence

The prior environmental report obtained from the Site owner and provided by McCourt concluded the following areas are RECS for the Site: Ten hydraulic lifts in the former service area; three-stage clarifier; historical staining in the areas of the ASTs, paint storage room, compressor room, and parts cleaner area; inactive spray booth; and four USTs removed in 1968. The report recommended additional environmental investigation. Arcadis notes that the removal of four USTs from the Site in 1968 is an error (mis-filed document). These USTs were not located on the Site.

3.7 Owner, Property Manager, and Occupant Information

According to a preliminary title report provided by the client, the Site is owned by Fain Broadway LLC and Johnson Broadway LLC (Assessor's Parcel Numbers 5414-021-001, 5414-021-004, 5414-021-007, 5414-

021-008, and 5414-021-021). The Site is mainly occupied and managed by Johnson Fain. The residence is unoccupied.

3.8 Reason for Performing Phase I ESA

The reason for performing the Phase I ESA was to evaluate current environmental conditions at the Site.

4 SITE HISTORY

Historical information obtained by Arcadis from EDR during this Phase I ESA is summarized in **Table 1**.

Table 1 Historical Information Reviewed

Source	Date	Information Obtained
Sanborn® Fire Insurance Maps (copies provided in **Appendix C)**	1888, 1894, 1906, 1950, 1953, 1957, 1960, 1964, 1965, 1968, and 1970	In the 1888 map, the Site is depicted as a portion of undeveloped “steep bank”. Zanja Madre, the original water ditch/aqueduct to Los Angeles, is labelled as located adjacent south of the Site in the area of N. Broadway. The Southern Pacific Railroad yard is depicted directly south of the Zanja Madre. The yard consists of a round house, maintenance shops, and railroad tracks. The 1894 map depicts the southern portion of the Site to be developed with five single-family dwellings along “Buena Vista Street”, currently N. Broadway. The northern portion of the Site is shown as undeveloped. Bishops Road is depicted adjacent west of the Site, beyond which is a “Calvary Cemetery”. Residential properties are depicted adjacent east of the Site and the Southern Pacific railyard is depicted south of the Site. The 1906 map depicts the Site to be developed with six residential properties. Savoy Street and residential properties are depicted north of the Site, similar to the present time. Residential properties are adjacent east of the Site. Buena Vista Street is depicted south of the Site, beyond which is the Southern Pacific freight yard. Bishops Road is depicted directly west of the Site, beyond which is a Calvary Cemetery. In the 1950 through 1960 maps, 1201-1212 N. Broadway is developed with an automobile dealership with a sales room, service, and repair and painting areas. The southeast portion of the Site including the addresses of 1217-1221 N. Broadway is developed with two residential dwellings and related private garages. 430 Savoy is developed with the existing residence and two attached private garages. Residential properties and a coffee roasting and storage facility with parking lot are adjacent east of the Site. N. Broadway is depicted south of the Site, beyond which is the Southern Pacific freight yard. Bishops Road is directly west of the Site, beyond which is the Cathedral High School and a used car sales lot. The 1964 through 1970 maps depict an automobile dealership occupying the existing Site structures at 1201-1211 N. Broadway. A parking lot is adjacent east of the structures, similar to the present time at 1217 N. Broadway. 430 Savoy is occupied by the existing residential structure. The private garages have been removed south of the residence. The adjacent properties are developed similar to that portrayed in the 1950-1960 maps. The Site’s use as a former automobile dealership indicates a potential environmental concern for the Site.

Source	Date	Information Obtained
Topographic Maps (copies provided in **Appendix C**)	1894, 1896, 1900, 1928, 1953, 1966, 1972, 1981, 1991/1994, and 2012	The 1894 through 1900 maps depict the Site and surrounding properties on Savoy Street as developed with residential properties. A large railyard is adjacent south of the Site, beyond N. Broadway Street. The 1928 map depicts a warehouse-style building in the southwest portion of the Site. Residential properties appear to occupy the other portions of the Site and surrounding properties along Savoy Street. A cemetery is depicted west of the Site and a large railyard is south of the Site. The 1953 map depicts the Site shaded with red indicating full urban development. A high school is depicted west of the Site. A large railyard is south of the Site. The 1966 through 1994 maps depict the Site as developed with the existing warehouse structures and residence. The 2012 map does not show any features onsite or in the surrounding area other than city streets. No features were depicted on the Site on the maps reviewed that would indicate an environmental concern for the Site.
Aerial Photographs (copies provided in **Appendix C**)	1923, 1928, 1938, 1948, 1952, 1964, 1977, 1979, 1983, 1989, 1994, 2002, 2005, 2009, 2012, and 2016	The 1923 photograph shows the Site to be developed with many residential properties. Similar residential properties are north and east of the Site along Savoy Street. Grass and trees are west of the Site, beyond Bishops Road. A large railyard is south of the Site, beyond N. Broadway Street. The 1928 photograph shows the southwest portion of the Site to be developed with a large warehouse structure. The remaining areas of the Site appear to be developed with residential properties. The surrounding properties appear similar to that shown in the 1923 photograph. The 1938 photograph shows two of the existing warehouse structures on the southwestern portion of the Site. Parked vehicles and residential properties occupy the remaining portions of the Site. Residential properties surround the Site along Savoy Street. The existing commercial building is east of the Site. A probable used car lot and high school are west of the Site, beyond Bishops Road. The existing former automobile dealership buildings are present in the 1948 photograph. Three residential buildings are directly east of the dealership buildings in the location of the existing parking lot. 430 Savoy Street is developed with a residence and possible garage. The surrounding properties appear similar to that shown in the 1938 photograph. The 1952 photograph shows the Site and surrounding area as developed similar to that shown in the 1948 photograph. The Site is developed with the existing structures and parking lot in the 1964 through 1994 photographs. The east parking lot appears to be used for vehicle storage and continues onto 430 ½ Savoy Street. Vehicles and equipment are shown in the northwest area of the Site. Residential properties are north of the Site. The existing commercial property and parking lot are east of the Site. A large railyard is south of the Site, beyond N. Broadway. A probable used car lot and a high school are west of the Site, beyond Bishops Road.

Source	Date	Information Obtained
		The 2002 through 2016 photographs show the existing configuration of the Site. The south former railyard began redevelopment in the early 2000s and continued progress is shown in the 2016 photograph. No features were shown on the Site on the photographs reviewed that would indicate an environmental concern for the Site.
City Directory Abstract (copy provided in **Appendix C**)	1920 - 2014	City directory listings were reviewed for the following current and historical site addresses: 430 Savoy 1924 – 2006 – private individuals 1201 N. Broadway 1924 – private individuals 1929 - 2000 – Domenich Basso Autos and Domenich Basso Chrysler-Plymouth 2006 - 2014 – Johnson Fain 1203 N. Broadway No listings 1205 N. Broadway No listings 1207 N. Broadway No listings 1209 N. Broadway No listings 1211 N. Broadway 1924 – private individual 1215 N. Broadway 1924 - 1937 – private individuals 1217 N. Broadway 1924 – 1962 – private individuals
Building Permit Report (copy provided in **Appendix C**)	1988 - 2018	The EDR Building Permit Report covers the years from 1988 to 2018. Only plumbing and HVAC permits were found for the year 2004. No building permits of an environmental concern were found.

4.1 Previous Environmental Investigations

Arcadis was provided with prior environmental reports prepared for the Site, as follows:

Ninyo & Moore (N&M). 2003. Phase I Environmental Site Assessment, 1201-1221 N. Broadway and 442-448 East Savoy Street, Los Angeles, CA. June 4.

Although the site addresses referenced in the title of the N&M report differ from the addresses assessed for Arcadis' investigation, the actual property inspected by N&M was confined to the former auto dealership (currently renovated for an office use occupied by Johnson Fain). At the time of N&M's investigation, the site consisted of one 26,000 square foot building on 1-acre of land. The building was occupied by an auto dealership consisting of a sales office, a parts storage area, a service bay, a body shop, and a paved parking lot. N&M stated that the Site was originally developed for residential use and then was redeveloped as an auto dealership circa 1924. The parking lot in the northeast portion of the Site was used for residential purposes until the early 1960s.

Review of a regulatory records database report for the Site and offsite properties did not identify any listings of concern. Review of local agency files identified a Los Angeles Fire Department closure letter for former USTs at the Site and a hazardous materials inventory that identified the use of motor oil, unleaded gasoline, automatic transmission fluid, waste oil, wash water, and automotive thinner at the Site. No other relevant local agency information was identified.

N&M concluded their report by stating the following RECs were identified for the Site: Ten hydraulic lifts in the service area; three-stage clarifier in the service area; areas of staining in the locations of the ASTs, paint storage room, compressor room, and parts cleaner area; inactive spray booth; and four USTs removed in 1968. The report recommended a subsurface investigation to "document the condition of soil in the vicinity of the identified onsite sources of hazardous materials or petroleum products."

Ninyo & Moore (N&M). 2003. Phase II Subsurface Investigation, 1201-1221 N. Broadway and 442-448 East Savoy Street, Los Angeles, CA. July 2.

Based on the conclusions and recommendations of N&M's Phase I ESA, N&M conducted a Phase II soil sampling investigation at the Site. The objective of the Phase II was to investigate the RECs identified in the Phase I ESA report. Soil sampling was conducted as follows:

- Gasoline AST – one boring to a depth of 15 feet. Analysis for total petroleum hydrocarbons with carbon chain analysis (TPH-cc) and volatile organic compounds (VOCs).
- Motor oil and automatic transmission fluid AST – one boring to a depth of 15 feet. Analysis for TPH-cc.
- Waste oil and waste antifreeze ASTs – two borings to a depth of 15 feet. Analysis for TPH-cc, VOCs, and Title 22 metals.
- Paint storage room and paint booth – two borings to a depth of 15 feet. Analysis for VOCs.
- Compressor area – one boring to a depth of 10 feet. Analysis for TPH-cc.
- Parts cleaner – one boring to a depth of 15 feet. Analysis for TPH-cc and VOCs.
- Clarifier – two borings to a depth of 10 feet. Analysis for TPH-cc, VOCs, and metals.
- Hydraulic hoists – 11 borings to depths of 15 and 20 feet. Analysis for TPH-cc.
- Depressed pavement area (possible location of four USTs removed in 1968) – one boring to 20 feet. Analysis for TPH as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tertiary butyl ether (MTBE).
- Former gasoline UST – three borings to a depth of 20 feet. Analysis for TPHg, BTEX, and MTBE.

Groundwater was not encountered in any of the borings. Arcadis notes that N&M did not discover evidence of four former USTs and that the permit for these USTs was placed in the Site address file at the Los Angeles Fire Department erroneously.

For the most part, none of the analytes tested for were detected above the laboratory method detection limits. Analytes detected were as follows:

- Compressor area – a TPH concentration of 11 milligrams per kilogram (mg/kg) in the C23-C36 range.
- Clarifier – TPH at 11 mg/kg in the C23-C36 range.
- Hydraulic hoists – TPH at 10 and 11 mg/kg in the C23-C36 range in two borings. TPH in the C23-C36 range in one boring ranging from 6,700 – 27,000 mg/kg and in another boring at 16,000 mg/kg.
- Former gasoline UST – TPHg (range of 37 – 150 mg/kg), toluene (22 micrograms per kilogram [µg/kg]), ethylbenzene (range of 160 – 710 µg/kg), and xylene (range of 280 – 1,300 µg/kg) in two borings.

N&M concluded that based on the results of all samples analyzed in proximity to the hydraulic hoists, and the apparent presence of a rock formation at approximately 15-19 feet below ground surface, that the extent of hydrocarbon contamination in the area of the hoists appeared to be limited to the immediate vicinity of two individual hydraulic hoists. N&M stated that detections of gasoline constituents in the location of the former gasoline UST were limited to the immediate area of the former UST and that the concentrations of contaminants detected were low, and in their opinion, would not be of concern to a regulatory agency. N&M further stated that since the former UST was closed by the Los Angeles Fire Department, no further action regarding the former UST was warranted. N&M did not discuss the low concentrations of TPH detected at the compressor area and the clarifier.

Arcadis notes that soil samples collected at the hydraulic hoists were not analyzed for polychlorinated biphenyls (PCBs). Hydraulic oil produced prior to 1979 had the potential to contain PCBs.

Ninyo & Moore (N&M). 2003. Asbestos and Lead-Based Paint Survey, 1201-1221 N. Broadway and 442-448 East Savoy Street, Los Angeles, CA. July 2.

The asbestos and lead-based paint (LBP) survey conducted by N&M was confined to the building occupied by the dealership. Sampling was not conducted in the residence that is part of the current Site. N&M collected 53 building material samples for asbestos analysis and obtained 276 x-ray fluorescence (XRF) readings for LBP. Asbestos was identified in floor tile and mastic, acoustical ceiling plaster, window putty, and roofing materials. Two Transite™ asbestos flue pipes were observed and were assumed to be asbestos containing. Numerous painted surfaces were identified as LBP.

According to a construction bid (see below), the identified asbestos-containing building materials (ACBMs) and LBP identified by N&M were abated prior to transitioning the auto dealership to an office use. However, previously unidentified ACBMs and LBP in the onsite building and in the vacant residence (currently a part of the Site) may be present. Prior to renovations or demolition of the existing buildings at the Site, a current survey for ACBMs and LBP is recommended.

Minardos. 2004. Quantity Survey, 1201 N. Broadway. January 13.

According to this bid package for renovating the building from an auto dealership use to an office use, line items were included for abatement of the ACBMs and LBP identified by N&M. Line items were also included for removal of the hydraulic hoists, waste oil AST, gasoline AST, and clarifier. The bid included filling in the areas occupied by the hoists and clarifier with concrete.

Copies of the prior reports are included in **Appendix D**; however, due to the size of the Phase I ESA report, only the text is included. The complete report can be provided upon request. See **Figure 3** for locations of the historical onsite features discussed in the N&M Phase I and II reports.

5 RECORDS REVIEW

As part of this assessment, Arcadis reviewed regulatory databases and available agency files and records for the Site. Information from these sources is discussed in the following sections.

5.1 Regulatory Database Research

An environmental database report prepared by EDR was reviewed for local, state, and federal listings for properties within the site area. Included in EDR's report are regulatory databases reviewed by EDR for cases pertaining to leaking underground storage tanks (USTs) and aboveground storage tanks (ASTs), hazardous waste sites, and abandoned sites within the ASTM-specified radii **(Table 2)**. EDR also reviewed selected databases generated by the United States Environmental Protection Agency (U.S. EPA). Explanations of the regulatory agency databases reviewed are presented in EDR's report, which is included as **Appendix E**.

It should be noted that the computerized geocoding technology used in the database search is based on available census data and is only accurate to approximately 300 feet. Also, elevations were determined from the U.S. Geological Survey Digital Elevation Model and are relative (not absolute). Sites with an elevation equal to or higher than the target property have been differentiated from sites with an elevation lower than the target property.

Sites identified within the study radii were evaluated to determine if they are likely to have adversely impacted the Site. The criteria used to evaluate the potential for adverse impact to the Site include:

- Distance from the Site;
- Expected depth and direction of groundwater and surface water flow;
- Expected storm water flow direction; and
- Presence/absence of documented contaminant releases at the identified sites not identified as remediated.

Table 2 **Regulatory Agency Databases / Lists Reviewed**

Search Radius	Agency	Database	Type of Records in Database
1 mile	U.S. EPA	NPL	Sites designated for Superfund cleanup by the U.S. EPA
	U.S. EPA	CORRACTS	RCRA facilities undergoing "corrective actions"
0.5 mile	U.S. EPA	SEMS	Sites under review by the U.S. EPA
	U.S. EPA	TSD	Facilities that treat, store, and/or dispose of hazardous waste
	RWQCB	LUST	Sites with LUSTs

Search Radius	Agency	Database	Type of Records in Database
	IWMB	SWLF/SWAT	Sites permitted as solid waste landfills, incinerators, or transfer stations
	IWMB	WMUDS/SWAT	Tracking and inventory of waste management units
	U.S. EPA	SEMS-Archive	Former CERCLIS sites with no further remedial actions planned.
Site or Adjacent Properties	U.S. EPA	RCRA Generator	Sites that generate large or small quantities of hazardous waste
	U.S. EPA	ERNS	Sites with reported accidental releases of oil and hazardous substances
	RWQCB	UST	Sites with registered USTs

5.1.1 Site

According to EDR's report, the Site address of 1201 N. Broadway is listed in the LUST, HAZNET, UST, and FINDS databases. The Site is listed as Domenich Basso, Inc. and is listed in the HAZNET database for the tracking of the removal and disposal of 16.85 tons of asbestos-containing waste, 3.66 tons of waste oil, 4.57 tons of waste oil/sludge, and other waste oil and liquids in 2003. The facility is also listed for the tracking of disposal of other various automotive wastes between 1993 and 2003. The facility is listed in the FINDS database for the tracking of USTs in 2015. The facility is listed in the UST database for the tracking of one 1,000-gallon gasoline UST, one waste oil UST, and one waste oil/water separator sump.

The facility is listed in the LUST database for a reported release. Records for the Site were reviewed from the Los Angeles Fire Department (LAFD). On March 26, 1991, one 1,000-gallon gasoline UST was removed from the Site. The UST was located under the sidewalk along N. Broadway Street. On December 20, 1993, one 200-gallon waste oil UST was removed from the Site. The UST was located inside the service building near the west entrance. Both USTs were removed under permit from, and supervision of, the LAFD. Consequently, in order to file a final closure report on the former USTs with the LAFD and request a final closure "no further action" letter, subsurface soil samples for analysis were collected.

On July 7, 1999, Athanor Environmental Services, Inc. (AES) conducted a geophysical survey of the Site. The purpose of the investigation was to identify and mark any USTs located at the Site. The vertical gradient magnetics method was employed and magnetics data was collected with a magnetometer and a conductible metal detector over all rooms and yards of the entire Site, including both yards and the driveway of the adjacent residential parcel.

No positive-negative magnetic dipole anomalies, typically representative of the magnetic signature of USTs, were identified. Consequently, it was concluded that no USTs are present beneath the Site (AES, 1999).

AES advanced two soil borings to final depths of 20 feet below ground surface (bgs) on September 3, 1999. AES advanced one soil boring (labeled A) through the former location of the 1,000-gallon UST and one boring (labeled B) through the former location of the 200-gallon waste oil UST. Soil samples were collected at five-foot depth intervals throughout the length of each boring (AES, 1999).

Soil samples were analyzed for total petroleum hydrocarbons modified for gasoline (TPH-g), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and methyl-tert-butyl-ether (MTBE). Concentrations of TPH-g, BTEX and MTBE were not detected in any of the soil samples analyzed with the exception of the soil sample (labeled A-20) collected from a depth of 20 feet bgs in the boring drilled through the area of the former gasoline UST. TPH-g and total xylenes were detected at concentrations of 970 milligrams per kilogram (mg/kg) and 28 mg/kg in soil sample A-20. MTBE and benzene were not detected in soil sample A-20 (AES, 1999).

AES recommended further subsurface investigation be conducted to collect soil and groundwater data to define the extent of lateral and vertical migration of petroleum hydrocarbon contamination beneath the area around Boring A.

FREY Environmental Inc. (FREY) conducted subsurface assessment activities at the Site on August 30, 2001. FREY cored through the concrete surface and manually excavated each soil boring to a depth of approximately 5 feet bgs in order to avoid subsurface obstructions. Kehoe Testing & Engineering (KTE) under subcontract to FREY, advanced soil borings Bl and B2 to final depths of 28 feet and 25 feet bgs, respectively, with a direct push drilling rig. The locations of borings B1 and B2 were inside the showroom, north of the former 1,000-gallon gasoline UST.

Soil samples were collected at depths of 15, 20, 25, and 28 feet bgs in boring Bl. Soil samples were collected from depths of 10, 15, 20, and 25 feet bgs in boring B2. Soil samples were collected in general accordance with EPA Method No. 5035.

Soil borings B3 and B4 were proposed to be located in N. Broadway at the east and west sides of the former 1,000-gallon gasoline UST. A subsurface object believed to be piping was encountered at approximately 5 feet bgs during the hand augering of soil boring B3. FREY subsequently cored three more locations through the asphalt, stepping away from the previous core approximately 3 feet each time. In each of the additional coring locations, a subsurface object believed to be piping was encountered between 3 feet and 5 feet bgs. FREY suspended attempts to drill borings B3 and B4 after the fourth attempt.

Soil samples were analyzed for TPH-g using EPA Method No. 8015M and for BTEX and MTBE using EPA Method No. 8021B. Concentrations of TPH-g, BTEX, and MTBE were not detected in soil samples

collected from borings Bl and B2, except for TPH-g which was detected at a concentration of 9.1 mg/kg in soil sample Bl at 28 feet bgs.

Based on these findings, closure was granted to the Site from the LAFD on November 28, 2001.

5.1.2 Off-Site Properties

According to EDR's report, numerous properties are listed within the ASTM-search radius due to the Site's location in a dense urban area. However, based on their listing for tracking purposes only, distance from the Site, hydraulic location with respect to groundwater flow, and/or case closure, the majority of these off-site properties are unlikely to represent a concern of environmental impairment or a vapor encroachment condition to the Site.

The following nearby property of note was identified:

- Union Pacific Railroad Cornfield Site at 1245 North Spring Street is located adjacent south from the Site, beyond N. Broadway Street. This facility is listed in several databases including SLIC, EnviroStor, and LUST. The site is a former Union Pacific Railroad facility that has been converted to use for the Metro Rail Gold Line and as a park. Groundwater is impacted primarily by benzene.

  Based on records reviewed from the Regional Water Quality Control Board (RWQCB), dating back to 1888, the site was used as a railroad transfer station, storage yard, and maintenance facility. Active rail operations ceased at the site in mid-1999. Five areas of concern impacted soil and groundwater at the facility. The groundwater monitoring program was first implemented in August 2000. Depth to groundwater at the site ranges from 28.51 ft bgs to 47.61 ft bgs and has been shown to flow to the south-southwest, away from the Site. Additionally, impacted groundwater is confined to the site boundary. Based on the information reviewed, this facility is not expected to pose an environmental concern to the Site.

One property is listed in EDR's orphan section; however, it is located greater than one-mile distant from the Site, and therefore, does not represent an environmental concern for the Site.

5.2 Agency Research

Files and records available at the agencies listed in **Table 3** were reviewed for information on the Site.

Table 3 Local Agency Files

Source	Date	Information Obtained
California Regional Water Quality Control Board (RWQCB)	January 2019	Available information maintained by the RWQCB at http://geotracker.waterboards.ca.gov was reviewed for records concerning hazardous spills, USTs, and LUSTs at the Site. Records were found and reviewed for the 1201 N. Broadway address and for the south adjacent former railyard. The information reviewed can be found in Sections 5.1.1 and 5.1.2.
Department of Toxic Substances Control (DTSC)	January 2019	A review of the DTSC website (http://www.envirostor.dtsc.ca.gov/public/) did not identify any records for the Site addresses.

City of Los Angeles Fire Department (LAFD)	January 2019	Records were searched for the site addresses on the LAFD's website at https://www.lafd.org/fire-prevention/cupa/public-records for USTs, ASTs, and hazardous materials. Records were found for the 1201 N. Broadway address. Information reviewed can be found in Section 5.1.1. Additionally, a 1999 Phase I Environmental Site Assessment for the 1201 N. Broadway address was found and reviewed. The report, dated June 14, 1999 was prepared by Orswell & Kasman, Inc. (O&K) for Domenich Basso, Inc. The Site was occupied by Domenich Basso, Inc., an automobile dealership and repair garage. The building was divided into a sales area, business offices, a custom car delivery area, a parts department, an automotive repair area, and a body shop. The automotive service area was located in the west side of the building. There were eleven service bays, with nine underground hoists and one aboveground hoist. Automotive fluids such as motor oil were stored and used onsite. The garage had a self-contained parts washing sink, which recirculated cleaning solvent into a solvent drum**,** and used oil filters were stored in 55-gallon drums. A body shop was located in the northwest comer of the building. A paint spray booth was located in the body shop. The spray booth was not operational and was used for the storage of automotive parts. Touch up paints were stored inside a flammable materials storage room. No significant oil spills or leaks were observed inside the garage. A 250-gallon aboveground waste oil tank and several drums of waste oil filters were stored in the north storage yard. The containers were properly labeled, and no significant stains or evidence of spillage were observed inside the concrete spill containment area. A three-stage waste water clarifier was also located inside the yard. A 1,000-gallon gasoline AST was located on the west side of the east parking lot. No evidence of sumps, pits or underground tanks were observed on the site. O&K reviewed LAFD records for the Site for historical background including the 1,000-gallon gasoline UST and 200-gallon waste oil UST discussed in Section 5.1.1. O&K also reviewed records regarding the removal of four USTs in 1968. However, based on Arcadis' review of the records, the address stated in the removal is 1201 South Broadway, not 1201 North Broadway. The records were misfiled with the LAFD. These misfiled records are also quoted in the 2003 Ninyo & Moore Phase I report. O&K concluded the report stating: "Based on a review of building records and historical aerial photographs and maps, an automobile sales and service business has operated on the subject property from 1921 until the present time. According to the LAFD records, two separate underground tanks were installed on the site in 1946 and 1949, and the tanks were removed from the site in 1991 and 1994. Soil samples collected in the excavated areas did not reveal any contamination problems. The records also indicate that four additional underground tanks were removed from the site in 1968, although there were no installation permits. There were no

Source	Date	Information Obtained
		records in the file concerning soil testing around the four removed tanks." O&K recommended additional environmental studies at the Site.
Los Angeles County Fire Department, Site Mitigation Unit (LACFD)	January 2019	Records for the Site addresses were searched on the LACFD's website at https://www.fire.lacounty.gov/hhmd/public-records-requests/. Records were not found for the Site addresses.
Los Angeles Department of Building and Safety (LADBS)	January 2019	LADBS records were searched for the site addresses at http://ladbs.org/services/check-status/online-building-records. The following pertinent permits were found and reviewed: 430 Savoy 1920 – add bedroom to existing dwelling 1926 – new residential dwelling 1956 – demolish garage, add downstairs sleeping area 1201 N. Broadway 1914 – remodel existing residence 1924 – new automobile dealership 1931 – add mezzanine, parts department, offices 1937 – add new garage 1946 – new garage addition 1203 N. Broadway 1924 – New garage and showroom 1209 N. Broadway 1924 – move existing residence to new location 1946 – additions to existing hotel/apartments 1211 N. Broadway 1924 – move existing residence to new location 1215 N. Broadway 1937 – move existing residence to new location 1217 – 1219 N. Broadway 1953 – fire damage to existing dwelling 1963 – demo apartment house, garage, and storage building 1963 – new parking lot 1221 N. Broadway 1923 – move existing residence to new location 1962 – demo single-family residence

Source	Date	Information Obtained
Los Angeles County Department of Public Works (DPW)	January 2019	DPW records were searched for the site addresses at http://ladpw.org/epd/CleanLA/OpenFileReview.aspx. The DPW does not have records related to industrial waste, USTs, clarifiers, or stormwater for the site addresses.
Division of Oil, Gas & Geothermal Resources (DOGGR)	January 2019	According to DOGGR's Well Finder database http://www.conservation.ca.gov/dog/Pages/Wellfinder.aspx, there are no oil or gas wells onsite; however, the Los Angeles City Oilfield is located approximately 550-feet west of the Site. Based on the *Methane and Methane Buffer Zones* map prepared by the City of Los Angeles, Bureau of Engineering, Department of Public Works (March 31, 2004), it appears that the Site lies within a methane zone or methane buffer zone. Therefore, specific development regulations and ordinances may apply to redevelopment of the Site.
National Pipeline Mapping System (NPMS)	January 2019	A review of the NPMS database at https://pvnpms.phmsa.dot.gov/PublicViewer did not identify any hazardous liquid pipelines or gas transmission pipelines on or adjacent to the Site.

6 ENVIRONMENTAL SETTING

6.1 Topography

According to information obtained from the U.S. Geological Survey 7.5-Minute Series Topographic Map of the Los Angeles quadrangle, dated 2012, the Site elevation is approximately 336 feet above mean sea level. The general topographic gradient of the surrounding area is relatively level to the east and south with an increase in elevation to the north and west.

6.2 Geology

The general geology summary provided by EDR specifies that the sediments beneath the Site have been identified as part of the Quaternary Series of the Quaternary System of the Cenozoic Era. According to the United States Department of Agriculture Soil Conservation Service, the Site is underlain by the Urban Land soil component, which indicates near surface soil has been reworked to the extent that native soil characteristics are no longer identifiable.

6.3 Surface Water

Arcadis did not observe surface water features onsite or adjacent to the Site.

6.4 Hydrogeology

Based on the findings of subsurface investigations conducted at the south former railyard as reported on the RWQCB's Geotracker website, depth to groundwater in the Site vicinity ranges from approximately 28.5 to 48 feet bgs with a flow direction to the south-southwest.

6.5 Flood Zones

According to the EDR report, the Site is not located within a flood zone.

7 SITE RECONNAISSANCE

On January 3, 2019, Mr. Blake Hunter, a representative of Arcadis, performed a reconnaissance-level assessment of the Site to observe general site conditions and indications of the possible release(s) of chemicals to the subsurface. A walk-over site reconnaissance was conducted to identify visible evidence of RECs. Mr. Hunter was accompanied by Mr. Chris Roades, Senior Associate with Johnson Fain, during the site reconnaissance. Photographs taken during the site reconnaissance are included in **Appendix A**.

7.1 Methodology and Limiting Conditions

Arcadis' representative was granted full access to the Site. The methodology for the site visit included walking and observing the entire site.

7.2 General Site Conditions

7.2.1 Site Observations

The approximate 1.12-acre, irregular-shaped site is improved with a single-family residence at 430-430 ½ Savoy Street and a commercial building at 1201-1217 N. Broadway Street.

430-430 ½ Savoy Street

The northern portion of the Site is developed with a single-family residence constructed in 1926. The building is constructed on a south facing slope. The building is vacant and in fair to poor condition. The building contains a kitchen, living room, bathroom, bedroom, and a basement. A basement level bedroom is also present. Building materials observed consisted of vinyl floor tiles, plaster, wood, Transite asbestos piping, and pipe insulation. A landscaped yard occupies the southern portion of the parcel. The basement level bedroom was likely addressed as 430 ½ Savoy Street.

1201-1217 N. Broadway

1201-1217 N. Broadway Street is developed with three attached warehouse-style structures originally built in 1924 as an automobile dealership, with garage additions in the 1930s and 1940s. An asphalt-paved parking lot is located east of the building. The building was renovated for the existing commercial use in the early 2000s.

The building is occupied by Johnson Fain, an architecture, urban design, and planning firm. The interior contains a lobby, offices, meeting rooms, kitchen, and restrooms. Patching is present on the sealed and glazed concrete floor in areas throughout the main office portion of the building. This area was formerly the service garage for the automobile dealership.

A model shop occupies the northern portion of the building and includes a 3D printer and a small paint booth. Fire resistant cabinets in the area contain small quantities of spray paints and model paints. Small quantities of paints are also stored in the shop on steel shelving. No evidence of spills or releases were observed on the containers or surrounding surfaces.

An outdoor area is located in the northwest portion of the Site, north of the model shop. Outdoor furniture and landscaping are present in the area. Vehicle access to the area is via a gravel and aged asphalt driveway from Bishops Road.

7.2.2 Hazardous Substances and Petroleum Products in Connection with Identified Uses

Small quantities of paints are stored in the model shop on steel shelving and in fire resistant cabinets. No evidence of releases or spills was observed on the containers or surrounding surfaces.

7.2.3 Storage Tanks

Arcadis did not observe ASTs at the Site. No evidence of USTs, such as dispensers, pipes, or vent lines, was observed on the Site.

7.2.4 Odors

No odors that would indicate an environmental concern were noted on the Site.

7.2.5 Pools of Liquid

No readily visible standing surface water, pools, or sumps containing liquids likely to be hazardous substances or petroleum products were identified during this assessment.

7.2.6 Drums

No drums were observed onsite.

7.2.7 Hazardous Substances and Petroleum Product Containers (Not Necessarily in Connection with Identified Uses)

No hazardous substances or petroleum products were observed onsite not in connection with identified uses.

7.2.8 Unidentified Substance Containers

No unidentified substance containers were observed onsite.

7.2.9 PCBs

No electrical or hydraulic equipment known to contain polychlorinated biphenyls (PCBs) or likely to contain PCBs was identified onsite during this assessment.

One pad-mounted electrical transformer is located in the northwest outdoor portion of the Site. The transformer is owned, operated, and maintained by the Los Angeles Department of Water and Power and was observed to be in good operating condition.

7.2.10 Pits, Ponds, or Lagoons

During the site visit, Arcadis' representative looked for pits, ponds, or lagoons on the Site. Arcadis' representative also looked for pits, ponds, and lagoons on adjoining properties to the extent that such features could be visually and/ or physically observed from the Site or identified in the interviews or records review. No such features were identified on or near the Site.

7.2.11 Stained Soil or Pavement

During the site visit, Arcadis' representative did not observe areas of stained soil or pavement other than from normal usage.

7.2.12 Stressed Vegetation

During the site visit, Arcadis' representative looked for areas of stressed vegetation (from other than insufficient water). No areas of stressed vegetation were observed during this assessment.

7.2.13 Solid Waste

During the site visit, Arcadis looked for areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of trash construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting trash or other solid waste disposal. No such areas were observed. Solid waste is stored in dumpsters located in the east parking lot.

7.2.14 Wastewater

During the site visit, Arcadis looked for wastewater or other liquids (including storm water) or discharges into a drain, ditch, underground injection system, or stream on or adjacent to the Site. No wastewater is generated onsite and no clarifiers were observed at the Site. Mr. Roades was not aware of any clarifiers onsite.

7.2.15 Wells

During the site visit, Arcadis looked for wells, including water wells, dry wells, irrigation wells, injection wells, monitoring wells, abandoned wells, oil wells, or other wells. No wells were observed onsite.

7.2.16 Septic Systems

During the site visit, Arcadis did not observe evidence of septic systems or cesspools. The Site is connected to the municipal sanitary sewer system. It is possible that former residences onsite used septic systems. If remnant septic systems are encountered during future development activities, they should be removed in accordance with local regulatory guidelines.

7.2.17 Heating / Cooling

Heating/cooling systems for the 1201-1217 N. Broadway portion of the Site are located on the roofs of the buildings. The 430-430 ½ Savoy Street residence contains an aged heater in the basement of the building.

7.2.18 Stains or Corrosion

Arcadis did not observe areas of staining or corrosion during this assessment.

7.2.19 Drains or Sumps

Storm water runoff is directed to drains in the adjacent streets. Steel-grated surface drains were observed in the northwest outside area of the Site. The drains reportedly direct stormwater to the adjacent streets.

8 INTERVIEWS

8.1 Interview with Site Contacts

Arcadis' representative interviewed Mr. Chris Roades with Johnson Fain. Mr. Roades was not aware of the previous use of the Site; however, he did hear it may have been an automobile dealership. Mr. Roades was not aware of any environmental concerns with the Site. He stated the residence at 430 Savoy Street has been vacant for a long time and vagrants occasionally occupy the building. Mr. Roades was not aware of any USTs, vehicle lifts, ASTs, or clarifiers onsite. He was also not aware of any asbestos or lead based paint abatement or Operations and Maintenance Programs for the Site.

9 FINDINGS AND CONCLUSIONS

Arcadis has performed a Phase I ESA in accordance with the ASTM International E1527-13 Standard Practice for Site Assessments: Phase I Environmental Site Assessment Process. Limitations or deviations from this practice are described in Section 1.4 of this report. The findings identified by Arcadis are summarized below and discussed in greater detail in the body of the report.

9.1 Recognized Environmental Conditions

The following REC was identified in connection with the Site:

- Detectable concentrations of constituents of concern (petroleum hydrocarbons) were detected in soil in the former compressor room, at the former clarifier, near four former lifts, and at the former gasoline UST. The concentrations were typically low and unlikely to warrant regulatory oversight. However, should the impacted soil be excavated and removed from the Site, special handling will be required. The development of a Soil Management Plan prior to redevelopment of the Site is recommended.

9.2 Controlled Recognized Environmental Conditions

No CRECs were identified in connection with the Site.

9.3 Historical Recognized Environmental Conditions

No HRECs were identified in connection with the Site.

9.4 *De Minimis* Conditions

No *de minimis* conditions were identified in connection with the Site, with the following exceptions:

- It is possible that former residences onsite used septic systems. If remnant septic systems are encountered during future development activities, they should be removed in accordance with local regulatory guidelines.
- There is a potential for exposed surface soil at the residence to be impacted from deposition of airborne contaminants over time.
- Based on the Site's proximity to the Los Angeles City Oilfield, it appears that the Site lies within a methane zone or methane buffer zone. Therefore, specific development regulations and ordinances may apply to redevelopment of the Site.

Although not an ASTM condition, a survey for ACBMs and LBP is recommended for the residence prior to renovations or demolition.

9.5 Conclusions

Arcadis has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E1527-13 for Phase I ESAs. This assessment has revealed no evidence of RECs in connection with the Site other than as identified in Section 9.1 above. The development of a Soil Management Plan prior to redevelopment of the Site is recommended.

10 DATA GAPS

Questionnaires completed by the current and past site owners/occupants were not provided to Arcadis. In addition, the interval between aerial photographs and topographic maps exceeds 5 years. These limiting factors represent data gaps. Based on information obtained by Arcadis during our review of historical sources, interviews and observation of site conditions during our visit, the lack of completed questionnaires and additional photographs and maps would not appear to be significant and we do not anticipate that the information that could be obtained from these sources would change the conclusions of this report. Pertinent data, if any, obtained by McCourt following the issuance of this report should be reviewed by an environmental professional and an addendum should be prepared to present an evaluation of the data and any changes to the conclusions of this report, as warranted by the data.

11 ENVIRONMENTAL PROFESSIONALS STATEMENT

The environmental assessment described herein was conducted by the undersigned employee of Arcadis. Arcadis' assessment consisted solely of the activities described in the Introduction of this Report, and in accordance with the ASTM E1527-13 guidelines for Phase I Environmental Site Assessments signed prior to initiation of the assessment, as applicable.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. *

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by ARCADIS U.S., Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

Project: McCourt

Coordinates:

Latitude:	34.06943 34° 4' 10" North

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILDFAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of ARCADIS U.S., Inc. on Dec 11, 2018.

TARGET PROPERTY

1201 N. Broadway
Los Angeles, CA 90012

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Subject: Phase I Environmental Site Assessment
1201-1221 N. Broadway and 442-448 E. Savoy Street
Los Angeles, California

Dear Ms. Ho:

In accordance with your letter of authorization dated May 19, 2003, Ninyo & Moore has performed a Phase I Environmental Site Assessment for the above-referenced commercial property. The attached report presents our methodology, findings, conclusions and recommendations regarding the environmental conditions at the site.

We appreciate the opportunity to be of service to Johnson Fain. If you have any questions regarding this report, please contact the undersigned at your convenience.

Respectfully submitted,
NINYO & MOORE

Appendix C – Environmental Database Report

1. INTRODUCTION

Johnson Fain has authorized Ninyo & Moore to perform a Phase I Environmental Site Assessment (ESA) for the property located at 1201-1221 North Broadway and 442-448 East Savoy Street located in the city of Los Angeles, Los Angeles County, California (site, Figure 1). The Phase I ESA has been performed in accordance with the contract dated May 19, 2003 between Johnson Fain and Ninyo & Moore.

1.1. Purpose

The purpose of this Phase I ESA was to evaluate whether Recognized Environmental Conditions (RECs), as defined in the American Society of Testing and Materials (ASTM) Standard E 1527-00, are present due to past or present land use of the site, and/or properties in the site vicinity.

1.2. Limiting Conditions and Methodology

The scope of this evaluation did not include subsurface exploration, soil or water sampling, chemical analysis, or an evaluation of radon, lead or asbestos. The scope of this evaluation did not include an evaluation of geotechnical conditions and/or hazards. Properties surrounding the site were visually inspected from public rights-of-way. Our observations were made from readily accessible vantage points. Although reasonable effort was made to view relevant site features, some features may have been concealed.

2. SITE DESCRIPTION

This section provides a description of the site and adjoining properties. This section also includes a description of current uses of the site and adjoining properties.

2.1. Site Location

The site consists of an automobile dealership on approximately 1 acre of land at 1201-1221 North Broadway and 442-448 East Savoy Street, Los Angeles County, California (Figure 1). The site is an irregular-shaped and is located on the northeastern corner of North Broadway

and Bishop Road (Figure 2). The site is bounded to the northeast by residential properties and Savoy Street; to the northwest by Bishop Road; to the southeast by Li Hing of Hong Kong, Oriental Arts & Crafts; and on the southwest North Broadway (Figure 2). Color photographs of the site and surround properties are provided in Appendix A.

2.2. Site and Site Vicinity Characteristics

The site and site vicinity are in an area of commercial, residential, and educational use.

2.3. Site Improvements

The site is improved with an automotive dealership consisting of one building totaling approximately 26,000 square feet on approximately 1 acre of land. The site includes a sales office, a parts storage area, a service bay area, an automotive body-shop area, and a paved parking area.

2.3.1. Heating and Cooling Systems

The site building utilizes natural gas operated roof-mounted units for heating. Air conditioning is supplied by electrically operated roof-mounted units. Electricity is supplied to the site by the City of Los Angeles Department of Water and Power (DWP) and natural gas is supplied by The Southern California Gas Company.

2.3.2. Sewage Disposal

Municipal sewer services are supplied by the City of Los Angeles.

2.3.3. Potable Water

Potable water is provided to the site by the City of Los Angeles.

2.4. Previous Environmental Reports

Ninyo & Moore was provided a letter report submitted to the Los Angeles Fire Department (LAFD), completed by Frey Environmental, Inc. (Frey) and dated September 17, 2001 (Ap-

pendix B). According to the letter report, soil sampling had previously been conducted at the site by Athanor Environmental Services (AES) in 1999. AES had advanced two borings, one in the vicinity of a former 1,000-gallon gasoline underground storage tank (UST) and a 200-gallon waste oil UST. The former gasoline UST had been located beneath the sidewalk along North Broadway, in front of the sales showroom, and the former waste oil UST was located inside the service shop. Total petroleum hydrocarbons as gasoline (TPHg) was detected at 970 milligrams per kilogram (mg/kg) and xylene was detected at 28 mg/kg in a soil sample collected at 20 feet bgs in the vicinity of the former gasoline UST. TPHg, BTEX, and MTBE were not detected in any of the remaining samples.

The purpose of the Frey investigation was to further assess the extent of the TPH in the area of the former gasoline UST. Frey advanced two additional borings inside the showroom in the vicinity of the former gasoline UST to depths of 25 and 28 feet bgs. Additional borings were attempted in the sidewalk area of North Broadway, but was met with refusal due to the presence of piping at 5 feet bgs. TPHg was detected at a low concentration of 9.1 mg/kg at 28 feet bgs in one boring location. No other constituents were detected. Based on the analytical results, Frey concluded that the soil containing concentrations of petroleum hydrocarbons was limited and no further action was required for the site. LAFD reviewed the letter report from Frey and regulatory closure for the site was granted on November 28, 2001.

2.5. Current Uses of the Property

At the time of our site reconnaissance, the site was utilized by Domenich Basso Inc., Chrysler/Jeep for car sales, leasing, and servicing purposes. The site consists of a sales/showroom area, service area, and an automotive body-shop area.

2.6. Past Uses of the Property

From at least 1924 through the time of this report, the majority of the site has been occupied by an automobile dealership. The current parking lot on the northeast portion of the site was

used for residential purposes until the early 1960s. Prior to 1924, the site was used for single-family residential purposes.

3. PHYSICAL SETTING

The following sections describe the geologic and hydrologic characteristics of the site vicinity.

3.1. Site Topography

The site vicinity slopes steeply downward to the southwest. Drainage from the site is via sheet flow to the curb and gutter systems located along the surrounding streets. Based on the review of the United States Geological Survey (USGS) Topographic Map, Los Angeles, California Quadrangle, the site has an approximate elevation of 300 feet above mean sea level.

3.2. Geologic and Hydrogeologic Setting

Based on our review of documents published by the State of California Division of Mines and Geology, the site area is situated in the Los Angeles Basin within the Transverse Ranges Geomorphic Province of California. The general site vicinity is likely underlain by several thousand feet of Quaternary-age marine and non-marine sedimentary deposits. The immediate site vicinity on the southwest side of the Elysian Hills is underlain by several hundred feet of Pleistocene older dune sands consisting of fine to medium sand with silt and gravel lenses. The depth to bedrock is approximately 4,000 to 6,000 feet below surface grade (bsg).

Based upon information provided in the Frey letter report, groundwater depth in the vicinity of the site is expected to be in excess of 50 feet bsg. Groundwater in the site vicinity is expected to flow in a southwestern direction, following surface topography.

4. RECORDS REVIEW

The following sections describe the records review

4.1. Environmental Records Reviews and Interviews

The following sections describe the environmental record reviews and interviews.

4.1.1. Mapped Database Records Search

A computerized, environmental database search was performed for Ninyo & Moore by FirstSearch of Los Angeles, California. The FirstSearch database search dated May 19, 2003, included federal, state, and local databases. A complete description of the assumptions and approach to the database search, as well as the results, is provided in Appendix C. The review was conducted to evaluate whether the site or properties within the vicinity of the site have been identified as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects. Ninyo & Moore also reviewed the "unmappable sites" presented in the FirstSearch report. One facility was listed, however it does not appear to be located within the search radii.

National Priorities List (NPL): Distance Searched – 1.0 mile

The NPL is the Environmental Protection Agency's (EPA) database of uncontrolled or abandoned hazardous waste properties identified for priority remedial actions under the Superfund program.

Neither the site nor properties located within a 1.0-mile radius from the site were listed.

Corrective Action Report (CORRACTS): Distance Searched – 1.0 mile

The EPA maintains this database of RCRA facilities, which are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The site was not listed on this database. One facility was listed within a 1.0-mile radius from the site. The Los Angeles Department of Water and Power Building No. 3, at 1630 N. Main Street, is located approximately 0.33 mile southeast of and downgradient from the site. According to FirstSearch, this facility was a former town gas plant. Based upon the distance and direction of this facility from the site, this facility would not be considered an environmental concern to the site.

State Sites: Distance Searched – 1.0 mile

The State Sites database is maintained by the California Environmental Protection Agency (Cal-EPA), Department of Toxic Substance Control (DTSC). This database contains information on Annual Workplan Sites, and both known and potentially contaminated properties. Two-thirds of these properties have been classified, based on available information, as needing "No Further Action" (NFA) by the DTSC. The remaining properties are in various stages of review and remediation to determine if a problem exists.

The site was not listed on this database. Fourteen facilities are located within a 1.0-mile radius from the site was listed. The nearest facility, California Brass Manufacturing, at 1447 Naud Street, is located approximately 0.2-mile southeast of and downgradient from the site. According to the FirstSearch report, the status was listed as "referred to county." The remaining facilities are located at least 0.3-mile from the site. Based upon the distances and directions of these facilities from the site, the facilities would not be considered an environmental concern to the site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – 0.5 mile

The CERCLIS database contains properties which are either proposed or on the NPL and properties which are in the screening and assessment phase for possible inclusion on the NPL.

Neither the site nor properties located within a 0.5-mile radius from the site were listed.

Resource Conservation and Recovery Act (RCRA) Treatment, Storage and Disposal (TSD) Facilities List: Distance Searched – 0.5 mile

The RCRA TSD database is a compilation by the EPA of facilities, which report generation, storage, transportation, treatment or disposal of hazardous waste.

The site was not listed on this database. One facility was listed within a 0.5-mile radius from the site. The Los Angeles Department of Water and Power Building No. 3, at 1630 N. Main Street, is located approximately 0.33 mile southeast of and downgradient from the site. According to FirstSearch, this facility was a former town gas plant. Based upon the distance and direction of this facility from the site, this facility would not be considered an environmental concern to the site.

State Leaking Underground Storage Tank (LUST) Lists: Distance Searched – 0.5 mile

Databases of the Leaking Underground Storage Tank (LUST) information system are maintained by the California Environmental Protection Agency and the Regional Water Quality Control Board.

The site was not listed. Five LUST cases are reported within a 0.5-mile radius from the site. The status of 2 of the facilities was listed "case closed", and two of the listings were duplicate listings. Of the five cases only one is located upgradient from the site. Bortz Oil is located approximately 0.46 mile northeast of and upgradient from the site. According to FirstSearch, this facility experienced an unauthorized release of gasoline and is currently undergoing pollution characterization. Based upon the distance, this facility is not considered an environmental concern to the site.

Solid Waste Landfill Sites (SWL): Distance Searched – 0.5 mile

The SWL database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

Neither the site nor facilities within a 0.5-mile radius of the site were listed on this database.

Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Registration List: Distance Searched – Site and Adjoining Properties

UST and AST databases are provided by the State Water Resources Control Board and the Los Angeles Fire Department. Inclusion on these lists is for permitting purposes and is not indicative of a release.

The site was listed on this database. Domenich Basso, Inc. was listed on this database with no details provided.

No adjoining properties to the site were listed on this database.

RCRA Generators List: Distance Searched – Site and Adjoining Properties

This list identifies sites, which generate hazardous waste as defined by RCRA. Inclusion on these lists is for permitting purposes and is not indicative of a release.

Neither the site nor adjoining properties to the site were listed on this database.

Emergency Response Notification System (ERNS) List: Distance Searched – Site and Adjoining Properties

The ERNS database contains information of reported releases of oil and hazardous substances.

Neither the site nor adjoining properties to the site were listed on this database.

4.1.2. Regulatory Agency Records Reviewed

4.1.2.1. South Coast Air Quality Management District (SCAQMD)

A request was submitted to the SCAQMD to review records of permits or violations at the site. According to the SCAQMD records, the site currently maintains an active permit for a gasoline aboveground storage tank (AST). No indications of spills or releases were identified in the documents. A copy of the documents obtained from the SCAQMD are provided in Appendix B.

4.1.2.2. City of Los Angeles Fire Department

Ninyo & Moore requested information from the City of Los Angeles Fire Department (LAFD) regarding USTs and hazardous material inventory records for the site. A Subsurface Soil Investigation and Geophysical Survey conducted by AES dated September 23, 1999 was on file. The purpose of the soil sampling was to assess whether MTBE was present in soil in the vicinity of two former USTs in order to obtain LAFD closure. The purpose of the geophysical survey was to assess possible UST locations at the site. Included in the appendices of the AES report was a previous Phase I ESA, laboratory data from previous subsurface investigations, and various correspondences. The contents of the appendices are summarized below.

The previous Phase I ESA was conducted by Orswell & Kasman (O&S) and was dated December 30, 1993. According to O&S report, the site had been used as an automotive dealership since 1921. Prior to 1921 the site had been used for residential purposes. O&S reported that the site was well maintained and no significant spills or releases were observed. LAFD records summarized by O&S indicated that

a 1,000-gallon gasoline UST had been installed on the southwestern portion of the site in 1946. A 280-gallon waste oil UST had been installed on the northwestern portion of the site in 1949. The gasoline UST was reported to have been removed in 1991 and the waste oil UST removed in 1993. In addition, O&S reported that LAFD records indicated that 4 additional USTs had been removed from the site in 1968. A permit was issued to Occidental Life Insurance Co. at 1201 North Broadway to remove 2 2,000-gallon gasoline USTs, a 4,000 gallon gasoline UST, and a 150-gallon waste oil UST. No other information regarding the 4 additional USTs was provided by O&S. It should be noted that the UST removal permit referred to by O&S was not present in the LAFD file reviewed by Ninyo & Moore. O&S recommended that further environmental studies be conducted to assess whether each of the reported USTs had been removed from the site.

An LAFD application to remove a 1,000-gallon gasoline UST was dated January 3, 1991. The owner on the permit was Domenich Basso. A waste manifest for "underground tank rinsate" was dated March 26, 1991.

Laboratory results and Chain-of-Custody records from Certified Testing Laboratories were dated April 1, 1991. Based upon the Chain-of-Custody, one soil sample appears to have been collected from beneath the former gasoline UST location. The sample was analyzed for TPHg and BTEX in accordance with EPA Method Nos. 8015M and 8020. Neither TPHg nor BTEX were detected in the sample.

A cover letter from Kenyon & Associates, Inc. (KAI) was dated December 30, 1993. Attached to the letter was a plot plan, a Chain-of-Custody, waste manifest for the disposal of an "empty storage tank," and laboratory results. According to the plot plan, two soil samples were collected from the northwestern portion of the site in the vicinity of the former waste oil UST. The Chain-of-Custody indicated that one soil sample was collected from "below tank" and the other from "stockpile." The samples were analyzed for total recoverable petroleum hydrocarbons (TRPH)

and BTEX in accordance with EPA Method Nos. 418.1 and 8020, respectively. Neither TRPH nor BTEX were detected in the samples.

According to the AES report, a 1,000-gallon gasoline UST and a 200-gallon waste oil UST were removed from the site in 1991 and 1993, respectively. AES had advanced two borings, one in the vicinity of the former 1,000-gallon gasoline UST and one near the 200-gallon waste oil UST. The samples were analyzed for TPHg, BTEX, and MTBE in accordance with EPA Method Nos. 8015M and 8021B, respectively. TPHg was detected at 970 mg/kg and xylene was detected at 28 mg/kg in the soil sample collected at 20 feet bgs in the vicinity of the former gasoline UST. TPHg, BTEX, and MTBE were not detected in any of the remaining samples. Evidence of possible USTs at the site was not found during the geophysical survey. Based upon the analytical results, AES recommended that additional soil sampling activities be performed in the vicinity of the former gasoline UST.

Another letter report by AES was dated October 22, 1999. The letter report reiterated that a subsurface investigation had been conducted at the site and MTBE had not been detected in the two soil samples collected at the site.

Copies of the previously summarized Frey letter report and LAFD closure letter were also on file. Copies of documents obtained from the LAFD are provided in Appendix B.

LAFD hazardous material inventory records were also requested. The hazardous material inventory for Domenich Basso, Inc. is included in Appendix B. Hazardous materials listed as being used or stored at the site include motor oil, unleaded gasoline, automatic transmission fluid, waste oil, wash water, and automotive thinner.

4.1.2.3. City of Los Angeles Sanitation Bureau (LASB)

A request was submitted to the LASB to review records of wastewater discharge at the site. As of the date of this report, the LASB has not responded to our request.

Should information become available which changes the conclusions or recommendations of this report, this information will be included as an addendum to this report.

4.1.2.4. County of Los Angeles Department of Health Services (LADOHS)

A written request for records was made to the LADOHS for hazardous materials/waste information regarding the site. The LADOHS indicated that no records pertaining to 448 & 442 East Savoy Street. The LADOHS has not responded to our requests for records for 1201-1221 North Broadway. Should information become available which changes the conclusions or recommendations of this report, this information will be included as an addendum to this report.

4.1.2.5. Regional Water Quality Control Board (RWQCB), Los Angeles Region

Ninyo & Moore requested information from the Los Angeles Region of the Regional Water Quality Control Board (LARWQCB) LUSTs Division and the spills, leaks, investigations, and cleanup (SLIC) Division for the site addresses. No files were reported by LARWQCB for the site addresses with the LUST or SLIC Divisions.

4.2. Historical Use Information

From at least 1924 through the time of this report, the majority of the site has been occupied by an automobile dealership. The current parking lot on the northeast portion of the site was used for residential purposes until the early 1960s. Prior to 1924, the site was used for single-family residential purposes.

The following sections present the results of Ninyo & Moore's review of specific historical information sources.

4.2.1. Aerial Photograph Review

Aerial photographs covering selected years from 1938 through 1992 were obtained from Rupp Aerial Photography (Rupp) in Corona, California. A description of the photographs follows.

1938 and 1952 – The current automotive dealership and two smaller residential buildings were apparent at the site. Residential properties and Savoy Street were apparent to the northeast of the site and North Broadway was visible to the southwest of the site. Bishop Road was visible to the northwest of the site followed by a parking lot and a school. A commercial building was visible to the southeast of the site. The site vicinity appeared to generally a mixture of residential and commercial buildings.

1968, 1972, 1985, and 1992 – The site appeared approximately as it did during the site reconnaissance. A residential neighborhood was apparent to the north of the site. The site vicinity is similar to that of 1952.

4.2.2. Fire Insurance and Other Maps Review

FirstSearch was contracted to provide Sanborn Fire Insurance maps (Sanborns) for the site. Sanborn Maps dated 1894 through 1970 were provided. According to the 1894 and 1906 maps, 5 dwellings were located at the site. The maps dated 1950 to 1960 depicted the current automotive dealership on site. On site activities included automotive repair, painting, sales, and service. In addition, 2 residential buildings were also shown on the northeastern portion of the site. The 1964 through 1970 maps depicted the current automotive dealership along with a parking area on the northeastern portion of the site. The Sanborn maps did not depict ASTs or USTs at the site.

4.2.3. Building Permit Review

Ninyo & Moore reviewed building permits for the site at the City of Los Angeles Building Department (LABD). The oldest permit in the file was issued in 1914 for 1201 North Broadway to re-roof a residential structure. In 1931, a permit was issued for the addition of a paint department to the automobile sales and service building. In 1946 a

permit was issued for the addition to the garage building. Several tenant improvements for re-roofing, remodel pole signs, correction of a certificate of occupancy, and remodeling the showroom were on file from 1974 to 1997.

A permit was issued in 1922 for 1217-1219 North Broadway for additions to an existing apartment building. A demolition permit for the apartment building was dated 1963. A residential structure was re-built in 1923 on 1221 North Broadway. A demolition permit for this structure was 1962. A permit was issued in 1910 for 448 East Savoy Street for the construction of a garage.

4.2.4. City Directories

Ninyo & Moore reviewed city directory records at the Haines Criss-Cross Directory in Fullerton, California and the Sherman Gardens Library in Corona del Mar, California. Selected years of city directories, from 1955 to 2001, were reviewed for the site addresses along North Broadway and East Savoy Street. A summary of listings for the site is provided in below. Copies of the city directories are presented in Appendix B.

In general, the city directories indicated the presence of Domenich Basso, Inc. (an automobile dealership) at the site from 1955 through 2001, and two residential dwellings in the 1960 and 1955 directories. The site vicinity was historically a mix of residential and commercial properties. Listings for adjacent properties were generally residential and commercial business, such as retail warehousing and a school. No other facilities of concern in the vicinity of the site were noted on the city directories reviewed.

4.2.5. Interviews

Ninyo & Moore interviewed Mike Nickoloff, Vice President at Domenich Basso Inc. at the site. According to Mr. Nickoloff, the site has been in his family and used as an automobile dealership since in approximately 1924. According to Mr. Nickoloff, ASTs containing motor oil and transmission fluid are located in the service area. Waste oil and used antifreeze ASTs are located northwest of the bodyshop area. A three-stage clarifier

is present in the service area. A 1,000-gallon gasoline UST; and a 200-gallon waste oil UST were reported to have been removed in 1991 and 1993, respectively. Mr. Nickoloff had no knowledge of the 4 former USTs reported by O&S to have been removed from the site in 1968. The USTs, ASTs, and clarifier are discussed in Section 5 of this report.

According Mr. Nickoloff, the paint spray booth has not been in use for over ten years. Waste solvent from parts cleaning units and waste oil are removed by a licensed hazardous waste hauler. Copies of waste manifests are presented in Appendix B.

5. PROPERTY RECONNAISSANCE AND INVESTIGATION

On May 21, 2003, a representative of Ninyo & Moore conducted a site and vicinity reconnaissance. The reconnaissance involved a walking tour of the site, and visual observations of the site and adjoining properties. The following sections generally describe the site and site vicinity observed during our site reconnaissance. A visual reconnaissance was made of these properties from readily-accessible vantage points. Some features may have been concealed or obscured from view during our site reconnaissance.

5.1. Occupant's Hazardous Substance Usage

Hazardous materials and petroleum products such as motor oils, lubricants, antifreeze, and pain are used and stored at the site. Hazardous materials are utilized primarily in the service area.

5.2. Occupants' Hazardous Substance Storage and Disposal

5.2.1. Labeled Containers and Drums

Parts-washing stations, utilizing solvent, were noted in the service area. Minor staining was noted in the area of the parts-washing stations. Used batteries were reported to be recycled.

Several mobile drums used for oil changes and removing used antifreeze were observed in the service area. The mobile drums receive the used motor oil from automobiles during oil changes. The mobile drums are drained directly into the waste oil AST or the used antifreeze AST located outside the body shop in the northwestern portion of the site.

Several 15- and 55-gallon drums of new and used oil were observed in the air compressor room located in the northwest corner service area. Minor staining was noted near these containers.

Several containers of automotive paint, paint thinner, and building paint were noted to be stored in a room in the body shop area. Paint staining was noted on the concrete flooring within the paint storage room. A caution sign for the presence of acid was on this room, suggesting possible battery storage in the past.

Two labeled and covered 55-gallon drums are utilized to store used oil filters. The drums are located on wood pallets near the trash dumpster outside of the body shop near the waste oil UST. Minor staining was observed near the drums.

5.2.2. Unlabeled Containers and Drums

No evidence of unlabeled drums or containers was noted during our site reconnaissance.

5.2.3. Waste disposal and Storage Locations

No evidence of on-site disposal of waste materials was observed during our site reconnaissance. Storage of waste oil and waste antifreeze is discussed in Section 5.2.1 above.

5.2.4. Other Concerns

The service area contains ten subsurface hydraulic hoists. The associated piping and reservoirs for the hoists are also below ground. A rectangular depressed area was observed in the parking lot (Figure 2). The cause of this depression is unknown. One possibility is the removal of subsurface structures such as USTs.

5.3. Storage Tanks

5.3.1. Aboveground Storage Tanks (ASTs)

Five ASTs were observed during our site reconnaissance. A 1,000-gallon AST containing unleaded gasoline is located on the southeastern portion of the site and is equipped with secondary containment. A 300-gallon AST containing motor oil and a 120-gallon AST containing automatic transmission fluid are located in the service area. These AST were not equipped with secondary containment. A 250-gallon AST containing waste oil and a 150-gallon AST containing waste antifreeze were located on the northern portion of the site and were equipped with secondary containment. Minor staining was observed in the vicinity of each of the ASTs.

5.3.2. Underground Storage Tanks (USTs)

According to Mr. Nickoloff, a 1,000-gallon UST containing unleaded gasoline and a 200-gallon UST containing waste oil were located on the property from the late 1940s until 1991 and 1993 when the USTs were removed. Regulatory closure of the UST cases was received from the City of Los Angeles Fire Department on November 28, 2001. Currently there are no USTs reported to be located at the site. Mr. Nickoloff had no knowledge of the USTs reported by O&S to have been removed from the site in 1968.

5.3.3. Pits, Sumps, Drywells and Catchbasins

No pits, sumps, drywells or catchbasins were observed on-site. A three-stage clarifer was observed in the service area (Figure 2). The clarifier directly receives run-off from vehicle washing activities. Mr. Nickoloff reported that the clarifier is inspected and cleaned on a regular basis by an outside contractor. The concrete in the vicinity of the clarifier appeared in good condition. Mr. Nickoloff had no information pertaining to permitting or possible monitoring records.

5.4. Polychlorinated Biphenyls (PCBs)

Several pole-mounted transformers were noted along Broadway, and Savoy Street. No staining was observed in the vicinity of the transformers or on the ground beneath the transformers.

5.5. Asbestos-Containing Materials (ACMs)

Based on the construction date of the site building (1924), ACMs are expected to be present at the site.

5.6. Lead-Based Paint (LBP)

Based on the age of the buildings, LBP is expected to be present at the site.

5.7. Solid Waste Disposal

Trash dumpsters were noted on the northern portion of the site, near the body-shop area. No evidence of surface staining was noted in the vicinity of the dumpsters.

6. FINDINGS AND CONCLUSIONS

In the professional opinion of Ninyo & Moore, an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial customary practice in an effort to minimize liability, and the following Recognized Environmental Conditions (RECs) have been identified:

- Ten subsurface hydraulic lifts in the service area,
- A three-stage clarifier located in the service area,
- Areas of staining noted near the vicinity of the ASTs,
- Areas of staining noted in the paint storage area, and drum storage area (compressor room),
- Areas of staining noted in the vicinity of the parts cleaner,
- The inactive paint spray booth, and

- Four USTs reported to have been removed from the site in 1968.

The following recommendations are presented:

- A subsurface investigation should be conducted to document the condition of soil in the vicinity of the identified on-site sources of hazardous materials or petroleum products.

7. LIMITATIONS AND EXCEPTIONS OF THE ASSESSMENT

The opinions and recommendations presented in this report are based upon the results of a site reconnaissance and a review of available background information. The scope of this evaluation did not include subsurface exploration, soil or water sampling, or chemical analysis. Further assessment of possible adverse environmental impacts from past on-site activities and activities on surrounding facilities may be accomplished by a more comprehensive assessment, which would likely include excavation of on-site soil borings, soil sampling and analysis, installation of groundwater monitoring wells, lead-based paint testing, and asbestos testing.

The opinions presented herein apply to site conditions existing at the time of our Phase I Environmental Site Assessment, and cannot be taken to apply to site changes or conditions of which we are not aware and/or have not had the opportunity to evaluate.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding project information, or the content, interpretations presented, or completeness of this document.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. In the event conditions change from those described in this Phase I Environmental Site Assessment, Ninyo & Moore reserves the right to review such conditions and to modify, as appropriate, the assessments and conclusions provided in this report.

Subject: Phase II Subsurface Investigation
1201-1221 North Broadway and 442-448 East Savoy Street
Los Angeles, California

Dear Mr. Fain:

In accordance with your acceptance of our proposal on June 4, 2003, Ninyo & Moore has performed a Phase II Environmental Site Assessment at 1201-1221 North Broadway and 442-448 East Savoy Street in Los Angeles, California. The attached report presents our methodology, findings, conclusions, and recommendations regarding our assessment.

We appreciate the opportunity to be of service to you on this important project. Should you have any questions regarding this report, please contact the undersigned at your convenience.

Sincerely,
NINYO & MOORE

1. INTRODUCTION

In accordance with your request and authorization to proceed, Ninyo & Moore has performed a Phase II Subsurface Investigation at 1201-1221 North Broadway and 442-448 East Savoy Street (site) in Los Angeles, California. This report has been prepared in accordance with generally accepted environmental science and engineering practices. This report is based upon conditions at the subject site at the time of the sampling activities, and provides documentation of our findings and recommendations.

2. SITE INFORMATION

The following summary of site background information is based on the findings of Ninyo & Moore's June 4, 2003 Phase I Environmental Site Assessment (ESA) (Ninyo & Moore, 2003). Please refer to this report for additional information.

2.1. Site Description

The site consists of an automobile dealership on approximately one acre of land at 1201-1221 North Broadway and 442-448 East Savoy Street in the city of Los Angeles, Los Angeles County, California (Figure 1). The site building occupies approximately 26,000 square feet of floor space.

2.2. Phase I ESA Findings and Recommendations

The Phase I ESA report identified the following Recognized Environmental Conditions (RECs) at the site:

- Ten subsurface hydraulic lifts in the service area,
- A two-stage clarifier located in the service area,
- Areas of staining noted near the vicinity of the ASTs,
- Areas of staining noted in the paint storage area, and drum storage area (compressor room),
- Areas of staining noted in the vicinity of the parts cleaner,

- An inactive paint spray booth, and
- Four USTs reported to have been removed from the site in 1968.

The following recommendation was presented:

- A subsurface investigation should be conducted to document the condition of soil in the vicinity of the identified on-site sources of hazardous materials or petroleum products.

3. OBJECTIVE

The objective of the Phase II Subsurface Investigation was to assess whether petroleum hydrocarbons and other chemical constituents were present in the soil beneath the site in the vicinity of the recognized environmental conditions identified in the Phase I ESA.

4. SCOPE OF WORK

The scope of work for the Phase II Subsurface Investigation included the collection of soil samples; chemical analysis; preparations of a site plan showing subsurface chemical analysis results; and preparation of a report summarizing field activities, laboratory test results, and conclusions

5. SUBSURFACE INVESTIGATION

5.1. Soil Sampling

The soil borings were advanced and sampled on June 18 and 19, 2003 using direct-push methods (truck-mounted and limited access hydraulic push rig). Twenty-five soil borings were completed at the site to depths ranging from 10 to 20 feet below ground surface (bgs). The locations of borings are shown on Figure 2. Boring depths and soil sampling intervals were completed in accordance with our proposal dated June 4, 2003, verbal authorization from Johnson Fain to complete 3 additional borings on June 19, 2003, and included the following:

- Gasoline AST: Boring GAST was completed to a depth of approximately 15 feet bgs. Samples were collected at 5, 10, and 15 feet bgs.

- Motor Oil and Automatic Transmission Fluid ASTs: Boring MO1 was completed to a depth of approximately 15 feet bgs. Samples were collected at 5, 10, and 15 feet bgs.
- Waste Oil and Waste Antifreeze ASTs: Borings W01 and WO2 were completed to a depth of approximately 15 feet bgs. Samples were collected at 5, 10, and 15 feet bgs.
- Paint Storage Room and Paint Booth: Boring SR was completed adjacent to the Paint Storage Room and boring PB was completed adjacent to the Paint Boot to approximately 15 feet bgs. Samples were collected at 5, 10, and 15 feet bgs.
- Compressor Area: Boring CA, was completed to approximately 10 feet bgs with samples collected at 5 and 10 feet bgs.
- Parts Cleaner: Boring PC was completed to approximately 15 feet bgs with samples collected at 5, 10, and 15 feet bgs.
- Clarifier: Borings CL1 and CL2 were completed to depths of approximately 10 feet bgs at the clarifier area. Samples were collected at 5 and 10 feet bgs.
- Hydraulic Hoist: Borings HL1, HL2, HL3, HL5, HL6, HL7, HL8, HL9, and HL10 were completed to approximately 15 feet bgs with samples collected at 5, 10, and 15 feet bgs. Borings HL4 and HL11 were completed to approximately 20 feet bgs with samples collected at 5, 10, 15, 19, and 20 feet bgs.
- Depression Area: Boring DA was completed to a depth of approximately 20 feet bgs at the depression area. Samples were collected at 5, 10, 15, and 20 feet bgs.
- Former Gasoline UST: Borings SW1, SW2, and SW3 were completed to depths of approximately 20 feet bgs. Samples were collected at 5, 10, 15, 18, and 20 feet bgs.

Soil samples were collected in acetate liners, the ends of which were covered with Teflon sheets and capped with plastic caps. The samples were placed in a chest containing ice immediately after labeling. More detailed information on field procedures is included in Appendix A. Ninyo & Moore used a photoionization detector (PID) to screen soil samples in the field for volatile organic compounds (VOCs).

5.2. Subsurface Conditions

Logs of the soil borings are presented in Appendix B. Apparent fill soils consisting of mixtures of sand, silt, and clay were encountered from the surface to depths ranging from approximately 12 to 19 feet bgs. Sandy alluvium was encountered in some borings underly-

ing the fill soils. Sandstone of the Miocene age Puente Formation was encountered at depths of 15 and 19 feet bgs in three of the deeper borings. Groundwater was not encountered in any of the borings. The depth to first groundwater beneath the site is unknown. First groundwater is likely present within the rock of the Puente Formation at depths greater than 50 feet bgs.

5.3. Analytical Testing and Results

The soil samples were transported under chain-of-custody procedures to a State-certified laboratory for testing. Analytical testing and results of the soil samples are as follows:

- Gasoline AST: One sample from the boring was selected for analysis for total petroleum hydrocarbons with hydrocarbon chain identification (TPHcc) in general accordance with EPA Method No. 8015 (modified) and for volatile organic compounds (VOCs) in general accordance with EPA Method No. 8260B.

  No detectable TPH or VOC concentrations were reported.

- Motor Oil and Automatic Transmission Fluid ASTs: One sample from the boring was selected for analysis for TPHcc in general accordance with EPA Method No. 8015 (modified).

  No detectable TPH concentrations were reported.

- Waste Oil and Waste Antifreeze ASTs: One sample from each boring was selected for analysis for TPHcc in general accordance with EPA Method No. 8015 (modified), VOCs in general accordance with EPA Method No. 8260B, and Title 22 Metals in general accordance with EPA Method No. 6010/7000 series.

  No detectable TPH or VOC concentrations were reported. In addition, metal concentrations were below ten times the soluble threshold limit concentration (STLC) for the respective metals.

- Paint Storage Room and Paint Booth: One sample from each boring was selected for analyses for VOCs in general accordance with EPA Method No. 8260B. In addition, one sample from the boring at the paint storage room was tested for lead in general accordance with EPA Method No. 7240.

  No detectable concentrations of VOCs were reported. Concentrations of metals were below ten times the respective STLCs.

- Compressor Area: One sample from the boring was selected for analysis for TPHcc in general accordance with EPA Method No. 8015 (modified).

  A TPH concentration of 11 milligrams per kilogram (mg/kg) in the C23-C36 range was detected in the sample. No other TPH constituents were detected.

- Parts Cleaner: One sample from the boring was selected for analysis for TPHcc in general accordance with EPA Method No. 8015 (modified) and for VOCs in general accordance with EPA Method No. 8260B.

  No detectable TPH or VOC concentrations were reported.

- Clarifier: One sample from each boring was selected for analyses for TPHcc in general accordance with EPA Method No. 8015 (modified), for VOCs in general accordance with EPA Method No. 8260B, and for Title 22 metals in general accordance with EPA Method No. 6010/7000.

  No detectable TPH or VOC concentrations were reported except for a low concentration of TPH at 11 mg/kg in the C23-C36 range in sample CL1-10. All metal concentrations were below ten times the STLC for the respective metals.

- Hydraulic Hoists: Samples from the borings were selected for analysis for TPHcc in general accordance with EPA Method No. 8015 (modified).

  Samples from seven borings had no detectable THP concentrations. Samples HL3-10 and HL10-10 had low TPH concentrations, 10 mg/kg and 11 mg/kg respectively, in the C23-C36 range.

  Field indications (i.e., olfactory, visual, and PID readings) suggested that petroleum hydrocarbon impacted soil may be present between 15 and 20 feet in boring HL4. TPH in the C23-C36 range were detected at 21,000 mg/kg, 27,000 mg/kg, and 6,700 mg/kg in samples HL4-15, HL4-19, and HL4-20, respectively. An additional boring, HL11 was advanced approximately 5 feet to the southwest of boring HL4. No detectable TPH concentrations were reported in the soil sample collected from HL11.

  Concentrations of TPH in the C23-C36 range at 16,000 mg/kg were also detected in HL2-10.

- Depression Area: One sample from the boring was selected for analysis for TPH as gasoline (TPHg) and benzene, toluene, ethylbenzene, and total xylenes (BTEX) and methyl tertiary butyl ether (MTBE) in general accordance with EPA Method No. 8015/8020.

  No detectable concentrations of TPHg, BTEX, or MTBE were reported.

- Former Gasoline UST: Samples collected from the former gasoline UST location was selected for analyses for TPHg and BTEX and MTBE in general accordance with EPA Method No. 8015/8020.

  Field indications suggested that petroleum hydrocarbon impacted soil may be present at 20 feet in boring SW1. Based upon the field indications, two additional borings, SW2 and SW3 were advanced further to the southwest of SW1.

  TPHg was detected at 150 mg/kg, toluene at 22 micrograms/kilogram [µg/kg], ethylbenzene at 710 µg/kg, and xylene at 1,300 µg/kg sample SW1-20. TPHg was detected at 37 mg/kg, ethylbenzene at 160 µg/kg, and xylene at 280 µg/kg sample SW2-18. No detectable concentrations of TPHg, BTEX or MTBE were reported in sample SW3-20.

The analytical results are summarized in Tables 1 through 3 and the laboratory report is presented in Appendix C.

6. CONCLUSIONS

Laboratory results indicated TPH concentrations in the C23-C33 range of 6,700 mg/kg to 27,000 mg/kg in soil samples collected from borings HL2 and HL4. Based on the results of other samples collected in the vicinity of borings HL2 and HL4, and the apparent presence of rock formation at approximately 15 to 19 feet bgs, the extent of heavy petroleum hydrocarbons detected, appears to be limited to the immediate vicinity of the individual two hydraulic hoists.

Laboratory results also indicated concentrations of TPHg, toluene, ethylbenzene, and xylene in samples collected in the vicinity of the former gasoline UST. Based upon the results of soil samples collected adjacent to the former UST area from borings SW2 and SW3, and previous investigations conducted by others, the concentrations appear to be limited to the immediate area of the former UST. In addition, the concentrations of gasoline and its constituents detected are considered to be low, and would not, in our opinion, be of concern to a regulatory agency. Since the former UST was closed by the City of Los Angeles Fire Department, no further action regarding the former UST is warranted.

7. LIMITATIONS

The environmental services described in this report have been conducted in accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

Ninyo & Moore's conclusions regarding environmental conditions, as presented in this report, are based on limited subsurface assessment and chemical analysis. Further assessment of potential adverse environmental impacts from past on-site and/or nearby use of hazardous materials may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated; however, conditions can vary significantly between sampling locations. Variations in soil and/or groundwater conditions will exist beyond the points explored in this evaluation.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject site. The testing and analyses have been conducted by an independent laboratory which is accredited by the U.S. Environmental Protection Agency (EPA) or certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Our conclusions, recommendations and opinions are based on an analysis of the observed site conditions. It should be understood that the conditions of a site can change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

This report is intended exclusively for use by the client. Any use or reuse of the findings, conclusions and/or recommendations of this report by parties other than the client is undertaken at said parties' sole risk.

SOIL SAMPLING METHODOLOGY

SOIL SAMPLING METHODOLOGY

A direct-push sampling system (direct-push) was used to collect soil from beneath the site. The direct-push consists of a pick-up truck or four-wheeler-mounted hydraulic ram/pneumatic hammer system which pushes 4-foot-long, 1.25-inch-diameter rods. Soil samples are collected by attaching a 2-foot-long, 1.6-inch-diameter, stainless steel core sampler (Probe-Drive Sampler) to the bottom of the rods. Alternatively, a 4-foot-long, 2-inch-diameter Macro-core sampler can be attached to the bottom of the rods.

The Probe-Drive Sampler consists of the sampler, sample tube, a piston tip attached to a piston rod, a drive head and a piston stop pin. The sample tubes are placed in the sampler. The piston tip and attached piston rod are placed into the sampler from the bottom. The drive head is then screwed onto the top of the sampler. The piston stop-pin is screwed into the top of the drive head. The sampler is then attached to the 1-inch drive rods.

Undisturbed soil samples are collected by driving the sampler and rods to the target depth. The piston stop-pin prevents the piston tip and rod from rising into the sampler. Subsequently, the Probe-Drive Sampler remains completely sealed while it is pushed or driven to the desired sampling depth. Once the target depth is reached, the piston stop-pin is removed by means of extension rods inserted down the inside-diameter of the probe rods. The sampler is then pushed approximately 24 inches. As the sampler is pushed down, the piston tip and rod rise in the sampler on top of the intruding soil. The rods and sampler are then retrieved. The sampler is disassembled, the sample tubes removed for identification and analysis, and the apparatus decontaminated prior to reuse.

The Macro-core sampler consists of the sampler, cutting shoe, point assembly, drive head, sample sleeve, and (optional) sand catcher. Once assembled, the point assembly is placed in the cutting shoe and locked in place. The sample is then driven to the target depth. The point assembly is unlocked using extension rods lowered through the drive rods. The sampler is then driven another 4 feet. The sampler and drive rods are then retrieved, the sampler disassembled, and the sample tube removed for identification and analysis. The apparatus is then decontaminated prior to reuse.

Upon retrieval, the sample sleeves containing the soil samples are removed from the sampler, capped with Teflon sheets, and sealed with rubber end caps. The samples are then labelled, recorded on a chain-of-custody, and placed in cold storage pending delivery to the laboratory for analysis. All soil samples collected during the investigation were submitted to an independent state-certified laboratory for analysis.

Upon completion of the sampling the sampler and drive rods are removed and the boring is backfilled with hydrated bentonite and the surface is repaired to match existing grade.

HYDROCARBON CHAIN IDENTIFICATION				**EPA 8015B**		
RunID: GC2_030624A	QC Batch: E03VS142			PrepDate:		Analyst: **MFR**
T/R Hydrocarbons: C5-C12	ND	1.0		mg/Kg	1	6/24/2003

Qualifiers:

ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
B - Analyte detected in the associated Method Blank
DO - Surrogate Diluted Out
S - Spike/Surrogate outside of limits due to matrix interferen
H - Sample exceeded analytical holding time
E - Value above quantitation range
Results are wet unless otherwise specified

tert-Butylbenzene	ND	5.0		µg/Kg	1	6/24/2003
Tetrachloroethene	ND	5.0		µg/Kg	1	6/24/2003
Toluene	ND	5.0		µg/Kg	1	6/24/2003
trans-1,2-Dichloroethene	ND	5.0		µg/Kg	1	6/24/2003
Trichloroethene	ND	5.0		µg/Kg	1	6/24/2003
Trichlorofluoromethane	ND	5.0		µg/Kg	1	6/24/2003
Vinyl chloride	ND	5.0		µg/Kg	1	6/24/2003

Qualifiers:

ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
B - Analyte detected in the associated Method Blank
DO - Surrogate Diluted Out
S - Spike/Surrogate outside of limits due to matrix interferen
H - Sample exceeded analytical holding time
E - Value above quantitation range
Results are wet unless otherwise specified

MTBE	ND	5.0		µg/Kg	1	6/24/2003
o-Xylene	ND	5.0		µg/Kg	1	6/24/2003
Toluene	ND	5.0		µg/Kg	1	6/24/2003

Qualifiers:

- ND - Not Detected at the Reporting Limit
- J - Analyte detected below quantitation limits
- B - Analyte detected in the associated Method Blank
- DO - Surrogate Diluted Out
- S - Spike/Surrogate outside of limits due to matrix interferen
- H - Sample exceeded analytical holding time
- E - Value above quantitation range
- Results are wet unless otherwise specified

Subject: Asbestos and Lead-Based Paint Survey
1201-1221 North Broadway
and 442-448 E. Savoy Street
Los Angeles, California

Dear Mr. Fain:

In accordance with your authorization to proceed, Ninyo & Moore has performed an Asbestos and Lead-Based Paint Survey at 1201-1221 North Broadway and 442-448 East Savoy Street in Los Angeles, California. The attached report presents our methodology, findings, conclusions, and recommendations regarding our survey.

We appreciate the opportunity to be of service to you on this important project. Should you have any questions regarding this report, please contact me at your convenience.

Sincerely,
NINYO & MOORE

Dana E. Williams

1. INTRODUCTION

In accordance with your request and authorization to proceed, Ninyo & Moore has performed an asbestos survey and has coordinated the performance of a lead-based paint (LBP) survey at 1201-1221 North Broadway and 442-448 East Savoy Street in Los Angeles, California (Figure 1). This report has been prepared in accordance with generally accepted environmental science and engineering practices. This report is based upon conditions at the subject building at the time of the sampling activities and provides documentation of our findings and recommendations.

2. PURPOSE AND SCOPE OF SERVICES

The purpose of the survey was to evaluate the subject site for the presence of asbestos-containing materials (ACMs) and LBP. The objective of the survey was to gain information regarding site conditions to assist in proposed renovation activities at the site. Ninyo & Moore performed the following services:

- Performance of a visual reconnaissance of the readily accessible areas of the site to evaluate the possible presence of ACMs.
- Collection of 53 building material samples and submittal of these samples to an independent laboratory for analysis of asbestos content.
- Collection of 276 x-ray fluorescence (XRF) readings of potential LBP.
- Preparation of a site plan showing bulk sample locations.
- Preparation of this report summarizing our field activities, laboratory test results, conclusions, and recommendations.

3. SITE DESCRIPTION

The subject site consists of an automotive dealership totaling approximately 26,000 square feet. The building was a single-story, masonry and concrete structure, on a concrete foundation. Floors were covered with carpet, floor tile, or were bare concrete. Interior walls and ceilings were wood framed and covered with wood, plaster, or drywall. Drop ceiling panels were in office areas and the showroom ceiling was finished with acoustical plaster. Heating, ventilation, and air conditioning (HVAC) ducts were noted to be insulated with non-suspect fiberglass. The wood-

framed roof areas were covered with several layers composite shingles and built-up roofing material. The roof penetrations were coated with plastic roof cement.

4. PHYSICAL LIMITATIONS

Since non-destructive sampling techniques were used, there is a possibility that additional ACMs and LBPs may be encountered in inaccessible areas (e.g., interstitial wall spaces) during building renovation activities.

5. SAMPLE COLLECTION

On June 19, 2003, Ninyo & Moore personnel conducted an asbestos survey, and Barr & Clark was contracted to conduct a LBP survey of the site. The surveys followed United States Environmental Protection Agency (EPA) guidelines, within the limitations of the scope of this survey. The asbestos survey was performed by a California-Certified Asbestos Consultant and consisted of collecting building materials from the subject structures. The LBP survey was conducted by a California Certified Lead Paint Inspector/Assessor.

5.1. Asbestos Survey

A preliminary visual assessment and bulk-sampling survey of suspect ACMs was performed. Representative samples of the suspect ACMs were collected after identification of homogeneous sampling areas (areas in which the materials are uniform in color, texture, construction or application date, and general appearance). Each homogeneous area was observed for material type, location, condition, and friability. Representative samples were collected from each area except areas that were inaccessible, or areas of assumed ACM, within the limitations of the survey. Samples were collected using EPA-recommended sampling procedures. Building materials which were sampled and analyzed for the presence of asbestos are presented in Table 1. The locations of bulk asbestos samples are shown on Figure 2.

5.2. Paint Survey

To assess the painted surfaces portable XRF spectrum analyzer technologies were utilized. The survey was conducted in general accordance with accepted environmental science and engineering practices.

A total of 276 XRF readings were analyzed. The XRF results are in the LBP inspection report in Appendix B.

6. LABORATORY ANALYSES AND RESULTS

6.1. Asbestos Analysis

Fifty-three samples of suspect ACMs were collected and transferred to LA Testing. LA Testing is an accredited laboratory in the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos fiber analysis. The samples were analyzed using Polarized Light Microscopy with dispersion staining (PLM/Ds), for the presence and quantification of asbestos fibers, in general accordance with EPA Method 600/M4-82-020. The lower limit of reliable detection for asbestos using the PLM method is approximately 1 percent by volume. California regulations now define ACMs as those materials having an asbestos content of greater than one tenth of 1 percent (0.1%). Materials in which no asbestos was detected are defined in the laboratory report as "None detected." Materials containing asbestos, but in amounts less than 1 percent but greater than 0.1 percent, are defined as containing "trace" amounts. Building materials with an asbestos concentration greater than 0.1 percent are listed in Section 7 of this report. Suspect materials sampled and the analytical results are summarized in Table 1. A copy of the laboratory analytical report and chain-of-custody record is presented in Appendix A.

6.2. Paint Analysis

Currently, the State of California and the EPA stipulate what concentrations of lead in non-volatile components of surface coatings or materials determine a material to be a LBP. The California Department of Health Services (DHS) stipulates that materials containing an

amount equal to or in excess of 1 milligram per square centimeter (1.0 mg/cm^2), or more than half of one percent (0.5%) by weight, constitute a LBP. The HUD guideline for designating a painted surface as lead containing is consistent with the DHS. Paint that is chipping or peeling, or that may be removed from surfaces, and has a lead content equal to or greater than 1,000 milligrams per kilogram (mg/kg), would require handling as a California Title 22 hazardous waste. In addition, Los Angeles County Title 11 classifies LBP as a painted surface found to contain lead in concentrations greater than 0.7 mg/cm^2 or 600 mg/kg.

Because the site is located in the County of Los Angeles, positive readings of lead were levels above 0.7 mg/cm^2. Levels below 0.6 mg/cm^2 were considered negative or materials not containing lead.

7. FINDINGS AND OPINIONS

7.1. Asbestos

Based on the analytical results of bulk samples collected during this survey, ACMs located at the site are as follows:

- Approximately 1,000 square feet (SF) of maroon floor tile and mastic, containing 6 to 10 percent chrysotile asbestos, located in the sales office areas, observed to be in good condition.
- Approximately 3,500 SF of acoustical ceiling plaster, containing 8 to 10 percent chrysotile asbestos, located in the showroom, noted to be in good condition.
- Approximately 100 SF of window putty, containing 2 percent chrysotile asbestos, located on windows, noted to be in good condition.
- Approximately 20,000 SF of roofing material, containing 2 percent chrysotile asbestos, located on the showroom, new vehicle parking area, and service area roof, noted to be in good condition.
- Approximately 6,000 SF of roofing material, containing 3 percent chrysotile asbestos, located on the body shop roof, noted to be in good condition.
- Approximately 500 SF of plastic roof cement, assumed to be asbestos containing, located on roof penetrations, noted to be in good condition.

- Two transite flue pipes, one located near the gasoline aboveground storage tank and the other on the southwestern portion of the roof, assumed to be asbestos containing, noted to be in good condition.

Please note that quantities of ACMs are approximate. These numbers should be confirmed prior to removal or repair activities.

The presence of ACMs in a building does not necessarily mean that the health of the occupants is endangered. If these materials are in good condition and have not been disturbed or deteriorated, exposures are expected to be negligible. However, when ACM deteriorates, or is disturbed or is in damaged condition, such as during demolition operations, asbestos fibers may be released creating a potential health hazard for building occupants, maintenance personnel, and contractors.

7.2. Paint

Based on the analytical results of 276 XRF samples collected during our survey, the following painted surfaces contained concentrations of lead greater than 0.7 mg/cm^2:

Building Interior

- Brick walls – locker room, restrooms, and service area;
- Metal door – service area;
- Plaster walls and ceilings – restrooms, locker rooms, service area;
- Tile surfaces – offices and showroom;
- Wood baseboard – restroom;
- Wood cabinet components – service area;
- Wood door components – restrooms, parts department, service area;
- Wood handrail, railing, riser, and stringer – parts department, and service area; and
- Wood window components – parts department.

Building Exterior

- Metal bollard – north side;
- Metal door – west side;
- Metal downspout – south side;
- Metal window frame – south side; and
- Metal window sash – south side.

The presence of LBPs on the structure does not necessarily mean that the health of the occupants is endangered. If LBP is intact or in fair condition, and has not been disturbed or deteriorated, exposures are expected to be low. However, when LBPs are in a deteriorated condition, or are disturbed or damaged, such as during renovation, demolition or repair operations, lead dust may be released, creating a potential health hazard for building occupants, maintenance personnel, and contractors.

8. ABATEMENT ESTIMATE

Based upon the results of the ACM and LBP surveys, the following abatement and disposal estimate is provided:

ACM abatement	$40,000 to $60,000
LBP abatement	$45,000 to $60,000
Total	$85,000 to $120,000

The estimate is based upon our experience with similar projects, along with information provided by licensed abatement contractors. The estimate is provided for discussion purposes only.

9. RECOMMENDATIONS

Since ACMs and LBPs have been identified at the subject site, the following recommendations and precautions are provided:

- The identified ACMs should not be disturbed. Prior to renovation or demolition work which would disturb identified ACMs, a licensed asbestos abatement removal contractor should remove the ACMs.
- The identified LBPs should not be disturbed. Any LBPs in a non-intact condition should be abated and the component properly encapsulated. Prior to demolition work which would disturb identified LBPs, a licensed lead abatement removal contractor should remove the LBPs.
- Applicable laws and regulations should be followed, including those provisions requiring notification to building occupants, renovation contractors, and workers of the presence of asbestos and LBP.

10. LIMITATIONS

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited sampling and chemical analysis. Further assessment of potential adverse environmental impacts may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated. However, if additional suspect ACMs are encountered during demolition activities, these materials should be sampled by qualified personnel, and analyzed for content prior to further disturbance. In addition, please note that quantities of ACMs are approximate. These numbers should be confirmed prior to removal or repair activities.

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Our conclusions, recommendations and opinions are based on an analysis of the observed site conditions. It should be understood that the conditions of a site can change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

PLM has been known to miss asbestos in a small percentage of samples which contain asbestos. Negative PLM results cannot be guaranteed. Samples reported as <1% or none detected should be tested with TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval by LA Testing, Inc. The above test must not be used by the client to claim product endorsement by NVLAP nor any agency of the United States Government.

LEAD-BASED PAINT INSPECTION REPORT

1.0 INTRODUCTION

This report presents the results of Barr & Clark Environmental's lead-based paint (LBP) inspection of the Chrysler Dealership located at 1201 North Broadway, Los Angeles, California (Subject Property). This document is prepared for the sole use of Ninyo and Moore, and any regulatory agencies that are directly involved in this project. No other party should rely on the information contained herein without prior written consent of Ninyo and Moore. The scope of services, inspection methodology, and results are presented below.

2.0 SCOPE OF WORK

The purpose of this inspection is to identify and assess the Lead-Based Paint (LBP) present on painted components at the subject property.

On June 19, 2003, Barr & Clark performed an inspection for lead-based paint at the subject property in Los Angeles, California. To comply with EPA and HUD guidelines, painted and varnished surfaces in every accessible "room equivalent" were sampled for the presence of LBP. The intent was to ascertain the presence of lead-based paint above the federal action level. If LBP was found, the inspection would identify individual architectural components and their respective concentrations of lead in such a manner that this report would be used to characterize the presence of LBP at this property.

3.0 PROPERTY DESCRIPTION

The subject property is a car dealership that was built circa 1940. It is a one-story building that is constructed over a slab foundation. The exterior walls are covered with stucco / concrete and the windows are a combination of fixed and transom types. At the time of this inspection, most of the painted surfaces were in good condition.

4.0 INSPECTOR'S QUALIFICATIONS

Alex Romani of Barr & Clark performed the inspection at the site using an RMD LPA-1 XRF spectrum analyzer instrument. He has attended the radiation safety course for handling the instrument, and completed an EPA approved curriculum in Lead in Construction Inspector / Risk Assessor Training.

At the time of this report, the California Department of Health Services, Childhood Lead Poisoning Branch, has implemented a State Certification Model Accreditation Plan adopted from the EPA. Alex Romani has received certification. Personnel certificate(s) have been provided in ***Appendix C.***

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

5.0 TESTING PROTOCOL

XRF Testing: Testing of the painted surfaces was patterned after the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing[i]. In every "room equivalent" within the tested property, one representative surface of each "testing combination" was tested. Multiple readings were collected to resolve inconsistencies in the test results.

Regulatory Compliance: Several public (government) agencies have a published "regulatory action level" to classify LBP. To further complicate matters, some of the established "levels" are quantified in different units of measurement. Listed below are the current regulatory agencies that have defined LBP, along with the respective action level:

Agency	Ordinance #	Action level (mg / cm^2)	Action level (ppm[ii])
HUD / EPA	24 CFR 35.86 & 40 CFR 745.103	1.0 mg / cm^2	5,000 ppm
L.A. County	Title 11, 11.28.010	0.7 mg / cm^2	600 ppm[iii]
OSHA / CAL OSHA	29 CFR 1926.62 & Title 8, 1532.1	*Not Specified*	600 ppm[iv]

HUD / EPA have recently issued the following guidance regarding units of measurement for paint samples:

"Report lead paint amounts in mg/cm^2 because this unit of measurement does not depend on the number of layers of non-lead-based paint and can usually be obtained without damaging the painted surface. All measurements of lead in paint should be in mg/cm^2, unless the surface area cannot be measured or if all paint cannot be removed from the measured surface area. In such cases, concentrations may be reported in weight percent (%) or parts per million by weight (ppm)."[v]

Furthermore, EPA has previously issued guidance on lead content classification as follows:

"... The rule, at 24 CFR 35.86 and 40 CFR 745.103 states that a lead-based paint free finding must demonstrate that the building is free of 'paint or other surface coatings that contain lead in excess of 1.0 milligrams per square centimeter *(1.0 mg / cm^2)* or 0.5 percent by weight *(5000 ppm)*.' The State standards are not applicable, whether more or less stringent, since a State cannot amend Federal requirements."[vi]

In recognition of the various action levels the testing results are classified as follows for this report:

- Painted surfaces with readings at or above 0.7 mg / cm^2 are considered - Positive
- Painted surfaces with readings at or below 0.6 mg / cm^2 are considered - Negative

The individual readings have been provided on all field data sheets. Any future change in action levels by one of the regulating agencies may affect the classification of results.

6.0 METHOD OF TESTING

Paint Testing: The method employed was X-ray fluorescence (XRF) using a Radiation Monitoring Device Lead Paint Analyzer (RMD LPA-1). The instrument was operated in "Quick Mode," where the duration for each test result is determined by a combination of:

- the actual reading relative to the designated action level;
- the age of the radioactive source; and
- the substrate on which the test was taken.

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

The instrument's calibration was verified according to the manufacturer's specifications in compliance with the Performance Characteristic Sheet (PCS) developed for this instrument.

The readings from this instrument produce a 95% confidence level that the "lead" reading accurately reflects the actual level of lead in the tested surfaces, relative to the federal action level.

7.0 SUMMARY OF RESULTS

Paint Sampling: Throughout the subject property, several of the painted components indicated the presence of lead-based paint (LBP) at or above the action level. The following summary lists the specific components that tested above the action level and their respective locations:

Interior

- Showroom Restroom – door
- Private Restroom Near Office 1 – door components and walls in toilet area
- Service Area – metal door (large sliding), cabinet components, walls, garage door components, stringer and handrail
- Customer Restroom – walls, baseboards and ceiling
- Customer Lounge – door frame
- Parts Department – door frame, window components, closet door frame, riser, stringer and railing
- Mechanic's Room – door frame and walls
- Locker Room – plaster wall and brick wall

Exterior

- Metal door on west side
- Window components
- Downspouts
- Bollards

Some of the tiled surfaces throughout the building also tested positive for lead. These surfaces were not painted and the lead is most likely in the glazing or the matrix of the tile itself.

Sampling for this inspection was representative and any components that were not tested but similar to those components that tested positive for LBP should be considered and treated as lead laden.

The field data and results for paint sampling may be found in ***Appendices A - B.***

BARR & CLARK • 22850 Crenshaw Blvd., • Suite 200 • Torrance, California 90505 • (310) 517-0805 • Fax: (310) 517-0822

8.0 RECOMMENDATIONS

The greatest potential for lead exposure from lead painted architectural components occurs when:

- the paint has become defective; or
- when the paint is applied to a friction / impact component where the paint is continually disturbed; or
- when the paint is disturbed through routine maintenance or renovation activities.

With this in mind, the following are our recommendations for this property:

- The results from this inspection should be provided to any individuals that may disturb the painted surfaces. It is encouraged to utilize professionals that have experience working with LBP.
- If renovation is scheduled in the near future (less than three months), all lead painted components that have been previously targeted for replacement should be replaced utilizing "lead safe" containment and work practices.
- ALL components that have been identified with defective lead paint should have the paint repaired as soon as possible. Any paint repair should be done utilizing "lead safe" containment, work practices, and clean-up techniques.
- All components with lead painted friction / impact surfaces should be treated to minimize the friction or impact as necessary.
- Lead painted components that **have not** been targeted for replacement should either be considered for abatement (replacement, enclosure, encapsulation, etc.) or included in an Operations & Management (O & M) Plan that will help to minimize exposures to lead hazards.
- All lead painted surfaces that are not expected to be impacted in the near future (less than three months) should also be included the O & M plan.
- In addition, the tenants or occupants of the dwelling should be notified of the test results and instructed in actions that they may perform to keep the living areas "lead safe."
- The tile surfaces are not a likely source of lead dust contamination as long as they remain intact. If future renovation or repair activities require that the tile be removed, or the surfaces disturbed, it should be done in a manner that does not break the tiles. If this is not feasible, this task should be assigned to a lead certified contractor.

9.0 TITLE X REQUIREMENTS

A copy (or summary) of this report must be provided to new lessees (tenants) and purchasers of this property under Federal law (24 CFR part 35 and 40 CFR part 745) before they become obligated under a lease or sales contract. The complete report must also be provided to new purchasers and it must be made available to new tenants. Landlords (lessors) and sellers are also required to distribute an educational pamphlet approved by the U.S. Environmental Protection Agency and include standard warning language in their leases or sales contracts to ensure that parents have the information they need to protect their children from lead-based paint hazards. This report should be maintained and updated as a permanent maintenance record for this property.

10.0 INSPECTION LIMITATIONS

This inspection was planned, developed, and implemented based on Barr & Clark's previous experience in performing lead-based paint inspections. This inspection was patterned after Chapter 7 of the *HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997 Revision).* Barr & Clark utilized state-of-the-art-practices and techniques in accordance with regulatory standards while performing this inspection. Barr & Clark's evaluation of the relative risk of exposure to lead identified during this inspection is based on conditions observed at the time of the inspection. Barr & Clark cannot be responsible for changing conditions that may alter the relative exposure risk or for future changes in accepted methodology. Enclosed are the diagram(s), actual test results, and all relevant certifications and licenses.

L.A. County DHS action level for lead paint is 0.7 mg/cm2.
Positive is defined as XRF sampling with levels at or above 0.7 mg/cm2.

Interior Lead Containing Components List

Project Name: Chrysler Dealership
Address: 1201 North Broadway
Los Angeles, CA

Project ID: 230650

Sample	Side	Testing Combination	Room Equivalent	Lead	Results	Condition	Comments
108	W	Tile Baseboard	Office 9	9.7	POSITIVE	Intact	
116	N	Tile Baseboard	Private Restroom Near Office 1	19.0	POSITIVE	Intact	
9	S	Tile Baseboard	Showroom	15.0	POSITIVE	Intact	
12	E	Tile Wall	Showroom	18.0	POSITIVE	Intact	
11	N	Tile Wall	Showroom	20.0	POSITIVE	Intact	
13	S	Tile Wall	Showroom	24.0	POSITIVE	Intact	
4	E	Tile Window Sill	Showroom	22.0	POSITIVE	Intact	Fixed
159	W	Wood Baseboard	Customer Restroom	0.7	POSITIVE	Intact	
127	E	Wood Cabinet Door	Service Area	4.3	POSITIVE	Intact	
126	E	Wood Cabinet Frame	Service Area	0.9	POSITIVE	Intact	
184	N	Wood Closet Door Frame	Parts Department	1.1	POSITIVE	Intact	
117	W	Wood Door	Private Restroom Near Office 1	0.9	POSITIVE	Intact	To Toilet Area
21	E	Wood Door	Showroom Restroom	1.0	POSITIVE	Intact	
163	W	Wood Door Frame	Customer Lounge	1.5	POSITIVE	Intact	
218	N	Wood Door Frame	Mechanic's Restroom	1.4	POSITIVE	Intact	
180	W	Wood Door Frame	Parts Department	0.9	POSITIVE	Intact	
111	N	Wood Door Frame	Private Restroom Near Office 1	1.2	POSITIVE	Intact	
118	W	Wood Door Frame	Private Restroom Near Office 1	1.0	POSITIVE	Intact	To Toilet Area
136	S	Wood Garage Door	Service Area	0.7	POSITIVE	Intact	
137	S	Wood Garage Door Frame	Service Area	1.3	POSITIVE	Intact	
145	E	Wood Handrail	Service Area	1.0	POSITIVE	Intact	

L.A. County DHS action level for lead paint is 0.7 mg/cm2.
Positive is defined as XRF sampling with levels at or above 0.7 mg/cm2.

Interior Lead Containing Components List

Project Name: Chrysler Dealership
Address: 1201 North Broadway
Los Angeles, CA

Project ID: 230650

Sample	Side	Testing Combination	Room Equivalent	Lead	Results	Condition	Comments
203	W	Wood Railing	Parts Department	0.7	POSITIVE	DAMAGED	Top of Stairs
200	W	Wood Riser	Parts Department	0.7	POSITIVE	DAMAGED	Upstairs Storage Area
201	W	Wood Stringer	Parts Department	1.5	POSITIVE	DAMAGED	Upstairs Storage Area
144	E	Wood Stringer	Service Area	0.9	POSITIVE	Intact	
182	W	Wood Window Frame	Parts Department	1.0	POSITIVE	Intact	Transom
181	W	Wood Window Sash	Parts Department	0.7	POSITIVE	Intact	Transom

L.A. County DHS action level for lead paint is 0.7 mg/cm2.
Positive is defined as XRF sampling with levels at or above 0.7 mg/cm2.

Exterior Lead Containing Components List

Project Name: Chrysler Dealership
Address: 1201 North Broadway
Los Angeles, CA

Project ID: 230650

Sample	Side	Testing Combination	Room Equivalent	Lead	Results	Condition	Comments
275	N	Metal Bollard	Perimeter North Side	1.5	POSITIVE	Intact	
276	N	Metal Bollard	Perimeter North Side	3.4	POSITIVE	Intact	
251	W	Metal Door	Perimeter West Side	8.5	POSITIVE	DAMAGED	
256	S	Metal Downspout	Perimeter South Side	0.7	POSITIVE	Intact	
257	S	Metal Downspout	Perimeter South Side	0.9	POSITIVE	Intact	
253	S	Metal Window Frame	Perimeter South Side	5.9	POSITIVE	Intact	Transom
252	S	Metal Window Sash	Perimeter South Side	7.0	POSITIVE	Intact	Transom

L.A. County DHS action level for lead paint is 0.7 mg/cm2.
Positive is defined as XRF sampling with levels at or above 0.7 mg/cm2.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Exclusive Recovered Govt. Archives

RGA LF Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 11/14/2018 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 24 ENVIROSTOR sites within approximately 1 mile of the target property.

CA FID UST: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, and dated 10/31/1994 has revealed that there are 7 CA FID UST sites within approximately 0.25 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 09/04/2018 has revealed that there are 2 DEED sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

SO CAL GAS/ALISO D M	CESAR CHAVEZ AND LYO	SSE 1/2 - 1 (0.854 mi.)	70	338

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GINSBURG NAFTUHN	1322 N BROADWAY	ENE 0 - 1/8 (0.105 mi.)	D11	24

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110000473283

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002756376

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern:	Not reported
Site History:	Parcel PA-018 is located at the intersection of North Spring Street and College Street in the City of Los Angeles, and across the street from the Metro Chinatown Station. The Site was previously owned by Union Pacific Railroad Company and at present is owned by the Los Angeles to Pasadena Metro Blue Line Construction Authority (Authority). The Site is about 6 acres and is surrounded by industrial and commercial use land. Historically the Site has been used for a wood and coal yard, an oil warehouse, dwellings, and for small businesses. Since 1905 it was used as a rail freight yard, but it has been vacant since about 1970. Buildings at the Site were demolished in the late 1980s. A gasoline tank was removed in April 1987 with no evidence of leakage. Reports from 1989 indicate that the Site was used for the storage of tanks and shipping containers. Several water-bearing zones underlie the Site, but there are no production wells within one mile of the property. The shallow semi-perched zone is about 30 ft below ground surface, and the groundwater flow direction is in a south-southwest direction. Groundwater in the southwestern portion of the Site has been impacted by heavy-end hydrocarbons (diesel-range and total recoverable petroleum hydrocarbons). Based on regional groundwater flow and documented historic service station operations at neighboring off-site properties, the groundwater contamination appears to be from off-site sources. The Site is planned for development of a four-story building, with commercial, retail business on the lower level, and housing on the other three floors. There are no planned underground structures, green areas, or unpaved areas at the Site.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: Yes

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 132
. Waste name: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	Yes

. Waste code:	123
. Waste name:	Unspecified alkaline solution

MAIN STREET CENTER (Continued) **1000102032**

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 132
. Waste name: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 342
. Waste name: Organic liquids with metals (see 121)

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D005
. Waste name: BARIUM

MAIN STREET CENTER (Continued) **1000102032**

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Biennial Reports:

Last Biennial Reporting Year: 2017

MAIN STREET CENTER (Continued) **1000102032**

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	23276.7
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	10688
Waste code:	D004
Waste name:	ARSENIC
Amount (Lbs):	52

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/04/2001
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/02/1995
Comments: The Department completed review of the PEA report. Based on the

SO CAL GAS/LA MAIN ST MGP (Continued) **S101297113**

information provided in the PEA, the site does not constitute an immediate threat that would require an expedited response action. However, DTSC recommends furthe action, in that the current asphalt must be maintained and a deed restriction notification be placed on the site. DTSC considers the PEA complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/28/1993
Comments: The Department received a notice of intent to initiate a PEA dated September 27, 1993. Manufactured Gas Plant (MGP) was operated at the site from approximately 1906 to 1919??? The MGP operations ceased at the site on 1919? when the Southern California Gas Company acquired the MGP properties. In 1922 Los Angeles City Water and Power acquired the property and dismantled the gas plant. The hazardous wastes found at the former MGP sites includes PAHs, Cyanides, TPHs, BTEX, Sulphides/sulfates, and Metals. Due to the evidence of hazardous wastes in the other MGP sites, the Department recommends a PEA. The Department completed review of the sampling plan. RP is investigating the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 11/27/2004
Comments: DTSC recommended to revise the Sampling Plan and prepare Quality Assurance Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 01/25/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 03/11/2015
Comments: This former MGP project was a very small portion of the bigger LADWP RCRA site. The Gas Co. completed investigation and sent a letter. VCA was terminated in 2008. DTSC staff are working on the LADWP RCRA site.

Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	05/02/1995
Comments:	The Department completed review of the PEA report. Based on the information provided in the PEA, the site does not constitute an immediate threat that would require an expedited response action. However, DTSC recommends furthe action, in that the current asphalt must be maintained and a deed restriction notification be placed on the site. DTSC considers the PEA complete.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	10/28/1993
Comments:	The Department received a notice of intent to initiate a PEA dated September 27, 1993. Manufactured Gas Plant (MGP) was operated at the site from approximately 1906 to 1919??? The MGP operations ceased at the site on 1919? when the Southern California Gas Company acquired the MGP properties. In 1922 Los Angeles City Water and Power acquired the property and dismantled the gas plant. The hazardous wastes found at the former MGP sites includes PAHs, Cyanides, TPHs, BTEX, Sulphides/sulfates, and Metals. Due to the evidence of hazardous wastes in the other MGP sites, the Department recommends a PEA. The Department completed review of the sampling plan. RP is investigating the site.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	11/27/2004
Comments:	DTSC recommended to revise the Sampling Plan and prepare Quality Assurance Plan.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	01/25/2008
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Other Report
Completed Date:	03/11/2015
Comments:	This former MGP project was a very small portion of the bigger LADWP RCRA site. The Gas Co. completed investigation and sent a letter. VCA was terminated in 2008. DTSC staff are working on the LADWP RCRA site. Not reported

CA BOND EXP. PLAN:

Reponsible Party:	DETAILED SITE EXPENDITURE PLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The responsible parties have been found to be in noncompliance with an order issued by the Department. Therefore, it will be necessary to utilize Bond funds to remediate this site. DHS will undertake appropriate cost recovery actions. This has not been identified as a NPL site, nor does it appear, to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.
Site Description:	Bortz Oil was a petroleum products blending and packaging facility. The packaging warehouse was destroyed by fire in 1984. During reconstruction, pervasive subsurface contamination was detected. The site now operates only as a warehouse for storage of chemical products.
Hazardous Waste Desc:	Subsurface exploration has revealed that the soil and ground water are contaminated with acetone, toluene, xylene, benzene, methyl ethyl ketone (MEK), methylene chloride and 1,2-dichloroethane (DCE).
Threat To Public Health & Env:	Major routes of concern for human and animal exposure are soils, surface water and ground water. The Los Angeles River Channel is 100 feet from the site. Contamination of the soil and ground water was documented in January, 1986. The shallow and deeper aquifers are believed to be hydraulically connected. Soil gas vapors could pose an explosive threat; no threat has been identified to date.
Site Activity Status:	A remedial action order was issued April 13, 1987 directing the RPs to mitigate the site. A remedial investigation work plan was submitted and approved with modifications by DHS. Implementation of the remedial investigation commenced August 10, 1987. Routine monitoring of the ground water monitoring wells and

BORTZ OIL COMPANY (Continued) **S105960450**

vapor collection system is being conducted. The responsible parties were found in non-compliance with the order on April 28, 1988. Completion of the RI/FS is projected for January, 1990.

Completed Document Type: Land Use Restriction
Completed Date: 08/19/2002
Comments: A deed restriction to restrict use of the property was recorded on August 19, 2002. The deed restriction prohibits sensitive uses of the property including, but not limited to residential, hospital, public or private school uses for persons under 21 years of age, and daycare uses for children.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 06/30/2000
Comments: DTSC approves the Soil Removal Action Workplan (RAW) for the former Bortz Oil site. Bortz will implement a soil vapor extraction technology to achieve the remedial goals set forth in the RAW. DTSC has determined and filed a CEQA Notice of Exemption for the Site. The Removal Action Workplan (RAW) for the above site was approved on June 30, 2000. As indicated in the RAW, Soil Vapor Extraction will be implemented at the area designated as AOPC-2.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	10/17/2014
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	01/28/2014
Comments:	The final NOE was forwarded to Sacramento CEQA for submittal to the State Clearinghouse.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	* Cost Recovery Settlements/Decrees
Completed Date:	12/08/2004
Comments:	DTSC signed an acceptance of Allowance of Creditors Claim with the Bortz Estate in December 8th, 2004. The Estate settled past costs.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Consent Order
Completed Date:	12/21/1998
Comments:	Transition to Chapter 6.5. Amendment to the existing Consent Order No. 86/87-039RA signed by the RP.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction
Completed Date:	08/19/2002
Comments:	A deed restriction to restrict use of the property was recorded on August 19, 2002. The deed restriction prohibits sensitive uses of the property including, but not limited to residential, hospital, public or private school uses for persons under 21 years of age, and daycare uses for children.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	06/30/2000
Comments:	DTSC approves the Soil Removal Action Workplan (RAW) for the former Bortz Oil site. Bortz will implement a soil vapor extraction technology to achieve the remedial goals set forth in the RAW. DTSC has determined and filed a CEQA Notice of Exemption for the Site. The Removal Action Workplan (RAW) for the above site was approved on June 30, 2000. As indicated in the RAW, Soil Vapor Extraction will be implemented at the area designated as AOPC-2.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Initial Study/ Neg. Declaration
Completed Date:	08/02/1996
Comments:	DTSC approves the Removal Action Workplan and Neg. Dec. for Bortz Oil-Spring Street property. The Removal Action involves removal of above-ground tanks and structures.

Alternate Address:	1746 NORTH SPRING STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90012
Background Info:	The Bortz Oil Company (BOC) was a petroleum products blending and packaging facility. The site produced various petroleum products (i.e. kerosene, paint, acetone, methyl ethyl ketone (MEK),lacquer thinners, and denatured alcohol). High levels of hydrocarbons and chlorinated solvents have been identified in the soil, while 1,1-dichloroethane (DCE), vinyl chloride, petroleum hydrocarbons, and benzene have been detected in the groundwater. On August 9, 1984, a fire broke out in one of the metal and concrete warehouse facilities on the North Spring Street property. Undetermined amounts of chemicals were consumed by the fire and spilled on the ground, which has since percolated into the soil. The Department's inspection in December 1985, and January 1986, revealed that there were numerous uncontrolled chemical spills, leaking valves and drums, and illegal disposal of chemicals at the site. Since the groundwater is not being used as a drinking water source, the potential impact of the contaminated groundwater is not an immediate concern. The groundwater investigation will be conducted after the Spring Street

BORTZ OIL COMPANY (Continued) **S100833375**

property is sold. Direct contact with the contaminated soil, inhalation, and dermal absorption are the potential routes of exposure.
On April 14, 1987, the Department issued a Remedial Action Order (RAO) to BOC to develop and implement the Remedial Investigation/Feasibility Study (RI/FS), Remedial Action Plan (RAP) and remediation. On July 6, 1988, the RAO was modified to include additional property (1726 N. Naud Street) owned by (BOC). Although remedial activities have been slowed due to the death of the owner in March 1990 the Department approved the Focused Feasibility Study Report for the Naud Street property. The Probate Court has determined that BOC's assets will be used towards the remediation of the Naud Street Property. On October 23, 1992, the Dept. negotiated a Consent Order with the Executor of the BOC estate.
In August 1996, DTSC completed a removal action on the North Spring Street property. Bortz removed above-ground tanks and structures and near surface piping.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Universal Waste Summary:
Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: Yes

Historical Generators:
Date form received by agency: 03/22/2002
Site name: TRUFLEX RUBBER
Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D018
. Waste name: BENZENE

TRU-FLEX RUBBER PRODUCTS CO. (Continued) **1000229617**

. Waste code: D021
. Waste name: CHLOROBENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: D040
. Waste name: TRICHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Completed Document Type: * Discovery
Completed Date: 10/22/1982
Comments: Known as the I T E Circuit Breaker Company, Inc: facility identified from L.A. Chamber of Commerce Directory 1963-1964. Electrical Distribution Equipment. On 05/31/1983, a facility drive-by was conducted. Now Truflex Rubber. Office in front; no waste visible from rear.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/30/1993
Comments: The Department received a complaint dated December 29, 1992 relates to alleged unlawful disposal or releases of hazard- ous wastes and hazardous substances, including PCE, TCE, 1,1,1-TCA and toluene at the site and neighboring property. Due to the evidience of on-site contamination, the Dept recommends a PEA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Completed Document Type: Removal Action Completion Report
Completed Date: 03/11/2002
Comments: DTSC reviewed and approved the "Implementation Report" for the Removal Action that took place South of Cardinal Street.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 04/18/2000
Comments: CEQA: DTSC approved the Negative Declaration for the William Mead Homes site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment/Site Inspection Report (PA/SI)
Completed Date: 04/22/1994
Comments: A PEA consisting of field sampling and analysis identified the presence of elevated levels of polycyclic aromatic hydrocarbons (PAHs) and heavy metals in the soil in various areas of the site. Further action is warranted. The PEA is considered complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Alternate Address:	1300 CARDINAL STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90012

WILLIAM MEAD HOMES (Continued) **S101482998**

Background Info:	This site south of Cardinal Street previously operated as a refinery from 1900 - 1924 by the Southern Refining Company and Amalgamated Oil Company. Not reported Historical documents indicated refining equipment and above ground storage tanks (AGST). Dark oily materials were discovered during construction activities in the playground area. Areas were covered to prevent contact with potential contaminants. DTSC entered into a Voluntary Cleanup Program Agreement with the RP for oversight of a Preliminary Endangerment Assessment. Not reported AREA NORTH OF CARDINAL STREET This Site is divided into two areas, the area South of Cardinal Street is designated by the letter "S" following the commitment description, and the DTSC LEAD ACTIVITIES area North of Cardial Street is designated by the letter "N" following each description.

Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/16/1995
Comments: DTSC entered into a Voluntary Cleanup Agreement with Witco Corporation to complete a Preliminary Endangerment Assessment (PEA) for the Witco Corporation site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/24/1995
Comments: DTSC completed its review of the PEA Report for the Witco Corporation, Allied Kelite Division Site. Based on the information provided, DTSC determined that the residual contamination observed in the Site's soil does not pose a threat to human health via the inhalation and ingestion routes of exposure. Accordingly, DTSC concurs with the "No Further Action" recommendation for the soil with respect to the aforementioned routes of exposure. DTSC has determined that the groundwater beneath the Site has been impacted by Site operations and possibly other regional sources. The groundwater beneath the Site is not a potable source of drinking water and does not pose an imminent and substantial endangerment. However, the groundwater should be investigated. DTSC reserves the right to require additional work in the future should the Site's conditions differ from those described in the PEA

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Background Info: The Naval and Marine Corps Reserve Center, Los Angeles (NMCRC-LA) consists of approximately 6 acres of land, approximately 1 mile northeast of downtown Los Angeles. This site is a closed reserve center where Naval or Marine Corps activities are no longer cond ucted. NMCRC-LA was constructed from 1938 to 1940 by the Works Progress Administration and was commissioned in 1940 to provide a dministrative, training, and logistics support to reserve units. The facility has one Installation Restoration site, identified as Site 1, the former Service Station and Vehicle Lube Rack. The former service Station was built in 1943 and was used for fuelin g vehicles on site. The aboveground portion of the station has be en removed. Adjacent to the former Service Station, the Vehicle L ube Rack was used for vehicle maintenance and drained directly to a waste of oil underground storage tank(UST). Between 1987 to 19 89, hazardous substances (including used oil, solvents, hydraulic , fluid, and other new and used vehicle maintenance products) wer e stored in 55-gallon drums on the Vehicl Lube Rack. In Novembe r 1994, the waste oil UST was removed in 1994 under supervision o f the Los Angeles Fire Department. Soil with detected levels of total recoverable petroleum hydrocarbons was excavated and dispos ed off site. In 1995, an Environmental Baseline Study (EBS) was conducted. The EBS identified the Vehicle Lube Rack and the form er Service Station gasoline UST as areas requiring further invest igation. In 1996, a subsurface soil investigation conducted for Site 1 indicated the presence of gasoline-range hydrocarbons, be nzene, toluene, ethylbenzene, total xylenes, and 1,2-dichloroetha ne.

LOS ANGELES NAVAL & MARINE CORPS RES.CEN (Continued) **S102815066**

LOC Case Number:	300784
File Location:	Regional Board
Potential Media Affect:	Aquifer used for drinking water supply, Soil
EDR Link ID:	T0603714859
Potential Contaminants of Concern:	Dichloroethane (DCA), Benzene, Gasoline, Total Petroleum Hydrocarbons (TPH)
Site History:	The Installation Restoration (IR) Site 1 at Naval and Marine Corps Reserve Center - Los Angeles (NMCRC-LA) consists of a former service station and vehicle lube rack area. The site located on approximately six acres of land, about 1 mile northeast of downtown Los Angeles, and is currently used by the City of Los Angeles Fire Department for training purpose. The former gasoline UST and the presence of several drums of unknown waste at the lube rack are potential historical sources of contamination at the site. Contaminated subsurface soils and groundwater below the area of concern are potential current sources of contamination. Type of contaminants identified in soil and groundwater consisted primarily of petroleum hydrocarbons in gasoline and diesel ranges. Analytical results from site investigations identified subsurface soils in the 15 to 25 feet below ground surface (bgs) depths as the soil strata of greatest contamination. Depth to water is approximately 30 feet bgs. The risk to human health from exposure to soil and groundwater is below the level of concern. Currently there is no drinking water wells on the property or within 1-mile radius in the area. The nearest well is located about 3 miles north of the site, which is upgradient to the source area. Groundwater data collected from the site showed steady decrease trends.

EMPIRE CHEMICAL COMPANY (Continued) **U001561274**

Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/15/1994
Comments: The Department received a Notice of Intent to Commence Action Under RCRA and CERCLA dated June 22, 1993. On July 30, 1993, the Department mailed the Information Request to all PRPs. The information received from the PRPs indicates that in 1945 the Empire Chemical Co. moved to the subject location. The current owner is Jerry Elkind. The company was involved in the sale of janitorial products and insecticides. It did some packing in the permises as part of their operation. One 5000-gallon UST was installed in 1947-1950 to store kerosene. Soil around the area of of the UST is contaminated with TPH and the groundwater is also suspected to be contaminated. The Department's contact with the Los Angeles City Fire Department, UG Tank Plan Check indicates that they are the lead agency. Therefore, the Department's involvement is unnecessary.

Completed Date: 03/16/1994
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge

VICTOR INDUSTRIAL BATTERY (Continued) **S105689620**

of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The "Subsurface Investigation Report" indicates that the maximum concentration of lead in the soil is 30,000 mg/kg and minimum pH is 0.48. RP has not been compiled with the County's directives. Therefore, the site was referred to the Department. Due to the evidence of onsite contamination, the Department recommends a PEA. The RP will be notified of this recommendation.

Manufactured Gas Plants:

The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide,polycyclic aromatic hydrocarbons and heavy metals

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/12/2018
Date Data Arrived at EDR: 11/14/2018
Date Made Active in Reports: 12/04/2018
Number of Days to Update: 20
Source: Department of Energy & Environmental Protection
Telephone: 860-424-3375
Last EDR Contact: 11/14/2018
Next Scheduled EDR Contact: 02/25/2019
Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information
Hazardous waste manifest information.

Date of Government Version: 12/31/2017
Date Data Arrived at EDR: 07/13/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

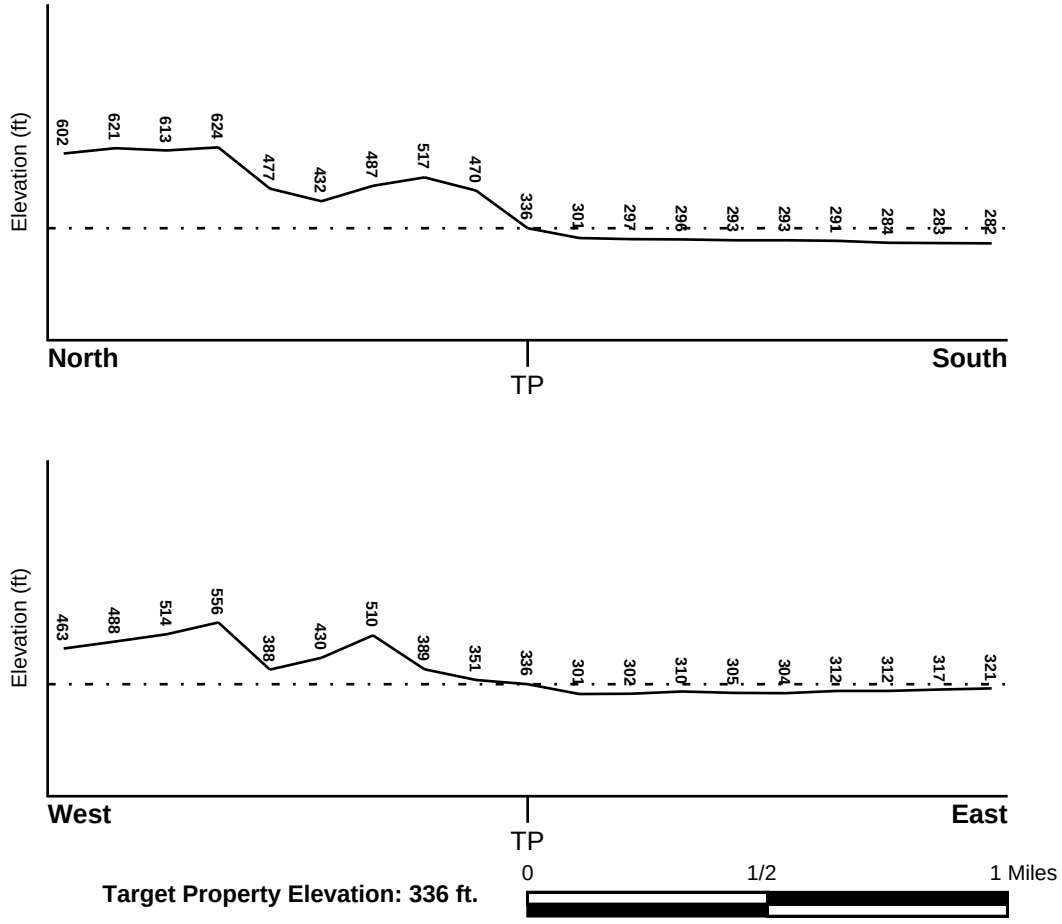
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile South
Site Name:	Van Der Horst Corporation Of America
Site EPA ID Number:	CAD020159166
Surficial Aquifer Flow Dir.:	VARIABLE. A FLOW TO THE S AND SE HAS BEEN IDENTIFIED DURING FORMER INVESTIGATIONS. MORE RECENT INVESTIGATIONS IDENTIFIED A FLOW TO THE E.
Measured Depth to Water:	28 feet to 38 feet.
Hydraulic Connection:	Aquifer interconnections exist within 2 miles of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
