

## Los Angeles General Medical Center (LAGMC) Metrolink Commuter Rail Station Project

### Overview

Metro has a plan to make it easier to get around, which includes projects to improve transit access across Los Angeles County. The Los Angeles General Medical Center (LAGMC) Metrolink Commuter Rail Station Project will provide direct commuter rail access to the largest essential medical center in LA County and enhance regional mobility for eastside communities including Boyle Heights, Lincoln Heights, El Sereno, and East LA.

The LAGMC Metrolink Commuter Rail Station Project will be located adjacent to the LAGMC Bus Station on the El Monte Busway along the I-10 freeway, with direct access to Pomeroy Avenue and the surrounding neighborhood. The station's area is the destination to a high concentration of essential workers, patients, and local businesses, and currently faces significant traffic congestion and limited transit access.

### Proposed Project

A feasibility study was completed in July 2022 that evaluated the potential for the new station to improve mobility and transit access. As a result of the study, Metro is advancing plans to construct a new Metrolink station to service the San Bernardino Line. The project includes a pedestrian bridge with stairs and an elevator, along with a street-level crossing to ensure safe and convenient passenger access to the station.

Metro is completing technical and environmental studies of the proposed LAGMC Metrolink Commuter Rail Station Project. These studies focus on air quality, noise and vibration, historic resources, hazardous materials, and traffic impacts.

### Project Funding

This current planning phase of the project is funded with LA Metro local Measure R sales tax dollars. At this time, funding for construction has not been identified or secured.

Metro is actively sharing the results of the studies with the community. The public is encouraged to participate in the robust outreach process in Winter 2025/2026.
